I have adressed major performance issue in the Job Module and have documented these via movieclips to MS and delivered a 50GB customer db. Microsoft have restored 4 std. objects in this db and have confirmed that there is a number of performance issues and have created a internal hotfix request for the NAV Development Team to get this fixed.

While struggling with NAV/SQL performance issues for many years I scribbled down countless pages about various issues, learned by own experience or from colleagues, taken from numerous knowledgebase articles, whitepapers, etc. or heard in several webcasts.

If two DataItems are linked, then the field on the parent DataItem that links the two DataItems (the Reference Field on the DataItemLink property), must be part of the same Dynamics NAV key as the columns in the child DataItem. The SQL Server optimizer automatically chooses a covering index strategy whenever possible.
