 Math Antics - Long Division with 2-Digit Divisors  
Systems of Equations - Reversing Digits Word Problem #1 - Quick Explanation!  
 $0 \times 3 = 0$  (same number twice)  
 $1 \times 3 = 3$  (same number twice)  
 Therefore the third number must be 9 ( $5 + 4$ ) because  $6 + 5$  and  $6 + 4$  are both too big. The fourth number in the 4-figure

number cannot be 5 as  $5 \times 3 = 15$  (repeat digit 5). The fourth number also cannot be 6 as then we would get 8 twice, so it must be 4.

may vary slightly due to rounding. In a random sample of 63 professional actors, it was found that 40 were extroverts. (a) Let  $p$  represent the proportion of all actors who are extroverts. Find a point estimate for  $p$ . (Round your answer to four decimal places.)

### The Four Digits Problem Answers 1 50

Four fours - Wikipedia

Four fours is a mathematical

puzzle. The goal of four fours is to find the simplest mathematical expression for every whole number from 0 to some maximum, using only common mathematical symbols and the digit four (no other digit is allowed). Most versions of four fours require that each expression have exactly four fours, but some variations require that each expression have the minimum number of fours. This game requires skill. The first printed occurrence of the specific problem of four fours

Let  $x$  = one 's digit and  $t$  =  
ten 's digit. Sentence: The  
sum of the digits of a two-digit  
number is 11.  $x + t = 11$ .

Isolate variable  $x$ .  $x = 11 - t$   
(equation 1) Step 2: Convert  
digits to number. Original  
number =  $t \times 10 + x$ .

Interchanged number =  $x \times$   
 $10 + t$ .
