1827 -- During a trek to Loch Ness, Scotland, a young Charles Darwin encounters a mysterious and terrifying creature that provides a spark for his evolutionary theory. 2013 -- Almost two hundred years later and across the Channel in Paris, the Eiffel Tower is under attack. Only through detective work, intuition, and a judicious application of high-tech weaponry does former Army combat engineer Tyler Locke prevent a massacre. What Tyler doesn't know is that the assault is just the beginning of a conspiracy so dark that it not only threatens the lives of those he loves, but could also ignite World War III. Racing against time to uncover Darwin's centuries-old secret, he must solve a series of cryptic clues to find a manuscript that has been so cleverly hidden it hasn't been seen since the Victorian age. Tyler's quest takes him from the bustling tourist hotspots of Seattle to the splendor of Versailles to

Read the book that inspired the BLOCKBUSTER MOVIE starring Jason Statham, Li Bingbing, Rainn Wilson, Ruby Rose, Winston Chao, and Cliff Curtis! Seven years ago, and seven miles below the surface of the Pacific Ocean, Dr. Jonas Taylor encountered something that changed the course of his life. Once a Navy deep-sea submersible pilot, now a marine paleontologist, Taylor is convinced that a remnant population of Carcharodon megalodon -- prehistoric sharks growing up to 70 feet long, that subsisted on whales -- lurks at the bottom of the Mariana Trench. When offered the opportunity to return to those crushing depths in search of the Megs, Taylor leaps at the chance... but the quest for scientific knowledge (and personal vindication) becomes a desperate fight for survival, when the most vicious predator that the earth has ever known is freed to once-again hunt the surface.

This book describes the development of ocean sciences over the past 50 years, highlighting the contributions of the National Science Foundation (NSF) to the field's progress. Many of the individuals who participated in the exciting discoveries in biological oceanography, chemical oceanography, physical oceanography, and marine geology and geophysics describe in the book how the discoveries were made possible by combinations of insightful individuals, new technology, and in some cases, serendipity. In addition to describing the advance of ocean science, the book examines the institutional structures and technology that made the advances possible and presents visions of the field's future. This book is the first-ever documentation of the history of NSF's Division of Ocean Sciences, how the structure of the

division evolved to its present form, and the individuals who have been responsible for ocean sciences at NSF as "rotators" and career staff over the past 50 years.

SPECTATOR BOOKS OF THE YEAR
2015 Britain's empire has gone. Our manufacturing base is a shadow of its former self; the Royal Navy has been reduced to a skeleton. In military, diplomatic and economic terms, we no longer matter as we once did. And yet there is still one area in which we can legitimately claim superpower status: our popular culture. It is extraordinary to think that

one British writer, J. K. Rowling, has sold more than 400 million books; that Doctor Who is watched in almost every developed country in the world; that James Bond has been the central character in the longest-running film series in history; that The Lord of the Rings is the second best-selling novel ever written (behind only A Tale of Two Cities); that the Beatles are still the best-selling musical group of all time; and that only Shakespeare and the Bible have sold more books than Agatha Christie. To put it simply, no country on earth, relative to its size, has contributed more to the modern imagination. This is a book about the success and the meaning of Britain's modern popular culture, from Bond and the Beatles to heavy metal and Coronation Street, from the Angry Young Men to Harry Potter, from Damien Hirst to The X Factor.

A solid introduction to stable isotopes that can also be used as an instructive review for more experienced researchers and professionals. The book approaches the use of isotopes from the perspective of ecological and biological research, but its concepts can be applied within other disciplines. A novel, step-by-step spreadsheet modeling approach is also presented for circulating tracers in any ecological system, including any favorite system an ecologist might dream up while sitting at a computer. The author's humorous and lighthearted style painlessly imparts the principles of isotope ecology. The online material contains color illustrations, spreadsheet models, technical appendices, and problems and answers.

Tyler analyzes the Malayan Emergency of 1948-1960 focusing on the intelligence needs and methods of the British high commissioner, Sir Gerald Templer. He demonstrates the importance of information gathering and analysis in bringing about the ultimate British victory. Operational design is "a highly complex mental process that imagines the future, reflects on the past, and produces an understanding of both the problem and the optimal solution." Templer and his intelligence professionals did not—indeed could not—consciously use design as a methodology, they intuitively grasped and applied its essence.

This innovative study of racial upheaval and urban transformation in Baltimore, Maryland investigates the impact of "blockbusting" -- a practice in which real estate agents would sell a house on an

all-white block to an African American family with the aim of igniting a panic among the other residents. These homeowners would often sell at a loss to move away, and the real estate agents would promote the properties at a drastic markup to African American buyers. In this groundbreaking book, W. Edward Orser examines Edmondson Village, a west Baltimore rowhouse community where an especially acute instance of blockbusting triggered white flight and racial change on a dramatic scale. Between 1955 and 1965, nearly twenty thousand white residents, who saw their secure world changing drastically, were replaced by blacks in search of the American dream. By buying low and selling high, playing on the fears of whites and the needs of African Americans, blockbusters set off a series of events that Orser calls "a collective trauma whose significance for recent American social and cultural history is still insufficiently appreciated and understood." *Blockbusting in Baltimore* describes a widely experienced but little analyzed phenomenon of recent social history. Orser makes an important contribution to community and urban studies, race relations, and records of the African American experience.

With six Academy Awards, four entries on the American Film Institute's list of 100 greatest American movies, and more titles on the National Historic Register of classic films deemed worthy of preservation than any other director, Billy Wilder counts as one of the most accomplished filmmakers ever to work in Hollywood. Yet how American is Billy Wilder, the Jewish émigré from Central Europe? This book underscores this complex issue, unpacking underlying contradictions where previous commentators routinely smoothed them out. Wilder emerges as an artist

with roots in sensationalist journalism and the world of entertainment as well as with an awareness of literary culture and the avant-garde, features that lead to productive and often highly original confrontations between high and low.
