A. K. Larkwood's *The Unspoken Name* is a stunning debut fantasy about a young priestess sentenced to die, who at the last minute escapes her fate; only to become an assassin for the wizard who saved her. What if you knew how and when you will die? Csorwe does—she will climb the mountain, enter the Shrine of the Unspoken, and gain the most honored title: sacrifice. But on the day of her foretold death, a powerful mage offers her a new fate. Leave with him, and live. Turn away from her destiny and her god to become a thief, a spy, an assassin—the wizard's loyal sword. Topple an empire, and help him reclaim his seat of power. But Csorwe will soon learn—gods remember, and if you live long enough, all debts come due. “ In the vein of Le Guin's magnificent *Tombs of Atuan*—if Arha the Eaten One got to grow up to be a swordswoman mercenary in thrall to her dubious wizard mentor. I love this book so much.”—Arkady Martine, author of *A Memory Called Empire* "I cannot recommend it enough." -- Tamsyn Muir, author of *Gideon the Ninth* At the Publisher's request, this title is being sold without

Emergency Response Guidebook [Phoenix, Ariz.] : United States Department of the Interior, Division of Education, Bureau of Indian Affairs
From language creator David J. Peterson comes a creative guide to language construction, offering an overview of language creation, covering its history from Tolkien's creations and Klingon to today's thriving global community of conlangers. He provides the essential tools necessary for inventing and evolving new languages, using examples from a variety of languages including his own creations.

Stamped from the Beginning OUP Oxford
"Toki Pona was my philosophical attempt to understand the meaning of life in 120 words....I first published my micro-language on the Web in 2001....In this book, I hope to present the language in its completed form."--From the preface.

An Introduction to Language and Linguistics State University of New York Press
Written by the creator of the Unicon programming language, this book will show you how to implement programming languages to reduce the time and cost of creating applications for new or specialized areas of computing Key Features Reduce development time and solve pain points in your application domain by building a custom programming language Learn how to create parsers, code generators, file readers, analyzers, and interpreters Create an alternative to frameworks and libraries to solve domain-specific problems Book Description The need for different types of computer languages is growing rapidly and developers prefer creating domain-specific languages for solving specific application domain problems. Building your own programming language has its advantages. It can be your antidote to the ever-increasing size and complexity of software. In this book, you'll start with implementing the frontend of a compiler for your language, including a

lexical analyzer and parser. The book covers a series of traversals of syntax trees, culminating with code generation for a bytecode virtual machine. Moving ahead, you'll learn how domain-specific language features are often best represented by operators and functions that are built into the language, rather than library functions. We'll conclude with how to implement garbage collection, including reference counting and mark-and-sweep garbage collection. Throughout the book, Dr. Jeffery weaves in his experience of building the Unicon programming language to give better context to the concepts where relevant examples are provided in both Unicon and Java so that you can follow the code of your choice of either a very high-level language with advanced features, or a mainstream language. By the end of this book, you'll be able to build and deploy your own domain-specific languages, capable of compiling and running programs. What you will learn Perform requirements analysis for the new language and design language syntax and semantics Write lexical and context-free grammar rules for common expressions and control structures Develop a scanner that reads source code and generate a parser that checks syntax Build key data structures in a compiler and use your compiler to build a syntax-coloring code editor Implement a bytecode interpreter and run bytecode generated by your compiler Write tree traversals that insert information into the syntax tree Implement garbage collection in your language Who this book is for This book is for software developers interested in the idea of inventing their own language or developing a domain-specific language. Computer science students taking compiler construction courses will also find this book highly useful as a practical guide to language implementation to supplement more theoretical textbooks. Intermediate-level

knowledge and experience working with a high-level language such as Java or the C++ language are expected to help you get the most out of this book.

Issued for use as a kit, consisting of 4 components, tracks articulation skills from preschool through primary and secondary school years and into young adulthood.

Understanding Construction Drawings SUNY Press

The National Book Award winning history of how racist ideas were created, spread, and deeply rooted in American society. Some Americans insist that we're living in a post-racial society. But racist thought is not just alive and well in America -- it is more sophisticated and more insidious than ever. And as award-winning historian Ibram X. Kendi argues, racist ideas have a long and lingering history, one in which nearly every great American thinker is complicit. In this deeply researched and fast-moving narrative, Kendi chronicles the entire story of anti-black racist ideas and their staggering power over the course of American history. He uses the life stories of five major American intellectuals to drive this history: Puritan minister Cotton Mather, Thomas Jefferson, abolitionist William Lloyd Garrison, W.E.B. Du Bois, and legendary activist Angela Davis. As Kendi shows, racist ideas did not arise from ignorance or hatred. They were created to justify and rationalize deeply entrenched discriminatory policies and the nation's racial inequities. In shedding light on this history, *Stamped from the Beginning* offers us the tools we need to expose racist thinking. In the process, he gives us reason to hope.

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature?

Does the identification number 1035 indicate ethane or butane?

What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take?

Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

Advanced Language Construction Tor Books

An essential and very readable resource for conlangers and writers who want to create a non-European world, and anyone who wants to know more about our planet's leading civilization. A concise but meaty overview of the history, philosophy, and literature of China, and much more: clothing, architecture, technology, cosmology, medicine, cuisine, and more. Plus grammatical sketches of both Mandarin and Old Chinese, and a discussion of the writing system. The history and literature sections are written for people interested in the Chinese languages, with key terms in both pinyin and hanzi.

[The Construction of Space in Early China](#) Createspace Independent Publishing Platform

The sequel to the Language Construction Kit: learn more about constructed languages and about linguistics: logic, pidgins and creoles, sign languages, the linguistic life cycle, and a meaty step-by-step survey of morphosyntax. Create detailed and plausible languages for RPGs, fantasy and science fiction, movies, or video games... or just learn more about how languages work with the same accurate yet fun approach as the original LCK.

[From Elvish to Klingon](#) Penguin Books

This highly successful text has long been considered the standard introduction to the practical analysis of English sentence structure. It covers key concepts such as constituency, category and functions, and also utilises tree diagrams throughout to help the reader

visualise the structure of sentences. In this fourth edition, *Analysing Sentences* has been thoroughly revised and now features a brand new companion website with additional activities and exercises for students and an answer book for the in-text exercises for professors. The extra activities on the website give students practice in identifying syntactic phenomena in running text and will help to deepen understanding of this topic. Accessible and clear, this book is the perfect textbook for readers coming to this topic for the first time. Featuring many in-text, end-of-chapter and Further Exercises, it is suitable for self-directed study as well as for use as core reading on courses.

It's the 50th century. Socionomics makes the fifty human worlds of the Incatena prosperous and stable, if a bit raucous on Saturday nights. But socionomics doesn't cover crises, such as the dictatorship that's taken over Okura, or the unscrupulous tycoon who's plotting something over on New Bharat. For that we have Diplomatic Agents. Like Morgan. Is Morgan up to the task? The boss isn't sure. The station AI is doubtful. But our best Agents are out of town; time to see what Morgan can do. "A science fiction comedy, set in a future where the speed of light is respected, though grudgingly, and lives are measured in centuries."

[Writing and Authority in Early China](#) Independently Published

Here is the captivating story of humankind's enduring quest to build a better language—and overcome the curse of Babel. Just about everyone has heard of Esperanto, which was nothing less than one man's attempt to bring about world peace by means of linguistic solidarity. And every Star Trek fan knows about Klingon. But few people have heard of Babm, Blissymbolics, Loglan (not to be confused with Lojban), and the nearly nine hundred other invented languages that represent the hard work, high hopes, and full-blown delusions of so many misguided souls over the centuries. With intelligence and humor, Arika Okrent has written a truly original and enlightening book for all word freaks, grammar geeks, and plain old language lovers.

`Warning: The following stories contain nudity, violence, pianos, amazingly radiant verbalising, venomous weather, and funny clanking noises in the tiled washrooms of the nation. Viewer discretion is advised.'

Understanding MARC Bibliographic Bold Type Books

We all know the basics of punctuation. Or do we? A look at most neighborhood signage tells a different story. Through sloppy usage and low standards on the internet, in email, and now text messages, we have made proper punctuation an endangered species. In *Eats, Shoots & Leaves*, former editor Lynne Truss dares to say, in her delightfully urbane, witty, and very English way, that it is time to look at our commas and semicolons and see them as the wonderful and necessary things they are. This is a book for people who love punctuation and get upset when it is mishandled. From the invention of the question mark in the time of Charlemagne to George Orwell shunning the semicolon, this lively history makes a powerful case for the preservation of a system of printing conventions that is much too subtle to be mucked about with.

The Language Construction Kit Random House

Based on the #1 New York Times bestseller *The 5 Love Languages*® (over 12 million copies sold), Dramatically improve workplace relationships simply by learning your coworkers' language of appreciation. This book will give you the tools to improve staff morale, create a more positive workplace, and increase employee engagement. How? By teaching you to effectively communicate authentic appreciation and encouragement to employees, co-workers, and leaders. Most relational problems in organizations flow from this question: do people feel appreciated? This book will help you answer "Yes!" A bestseller—having sold over 300,000 copies and translated into 16 languages—this book has proven to be effective and valuable in diverse settings. Its principles about human behavior have helped businesses, non-profits, hospitals, schools, government agencies, and organizations with remote workers. PLUS! Each book contains a free access code for taking the online *Motivating By Appreciation* (MBA) Inventory (does not apply to purchases of used books). The assessment identifies a person's preferred languages of appreciation to help you apply the book. When supervisors and colleagues understand their coworkers' primary and secondary languages, as well as the specific actions they desire, they can effectively communicate authentic appreciation, thus creating healthy work relationships and

raising the level of performance across an entire team or organization. Take your team to the next level by applying *The 5 Languages of Appreciation in the Workplace*.
