Each volume of the Dictionary of World Biography contains 250 entries on the lives of the individuals who shaped their times and left their mark on world history. This is not a who's who. Instead, each entry provides an in-depth essay on the life and career of the individual concerned. Essays commence with a quick reference section that provides basic facts on the individual's life and achievements. The extended biography places the life and works of the individual within an historical context, and the summary at the end of each essay provides a synopsis of the individual's place in history. All entries conclude with a fully annotated bibliography.

When the discovery of the Higgs Boson at CERN hit the headlines in 2012, the world was stunned by this achievement of modern science. Less well appreciated, however, were the many ways in which this benefited wider society. The Large Hadron Collider — The Greatest Adventure in Town charts a path through the cultural, economic and medical gains of modern particle physics. It illustrates these messages through the ATLAS experiment at CERN, one of the two big experiments which found the Higgs particle. Moving clear of in-depth physics analysis, it draws on the unparalleled curiosity about particle physics aroused by the Higgs discovery, and relates it to developments

familiar in the modern world, including the Internet, its successor "The Grid", and the latest cancer treatments. In this book, advances made from developing the 27 kilometre particle accelerator and its detectors are presented with the benefit of first hand interviews and are extensively illustrated throughout. Interviewees are leading physicists including successive heads of ATLAS, a top historian of science, a highly original economic strategist, a Nobel Prize-winning geneticist and President of the Royal Society in London, and experts in many other fields. These informative and entertaining insights provide both specialists and non-specialists alike with a unique window into the world of modern international research and its often surprising consequences, as exemplified by the ATLAS experiment. The narrative reveals the extent and style of international collaboration necessary to achieve success, and how big companies as well as start-ups enhance their products in the process.

“ I believe those of us with Asperger ’ s are here for a reason, and we have much to offer. This book will help you bring out those gifts. ” In his bestselling memoir, Look Me in the Eye, John Elder Robison described growing up with Asperger ’ s syndrome at a time when the diagnosis didn ’ t exist. He was intelligent but socially isolated; his talents won him jobs with toy makers and rock bands but did little to

endear him to authority figures and classmates, who were put off by his inclination to blurt out non sequiturs and avoid eye contact. By the time he was diagnosed at age forty, John had already developed a myriad of coping strategies that helped him achieve a seemingly normal, even highly successful, life. In *Be Different*, Robison shares a new batch of endearing stories about his childhood, adolescence, and young adult years, giving the reader a rare window into the Aspergian mind. In each story, he offers practical advice—for Aspergians and indeed for anyone who feels “different”—on how to improve the weak communication and social skills that keep so many people from taking full advantage of their often remarkable gifts. With his trademark honesty and unapologetic eccentricity, Robison addresses questions like:

- How to read others and follow their behaviors when in uncertain social situations
- Why manners matter
- How to harness your powers of concentration to master difficult skills
- How to deal with bullies
- When to make an effort to fit in, and when to embrace eccentricity
- How to identify special gifts and use them to your advantage

Every person, Aspergian or not, has something unique to offer the world, and every person has the capacity to create strong, loving bonds with their friends and family. *Be Different* will help readers and those they love find their path to success.

The latest investigation from acclaimed nuclear engineer and author James Mahaffey unearths forgotten nuclear endeavors throughout history that were sometimes hair-brained, often risky, and always fascinating. Whether you are a scientist or a poet, pro-nuclear energy or staunch opponent, conspiracy theorist or pragmatist, James Mahaffey's books have served to open up the world of nuclear science like never before. With clear explanations of some of the most complex scientific endeavors in history, Mahaffey's new book looks back at the atom's wild, secretive past and then toward its potentially bright future. Mahaffey unearths lost reactors on far flung Pacific islands and trees that were exposed to active fission that changed gender or bloomed in the dead of winter. He explains why we have nuclear submarines but not nuclear aircraft and why cold fusion doesn't exist. And who knew that radiation counting was once a fashionable trend? Though parts of the nuclear history might seem like a fiction mash-up, where cowboys somehow got a hold of a reactor, Mahaffey's vivid prose holds the reader in thrall of the infectious energy of scientific curiosity and ingenuity that may one day hold the key to solving our energy crisis or sending us to Mars.

The Large Hadron Collider Routledge

Provides an overview of Fiber Bragg Gratings (FBGs), from fundamentals to applications Evaluates the advantages and disadvantages of particular applications, methods and techniques Contains new chapters on sensing, femtosecond laser writing of FBGs and poling of glass and optical fibers Includes a special version of the photonic simulator PicWave(tm), allowing the reader to make live simulations of many of the example devices presented in the book. This fully revised, updated and expanded second edition covers the substantial advances in the manufacture and use of FBGs in the years since the publication of the pioneering first edition. It presents a comprehensive treatise on FBGs and addresses issues such as the merits of one solution over another; why particular fabrication methods are preferred; and what advantages a user may gain from certain techniques. Beginning with the principles of FBGs, the book progresses to discuss photosensitization of optical fibers, Bragg grating fabrication and theory, properties of gratings, specific applications, sensing technology, glass poling, advances in femtosecond laser writing of Bragg gratings and FBG measurement techniques. In addition to material on telecommunications usage of FBGs, application areas such as fiber lasers and sensors are addressed in greater detail. This special version of Picwave is limited to modelling only the passive fibre devices covered in this book. However the full PicWave package is capable of modelling other non-linear and active devices such as laser diodes and SOAs as discussed in Chapter 8. More information about PicWave can be found at www.photond.com/products/picwave.htm. In addition to researchers, scientists, and graduate students, this book will be of interest to industrial practitioners in the field of fabrication of fiber optic materials and devices. Raman Kashyap, Canada Research Chair holder on Future Photonics Systems, and Professor at École Polytechnique, University of Montréal since 2003, has researched optical fibers and devices for over 30 years. He pioneered the fabrication of FBGs and applications in telecommunications and photonics. Provides an overview of Fiber Bragg Gratings (FBGs),

The Adventures of Mademoiselle Mac 2-Book Bundle World Scientific

In recent years, animals have entered the focus of the social and cultural sciences, resulting in the emergence of the new field of human – animal studies. This book investigates the relationships

between humans and animals, paying particular attention to the role of affect, space, and animal subjectivity in diverse human – animal encounters. Written by a team of international scholars, contributions explore current debates concerning animal representation, performativity, and relationality in various texts and practices. Part I explores how animals are framed as affective, through four case studies that deal with climate change, human – bovine relationships, and human – horse interaction in different contemporary and historical contexts. Part II expands on the issue of relationality and locates encounters within place, mapping the different spaces where human – animal encounters take place. Part III then examines the construction of animal subjectivity and agency to emphasize the way in which animals are conscious and sentient beings capable of experiencing feelings, emotions, and intentions, and active agents whose actions have meaning for the animals themselves. This book highlights the importance of the ways in which affect enables animal agency and subjectivity to emerge in encounters between humans and animals in different contexts, leading to different configurations. It contributes not only to debates concerning the role of animals in society but also to the epistemological development of the field of human – animal studies.
