any diver's bookshelf!
"Batteries last hours, books last decades. Get the print edition!" Since the early 1900s the United States Navy has produced the internationally-recognized bible for all recreational, commercial and military divers. Now with the new Revision 7 (Change A) the Navy has created the ultimate up-to-date reference book for the diver, covering every imaginable aspect of diving instruction and information in nearly 1,000 pages total (presented in two books). Easy to read, and as accessible to the novice as

it is to the expert, the Diving Manual contains an immense, detailed and deep body of knowledge unavailable elsewhere. The Manual consists of five volumes, spread over two books: Book 1 contains:
Volume 1 - Diving Principles and Policies (205 pages, 50 illustrations).
History of Diving -
Underwater Physics -
Underwater Physiology and Diving Disorders - Dive Systems - Dive Program Administration - Safe Diving Distances from Transmitting Sonar - References - Telephone Numbers - List of

Acronyms. Volume 2 - Air Diving Operations (319 pages, 82 illustrations).

Scuba divers are dying in caves, on wrecks, and in

open water. These are not it. These deaths are explorers pushing the boundaries of the known world, and they are not scientist seeking to prove new concepts and expand our understanding of the marine environment.

These are ordinary divers. The man buying a coffee ahead of us in the morning; the woman we see walking her dog on our street. Brothers, sisters, aunts and uncles. Someone's wife or husband, mom or dad.

Just regular people who are diving for the fun of

it. These deaths are tragic, life-altering, devastating, a terrible waste. Worst of all, they are totally unnecessary, a sad mistake and often completely avoidable. In *Staying Alive*, Steve Lewis tells us there are very few diving accidents. Most of the heart-breaking events claiming the lives of scores of recreational divers are mistakes that result from established limits being ignored. Lewis revisits the survival guidelines originally proposed by the

legendary Sheck Exley and shows us in eight straightforward steps how simple it is for sport and technical divers to avoid becoming a statistic.

Turning the Tide on Trash

McGraw Hill Professional

This book is not exactly a textbook or a manual giving divers D-I-Y advice on the specifics of technical diving, but it is essential reading for anyone wanting to venture beyond weekend-warrior status. While the six skills include some hard and fast physical guidelines, this book's

focus is on the things other diving texts leave out. Perfect reading material for any level of scuba diver: even those "not interested" in going tech.

Scientific Blue-water Diving

Written by two experts in diving physiology and medicine, this comprehensive resource will help you manage each stage of a dive more safely and successfully. Whether you're on the surface or bottom, in the descent or ascent, you'll know exactly what to do and when to do it. With information on everything from on-gassing and off-gassing to first response interventions for medical problems, Diving Science is as essential as a wetsuit for your next

NOAA Diving Manual
The book manages to combine humor, adventure, tragedy, triumph, heroism, and even some forays into the risqué ... while chronicling the careers of 20 enduring personalities that helped make diving what it is today. Some of those interviewed are retired now, one (author Peter Benchley of Jaws fame) recently passed away, and many are still making history through their ongoing work. It's quite a group. Consider that the lineup includes actress and Sea Hunt star Zale

Parry who also set the depth record for women divers back in 1954. Stan Waterman provides both the book's Foreword and a revealing insider look at his seven decades in diving. Living legend Bev Morgan pioneered the first dive training programs along with revolutionizing commercial diving equipment. His image in full hardhat dress also graces the book's cover. Morgan's candor and humor set the pace for the lively montage of dialogues to follow with Australian couple Ron and Valerie Taylor who rose to fame in the iconic shark	documentary film Blue Water, White Death. They are joined by others from diving's first generation including filmmaker Al Giddings (The Deep, Abyss, Titanic, etc.), retail pioneer and cameraman Chuck Nicklin (The Diving Locker), manufacturers Dick Bonin (Scubapro) and Bob Hollis (Oceanic), photography masters Ernie Brooks and Paul Humann, as well as deep ocean explorer Dr. Bob Ballard who discovered the wrecks of the Titanic, Bismarck, and PT-109. Diving's second generation of innovators includes cave explorer Wes	Skiles, filmmaker Mike deGruy, wreck explorer John Chatterton (of Shadow Divers fame), IMAX film producer Greg MacGillivray, and the dynamic husband/wife team of Howard and Michele Hall who seem to dominate the realm of documentary underwater films now (Island of the Sharks, Coral Reef Adventure, Deep Sea 3D). Last but not least, Stan Waterman talked Gilliam into sitting for an interview about his own amazing career and, typically, he shares a wicked sense of humor along with some biting perspective about

what it was like to champion new technologies and daring approaches to diving business when the sport's ultra-conservatives wanted to suppress nitrox, liveaboards, technical diving, diving computers, training methods, and honest journalism. Each chapter is a slice of human interest that lets the reader briefly pull back the curtain on the personal lives of diving's heroes and feel like they are part of the conversation. The full color book is lavishly illustrated with great photographs that capture each interviewee throughout their diving careers. It's a very personal journey and the reader will feel like they pulled up a chair and shared a cup of coffee around a table with each person. Gilliam enlisted help from other leading writers for some interviews he couldn't conduct himself and Fred Garth, Lina Hitchcock, Eric Hanauer, Douglas Seifert and Michel Gilbert & Danielle Alary all make significant contributions to round out the book. It's a massive volume, 8x11 inches in size, 496 pages, hard bound, and weighing in at a whopping eight pounds per copy.

"Turning the Tide on Trash ... is an interdisciplinary guide designed to provide maximum flexibility in the classroom." The curriculum guide is designed for use either as a primary tool, or to supplement work in other subject areas. Three teaching units develop concepts on 1) The definition, characteristics, and sources of marine debris; 2) The effects of marine debris; and 3) Developing solutions and spreading the word. Units contain questions regarding the concepts, background

information, 'Facts from the Deep', objectives, instructions on activities, vocabulary, materials, learning skills, duration (typically 40 minutes), necessary reproducibles, and procedures. Academic subject areas encompass art, language arts, mathematics, music, science and social studies. Guide appears to be directed to teachers of upper elementary and middle school students.
