In *The Mind's Eye*, Oliver Sacks explores some of the most fundamental facets of human experience: how we see in three dimensions, how we represent the world internally when our eyes are closed, and the remarkable, unpredictable ways that our brains find new ways of perceiving that create worlds as complete and rich as the no-longer-visible world.

The Mind's Eye (book) - Wikipedia

This book, "*The Mind's Eye*", by Oliver Sacks, is fascinating, absorbing, and vastly entertaining. Like most of his other books, it is the true story of his personal experiences; this time, with his sight, along with his

neurological analysis of what was happening in his eye and in his brain.

In *The Mind's Eye*, Oliver Sacks tells the stories of people who are able to navigate the world and communicate with others despite losing what many of us consider indispensable senses and abilities: the power of speech, the capacity to recognize faces, the sense of three-dimensional space, the ability to read, the sense of sight. For all of these people, the challenge is to adapt to a radically new way of being in the world.
