How to Read a History Book Univ of California Press
Over the centuries, researchers have found bones and artifacts proving that humans like us have existed for millions of years; the author argues, however, that mainstream science has suppressed these facts and that prejudices based on current scientific theory act as a "knowledge filter," giving us a picture of prehistory that is largely incorrect. **Forbidden Archeology** Henry Holt and Company Man, through many religious indoctrinations, has a distorted belief of who and what God is. The "gods" were originally an advance race of extraterrestrial beings who infiltrated this third dimensional reality to colonize earth and subjugate humanity. While they were here, these "gods" interbreed with a specific group of people creating a bloodline of powerful men and women, who are the unseen hand behind the world government. By creating conflict through religious and political beliefs, indoctrinating us with a false education, and by propagating a "Snitch Society" and creating what is known as Matrix- an illusionary world- this bloodline has

manipulated humanity into becoming virtual slaves. Chapters Include: Uncovering the Gods; the Serpent Gods; the Draconian Gods; the Luciferian Bloodline and their Secret Covenant; Lucifer; Molech/Molach; Noah/Nimrod; Jesus and Christianity; Manna; The Matrix; Mind Manipulation, and Education; the Snitch Society and the Prison Industrial Complex; Freedom: The Divinity Within. Thom Hartmann, the most popular progressive radio host in America and a New York Times bestselling author, looks at the history of the battle against oligarchy in America—and how we can win the latest round. Billionaire oligarchs want to own our republic, and they're nearly there thanks to legislation and Supreme Court decisions that they have essentially bought. They put Trump and his political allies into office and support a vast network of think tanks, publications, and social media that every day push our nation closer and closer to police-state tyranny. The United States was born in a struggle against the oligarchs of the British aristocracy, and ever since then the history of America has been one of dynamic tension between democracy and oligarchy. And much like the shock of the 1929 crash woke America up to glaring inequality and the ongoing theft of democracy by that generation's oligarchs, the coronavirus pandemic of 2020 has laid bare how extensively oligarchs have looted our nation's economic system, gutted governmental institutions, and stolen the wealth of the former middle class. Thom Hartmann traces the history of this struggle against oligarchy from America's founding to the United States' war with the feudal Confederacy to President Franklin Roosevelt's struggle against "economic royalists," who wanted to block the New Deal. In each of those cases, the oligarchs lost the battle. But with increasing right-wing control of the media, unlimited campaign contributions, and a conservative takeover of the judicial system, we're at a crisis point. Now is the time for action, before we flip into tyranny. We've beaten the oligarchs before, and we can do it again. Hartmann lays out practical measures we can take to break up media monopolies, limit the influence of money in politics, reclaim the wealth stolen over decades by the

oligarchy, and build a movement that will return control of America to We the People.

Named a Best Book of the Year by NPR and Science Friday A quest to explore some of the most spectacular ancient cities in human history—and figure out why people abandoned them. In *Four Lost Cities*, acclaimed science journalist Annalee Newitz takes readers on an entertaining and mind-bending adventure into the deep history of urban life. Investigating across the centuries and around the world, Newitz explores the rise and fall of four ancient cities, each the center of a sophisticated civilization: the Neolithic site of Çatalhöyük in Central Turkey, the Roman vacation town of Pompeii on Italy's southern coast, the medieval megacity of Angkor in Cambodia, and the indigenous metropolis Cahokia, which stood beside the Mississippi River where East St. Louis is today. Newitz travels to all four sites and investigates the cutting-edge research in archaeology, revealing the mix of environmental changes and political turmoil that doomed these ancient settlements. Tracing the early development of urban planning, Newitz also introduces us to the often anonymous workers—slaves, women, immigrants, and manual laborers—who built these cities and created monuments that lasted millennia. *Four Lost Cities* is a journey into the forgotten past, but, foreseeing a future in which the majority of people on Earth will be living in cities, it may also reveal something of our own fate.

A deconstruction of the modern history book as artifact, *How to Read a History Book* explains who writes history books, how the writers are trained, and why they write them. It also discusses genre, bias (political and otherwise) and how to read history books between the lines. Written for undergraduates, intro graduate students and anyone with an informed interest in the subject, *How to Read a History Book* demonstrates that, rather than being objects that fall from the sky, history books are actually socially-constructed artifacts reflecting all the contradictions of modern meritocratic capitalism. **Hidden Histories of the Dead** Harper Collins

Currently enrolling approximately 900,000 poor children each year, Head Start has served 25 million children and their families since it was established 44 years ago. Presidents and policymakers have embraced and scorned it. At times scientists have misguided it and the media has misunderstood it. Despite its longevity and renown, much of Head Start's story has never been disclosed to the general public. The Hidden History of Head Start is a detailed account of this remarkable program. Surveying projects that were forerunners of Head Start, its birth during the Johnson administration, its fate during the presidency of George W. Bush, and the many years between--as well as what the future may hold in store for Head Start--Edward Zigler and Sally Styfco offer an inside view of the program's decades of service, detailing the ever-changing waves of politics, ideology, science, media interest, and public mood that oftentimes threatened the program's very existence. Providing a balanced assessment of Head Start's effectiveness, which has been a matter of debate since its inception, the authors also strive to answer questions that continue to pervade discussions about the program and its future. For example, why is Head Start, a leader of early childhood services, still struggling to prove itself? Why does it serve such a narrow segment of the population? And how can Head Start continue its mission as universal preschool becomes a reality? The Hidden History of Head Start will be of great importance to those who shape Head Start's future, and to those who wish to develop, research, and implement new early childhood programs. Students, historians, and scholars in the fields of early intervention and developmental science, as well as policymakers, will find here an invaluable resource as well as a fascinating chronicle of one of the foremost social programs in US history.

Investigates and questions the scientific consensus on the origins of civilization Do we, the human species, really know who we are or where we came from or how we originated or our place in the cosmos? Or is much of what we have been taught wrong or misguided or possibly even blatant lies intended to keep people in power and everyone else in line? Exploring alternative theories on the establishment of society and civilization, Hidden History: Ancient Aliens and the Suppressed Origins of Civilization looks at a variety of dissenting, suppressed, and forbidden accounts of history and the origins of humanity. It takes a broad and inclusive survey of historical documents, various theories, and a wide array of perspectives to explore what conventional wisdom might have gotten right and wrong. The book serves as a useful introduction into the suppressed accounts of the origins of modern civilization. It combines cutting-edge science with metaphysical, spiritual, and even paranormal views, daring to ask whether there might be a better explanation for humanity's existence and the origins of civilization than the current scientific consensus. Hidden History looks at the multiverse and parallel dimensions, the ancient alien theory, metaphysics, and hypotheses beyond physical perception, the eleven dimensions of string theory, radio telescopes that penetrate to the event horizon of our universe, mathematical equations that take us where no one has gone before, and the world-wide sharing of experiences old and new that speak of long forgotten ancient mythologies that reveal historical truths. With more than 120 photos and graphics, this tome is richly illustrated. Its helpful bibliography provides sources for further exploration, and an extensive index adds to its usefulness. This fascinating book is a thorough investigation and examination of the mysteries surrounding early civilizations, their myths, legends, histories, monuments—and lasting legacies.

Popular progressive radio host and New York Times bestselling author Thom Hartmann reveals how and why attempts to implement affordable universal healthcare in the United States have been thwarted and what we can do to finally make it a reality. "For-profit health insurance is the largest con job ever

perpetrated on the American people—one that has cost trillions of dollars and millions of lives since the 1940s," says Thom Hartmann. Other countries have shown us that affordable universal healthcare is not only possible but also effective and efficient. Taiwan's single-payer system saved the country a fortune as well as saving lives during the coronavirus pandemic, enabling the country to implement a nationwide coronavirus test-and-contact-trace program without shutting down the economy. This resulted in just ten deaths, while more than 500,000 people have died in the United States. Hartmann offers a deep dive into the shameful history of American healthcare, showing how greed, racism, and oligarchic corruption led to the current "sickness for profit" system. Modern attempts to create versions of government healthcare have been hobbled at every turn, including Obamacare. There is a simple solution: Medicare for all. Hartmann outlines the extraordinary benefits this system would provide the American people and economy and the steps we need to take to make it a reality. It's time for America to join every industrialized country in the world and make health a right, not a privilege.

From 1932 to 1945, in a race to develop germ warfare capability for the Imperial Japanese military thousands of Japanese doctors, nurses and scientists willingly took part in what was known at the time as "the secret of secrets": horrifying experiments on innocent Chinese men, women and children, as well as experiments on American prisoners of war. An elite

group known as Unit 731, led by Dr Shiro Ishii (Japan's answer to Joseph Mengele), infected thousands of prisoners with virulent strains of typhoid, plague, cholera and other epidemic diseases. Germ warfare campaigns were launched against China, cities and towns were hit with biological bombs. Yet after the war, General Douglas MacArthur struck a deal with these doctors, shielding them from accountability for their crimes. Provocative, compelling and alarming, *A Plague Upon Humanity* exposes one of the most shameful chapters in human history — the story of Japan's deadly biological warfare programme, and how it was hidden from the history of World War Two.

A Best Book of 2021 by NPR and The Washington Post Part graphic novel, part memoir, *Wake* is an imaginative tour-de-force that tells the “powerful” (The New York Times Book Review) story of women-led slave revolts and chronicles scholar Rebecca Hall's efforts to uncover the truth about these women warriors who, until now, have been left out of the historical record. Women warriors planned and led revolts on slave ships during the Middle Passage. They fought their enslavers throughout the Americas. And then they were erased from history. *Wake* tells the “riveting” (Angela Y. Davis) story of Dr. Rebecca Hall, a historian, granddaughter of slaves, and a woman haunted by the legacy of slavery. The accepted history of slave revolts has always told her that enslaved women took a back seat. But Rebecca decides to look deeper, and her journey takes her through old court records, slave ship captain's logs, crumbling correspondence, and even the forensic evidence from the bones of enslaved women from the “negro burying ground” uncovered in Manhattan. She finds women warriors everywhere. Using a “remarkable blend of passion and fact, action and reflection” (NPR), Rebecca constructs the likely pasts of Adono and Alele, women rebels who fought for freedom during the Middle Passage, as well as the stories of women who led slave revolts in Colonial New York. We also follow Rebecca's own story as the legacy of slavery shapes her life, both during her time as a successful attorney and later as a historian seeking the past that haunts her. Illustrated beautifully in black and white, *Wake* will take its place alongside classics of the graphic novel genre, like Marjane Satrapi's *Persepolis* and Art Spiegelman's *Maus*. This story of a personal and national legacy is a powerful reminder that while the past is gone, we still live in its wake.

A proposal to redefine design in a way that not only challenges the field's dominant paradigms but also changes the practice of design itself. In *Critical Fabulations*, Daniela Rosner proposes redefining design as investigative and activist, personal and culturally situated, responsive and responsible. Challenging the field's dominant paradigms and reinterpreting its history, Rosner wants to change the way we historicize the practice, reworking it from the inside. Focusing on the development of computational systems, she takes on powerful narratives of innovation and technology shaped by the professional expertise that has become integral to the field's mounting status within the new industrial economy. To do so, she intervenes in legacies of design, expanding what is considered “design” to include long-silenced narratives of practice, and enhancing existing design methodologies based on these rediscovered inheritances. Drawing on discourses of feminist technoscience, she examines craftwork's contributions to computing innovation—how craftwork becomes hardware manufacturing, and how hardware manufacturing becomes craftwork.

“The best all-around study of the American cowboy ever written. Every page crackles with keen analysis and vivid prose about the Old West. A must-read!” — Douglas Brinkley, author of *The Wilderness Warrior: Theodore Roosevelt and the Crusade for America* The open-range cattle era lasted barely a quarter century, but it left America irrevocably changed. *Cattle Kingdom* reveals how the West rose and fell, and how its legacy defines us today. The tale takes us from dust-choked cattle drives to the unlikely splendors of boomtowns like Abilene, Kansas, and Cheyenne, Wyoming. We meet a diverse cast, from cowboy Teddy Blue to failed rancher and future president Teddy Roosevelt. This is a revolutionary new appraisal of the Old West and the America it made. “Knowlton writes well about all the fun stuff: trail drives, rambunctious cow towns, gunfights and range wars . . . [He] enlists all of these tropes in support of an intriguing thesis: that the romance of the Old West arose upon

the swelling surface of a giant economic bubble . . . *Cattle Kingdom* is *The Great Plains* by way of *The Big Short*.” — Wall Street Journal “Knowlton deftly balances close-ups and bird's-eye views. We learn countless details . . . More important, we learn why the story played out as it did.” — New York Times Book Review “The best one-volume history of the legendary era of the cowboy and cattle empires in thirty years.” — True West

How did one of the world's “buzzy hotspots” (Fodor's 2013) become one of the top ten places to avoid (Fodor's 2018)? Precariously positioned between China and India, Burma's population has suffered dictatorship, natural disaster, and the dark legacies of colonial rule. But when decades of military dictatorship finally ended and internationally beloved Nobel laureate Aung San Suu Kyi emerged from long years of house arrest, hopes soared. World leaders such as Barack Obama ushered in waves of international support. Progress seemed inevitable. As historian, former diplomat, and presidential advisor, Thant Myint-U saw the cracks forming. In this insider's diagnosis of a country at a breaking point, he dissects how a singularly predatory economic system, fast-rising inequality, disintegrating state institutions, the impact of new social media, the rise of China next door, climate change, and deep-seated feelings around race, religion, and national identity all came together to challenge the incipient democracy. Interracial violence soared and a horrific exodus of hundreds of thousands of Rohingya refugees fixed international attention. Myint-U explains how and why this happened, and details an unsettling prognosis for the future. Burma is today a fragile stage for nearly all the world's problems. Are democracy and an economy that genuinely serves all its people possible in Burma? In clear and urgent prose, Myint-U explores this question—a concern not just for the Burmese but for the rest of the world—warning of the possible collapse of this nation of 55 million while suggesting a fresh agenda for change.

A magnificent work of original research that unravels history through textiles and cloth—how we make it, use it, and what it means to us. How is a handmade fabric helping save an ancient forest? Why is a famous fabric pattern from India best known by the name of a Scottish town? How is a Chinese dragon robe a diagram of the whole universe? What is the difference between how the Greek Fates and the Viking Norns used threads to tell our destiny? In *Fabric*, bestselling author Victoria Finlay spins us round the globe, weaving stories of our relationship with cloth and asking how and why people through the ages have made it, worn it, invented it, and made symbols out of it. And sometimes why they have fought for it. She beats the inner bark of trees into cloth in Papua New Guinea, fails to handspin cotton in Guatemala, visits tweed weavers at their homes in Harris, and has lessons in patchwork-making in Gee's Bend,

Alabama - where in the 1930s, deprived of almost everything they owned, a community of women turned quilting into an art form. She began her research just after the deaths of both her parents —and entwined in the threads she found her personal story too. Fabric is not just a material history of our world, but Finlay's own journey through grief and recovery.
