*International Guide to Foreign Currency Management* Springer

With the advent of the World Trade Organization and NAFTA, foreign exchange now impacts the corporate world as never before. Hedging currency risk - usually through the interbank network - is now a routine treasury function. However, midsized companies (up to \$100 million in annual sales) are often shut out of the interbank market because of cost and minimum size requirements. *Currency Risk Management: A Handbook for Financial Managers, Brokers, and Their Consultants* shows how to capture this business - from the basic concepts of foreign exchange to prospecting the corporate client. The author writes in an easy-to-read style and shows the finer points of foreign exchange and various exchange regimes recognized by the IMF. The reader will learn why exchange rates are a matter of government restrictions and controls as well as market price discovery.

The Rocky Mountains have cast their spell over the Courtlands, who are taking a family vacation before their daughter leaves for college. But when Caitlin and her younger brother, Sean, go out for an early morning run and only Sean returns, the mountains become as terrifying as they are majestic. Written with a precision that captures every emotion, every moment of fear, as each member of the family searches for answers, *Descent* races like an avalanche toward its heart-pounding conclusion. "Read this astonishing novel . . . The magic of his prose equals the horror of Johnston's story." —The Washington Post "A compelling thriller that is both creepy and literary . . . *Descent* is not just a mystery. It is an emotional story of evil, fear, acceptance and irony." —The Denver Post "What makes the novel unforgettable is its sense of character, its deliberate, unadorned prose and Johnston's unflinching exploration of human endurance, physical and psychological." —Miami Herald "A super-charged, addictive read." —The Missourian "An original and psychologically deep thriller." —Outside magazine "Outstanding . . . The days when you had to choose between a great story and a great piece of writing? Gone." —Esquire "[A] dazzling debut . . . Exquisitely crafted." —The Dallas Morning News "Incredibly powerful, richly atmospheric."

—Minneapolis Star Tribune " [An] engulfing thriller-cum-western. " —The New York Times Book Review  
" Brilliant . . . As gripping as any Everest expedition. " —Peter Heller, author of *The Dog Stars*

In this ambitious novel of madness and release, shortlisted for the Booker Prize, Doris Lessing imagines the fantastical "inner-space" life of an amnesiac. Charles Watkins, a Professor of Classics at Cambridge University, has suffered a breakdown, confined to a mental hospital as his friends and doctors attempt to bring him back to reality. But Watkins has embarked on a tremendous psychological adventure that takes him from a spinning raft in the Atlantic to a ruined stone city on a tropical island to an outer-space journey through singing planets. As he travels in his mind through memory and the farther reaches of imagination, his doctors try to subdue him with ever more powerful drugs in a competition for his soul. In this provocative novel, Lessing takes us on a harrowing voyage into the rarely glimpsed territory of the inner mind.

Americans are expressing deep concern about US dependence on petroleum, rising energy prices and the threat of climate change. Unlike the energy crisis of the 1970s, however, there is a lurking fear that, now, the times are different and the crisis may not easily be resolved. *The Long Descent* examines the basis of such fear through three core themes: Industrial society is following the same well-worn path that has led other civilizations into decline, a path involving a much slower and more complex transformation than the sudden catastrophes imagined by so many social critics today. The roots of the crisis lie in the cultural stories that shape the way we understand the world. Since problems cannot be solved with the same thinking that created them, these ways of thinking need to be replaced with others better suited to the needs of our time. It is too late for massive programs for top-down change; the change must come from individuals. Hope exists in actions that range from taking up a handicraft or adopting an "obsolete" technology, through planting an organic vegetable garden, taking charge of your own health care or spirituality, and building community. Focusing eloquently on constructive adaptation to massive change, this book will have wide appeal.

Users are increasingly interacting with machine learning (ML)-based curation systems. YouTube and Facebook, two of the most visited websites worldwide, utilize such systems to curate content for billions of users. Contemporary challenges such as fake news, filter bubbles, and biased predictions make the understanding of ML-based curation systems an important and timely

concern. Despite their political, social, and cultural importance, practitioners' framing of machine learning and users' understanding of ML-based curation systems have not been investigated systematically. This is problematic since machine learning - as a novel programming paradigm in which a mapping between input and output is inferred from data - poses a variety of open research questions regarding users' understanding. The first part of this thesis provides the first in-depth investigation of ML-based curation systems as socio-technical systems. The second part of the thesis contributes recommendations on how ML-based curation systems can and should be explained and audited. The first part analyses practitioners' framing of ML by examining how the term machine learning, ML applications, and ML algorithms are framed in tutorials. The thesis also investigates the beliefs that users have about YouTube and introduces a user belief framework of ML-based curation systems. Furthermore, it demonstrates how limited users' capabilities for providing input data for ML-based curation systems are. The second part evaluates different explanations of ML-based systems. This evaluation uncovered an explanatory gap between what is available to explain ML-based curation systems and what users need to understand such systems. Informed by this explanatory gap, the second part of this thesis demonstrates that audits of ML systems can be an important alternative to explanations. This demonstration of audits also uncovers a popularity bias enacted by YouTube's ML-based curation system. Based on these findings, the thesis recommends performing audits to ensure that ML-based systems act in the public's interest. UNIX for OpenVMS Users, Second Edition, is for users who are making the transition from OpenVMS to UNIX and provides a comprehensive comparison of commands and utilities. Starting from a working knowledge of OpenVMS, it takes an average user to a comparable knowledge of UNIX. It bridges the gap between OpenVMS and UNIX by explaining things in OpenVMS terms. The book begins with a tutorial discussing the concepts needed when working with UNIX and the common shell programs. Working into practical examples, the book shows simple daily tasks that map one-for-one from OpenVMS to UNIX. These include system access, file manipulation, text editing and mail. The examples provide commands that are as equivalent as possible, and point out subtle differences. Recent releases of OpenVMS and UNIX have added interfaces that are exactly the same between the operating systems, particularly POSIX and CDE. UNIX for OpenVMS Users, describes these interfaces briefly, mainly to reassure users how easy it can be to switch between the operating systems. Maps OpenVMS concepts onto UNIX Pertinent to all major versions of UNIX Covers latest version of OpenVMS and new features of UNIX, such as CDE

The visionary classic that traces out the twilight of the petroleum age In 2008, as the price of crude oil spiked to record levels, John Michael Greer's *The Long Descent* pushed past the stereotyped debates of the time to offer a harrowing but hopeful vision of the future of industrial society. As believers in perpetual progress insisted that something would turn up to replace depleting petroleum reserves, and believers in apocalypse insisted just as fervently that the spike in oil prices would send industrial society crashing down in ruin overnight, Greer's epochal book reframed the entire debate in terms of the great rhythm of rise and fall the marks the history of civilizations. *The Long Descent* traces out the ragged course of decline that has brought every previous civilization to its end, and is doing the same with ours. It takes the average civilization one to three hundred years to descend from its peak into a dark age out of which new civilizations will be born, and that same process is visibly under way in our own lives. The global challenges facing industrial civilization are not problems that we can solve, but predicaments that all of us must live with, as our societies stumble down the long slope to the deindustrial future. Much can still be done as the petroleum age winds down, and the interval between one spike in oil prices and the next offers opportunities that will no longer be available when the price of everything made from petroleum starts soaring again - as it will. *The Long Descent* offers crucial insights into what individuals, families, small groups, and local communities can do to brace themselves for the changes to come.

“ Heart-stopping and relentlessly gripping. Tabor takes us on an odyssey into unfathomable worlds beneath us, and into the hearts of rare explorers who will do anything to get there first. ” —Robert Kurson, author of *Shadow Divers* In 2004, two great scientist-explorers attempted to find the bottom of the world. American Bill Stone took on the vast, deadly Cheve Cave in southern Mexico. Ukrainian Alexander Klimchouk targeted Krubera, a freezing nightmare of a supercave in the war-torn former Soviet republic of Georgia. Both men spent months almost two vertical miles deep, contending with thousand-foot drops, raging whitewater rivers, monstrous waterfalls, mile-long belly crawls, and the psychological horrors produced by weeks in absolute darkness, beyond all hope of rescue. Based on his unprecedented access to logs and journals as well as hours of personal interviews, James Tabor has crafted a thrilling exploration of man ’ s timeless urge to discover—and of two extraordinary men whose pursuit of greatness led them to the heights of triumph and the depths of tragedy. *Blind Descent* is an unforgettable addition to the classic literature of true-life adventure, and a testament to human survival and endurance. “ Holds the reader to his seat, containing dangers aplenty with deadly falls, killer microbes, sudden burial, asphyxiation, claustrophobia, anxiety, and hallucinations far underneath the ground in a lightless world. Using a pulse-pounding narrative, this is tense real-life adventure pitting two master cavers mirroring the cold war with very uncommonly high stakes. ” —Publishers Weekly (starred review) “ A fascinating and informative introduction to the sport of cave diving, as well as a dramatic portrayal of a significant man-vs.-nature conflict. . . . What counts is Tabor ’ s knack for maximizing dramatic potential, while also managing to be informative and attentive to the major personalities associated with the most important cave explorations of the last two decades. ” —Kirkus Reviews

The South Downs is a mountain biker's paradise. Thousands of kilometres of well-maintained byways and bridleways can be combined to create seemingly inexhaustible route combinations. The 26 routes in this book are graded (blue, red and black) for a range of abilities, and grouped into 6 sections: The South Downs Way National Trail (the whole route described in 3 stages) and routes around Winchester, Chichester and Petersfield, Arundel and Worthing, Brighton and Lewes and Eastbourne. They range from 14km to 57km in length and up to 95% off road, providing plenty of challenge for any mountain biker. Many tracks traverse well-drained chalk downland, providing superlative off-road conditions for

much of the year. All routes are clearly illustrated on OS maps with numbered stages linking the route descriptions to maps. Extensive information is also included on facilities and services, including bike shops and mechanics, cafes, pubs and food shops, accommodation and transport links and tips on bike gear and preparation.

This book is a celebration of mountain huts, showcasing the the sheer variety and sometimes quirky nature of these buildings that allow walkers, trekkers and climbers to access remote corners of the mountains. Packed with entertaining stories that bring the places and people to life, it contains descriptions of the author's favourite huts in the Alps, along with suggestions for hut-to-hut tours of 3-13 days duration, including the Tour of Mont Blanc. It also traces the history of huts and how they have evolved from the most primitive of shelters to the often purpose-built, eco-friendly buildings of today. For the uninitiated, it unravels some of the mystery of huts and explains how to use them and what facilities to expect. Above all, it illustrates the way in which mountain huts can be truly sociable places, where like-minded people can spend a night or two in the most magical of locations and share a love of wild places.

In *Maya Political Science: Time, Astronomy, and the Cosmos*, Prudence M. Rice proposed a new model of Maya political organization in which geopolitical seats of power rotated according to a 256-year calendar cycle known as the May. This fundamental connection between timekeeping and Maya political organization sparked Rice's interest in the origins of the two major calendars used by the ancient lowland Maya, one 260 days long, and the other having 365 days. In *Maya Calendar Origins*, she presents a provocative new thesis about the origins and development of the calendrical system. Integrating data from anthropology, archaeology, art history, astronomy, ethnohistory, myth, and linguistics, Rice argues that the Maya calendars developed about a millennium earlier than commonly thought, around 1200 BC, as an outgrowth of observations of the natural phenomena that scheduled the movements of late Archaic hunter-gatherer-collectors throughout what became Mesoamerica. She asserts that an

---

understanding of the cycles of weather and celestial movements became the basis of power for early rulers, who could thereby claim "control" over supernatural cosmic forces. Rice shows how time became materialized—transformed into status objects such as monuments that encoded calendrical or temporal concerns—as well as politicized, becoming the foundation for societal order, political legitimization, and wealth. Rice's research also sheds new light on the origins of the Popol Vuh, which, Rice believes, encodes the history of the development of the Mesoamerican calendars. She also explores the connections between the Maya and early Olmec and Izapan cultures in the Isthmian region, who shared with the Maya the cosmovision and ideology incorporated into the calendrical systems.
