But Raskin goes afield, I think, in the latter half of the book. He proposes an entirely new interface for PCs--one that dispenses with file names, directory structures and applications. I'm sure we all agree that the current Windows interface is far from ideal or humane, confusing untold millions and making work more difficult than necessary.

The Humane Interface: New Directions for Designing Interactive Systems. The honeymoon with digital technology is over: millions of users are tired of having to learn huge, arcane programs to perform the simplest tasks; fatigued by the pressure of constant upgrades, and have had enough of system crashes. In The Humane Interface, Jef Raskin -- the legendary, controversial creator of the original Apple Macintosh project -- shows that there is another path.
