Interdisciplinarity and Climate Change

For pathways to be truly sustainable and advance gender equality and the rights and capabilities of women and girls, those whose lives and well-being are at stake must be involved in leading the way. *Gender Equality and Sustainable Development* calls for policies, investments and initiatives in sustainable development that recognize women ' s knowledge, agency and decision-making as fundamental. Four key sets of issues - work and industrial production; population and reproduction; food and agriculture, and water, sanitation and energy provide focal lenses through which these challenges are considered. Perspectives from new feminist political ecology and economy are integrated, alongside issues of rights, relations and power. The book untangles the complex interactions between different

dimensions of gender relations and of sustainability, and explores how policy and activism can build synergies between them. Finally, this book demonstrates how plural pathways are possible; underpinned by different narratives about gender and sustainability, and how the choices between these are ultimately political. This timely book will be of great interest to students, scholars, practitioners and policy makers working on gender, sustainable development, development studies and ecological economics.

Interdisciplinarity and Climate Change is a major new book addressing one of the most challenging questions of our time. Its unique standpoint is based on the recognition that effective and coherent interdisciplinarity is necessary to deal with the issue of climate change, and the multitude of linked phenomena which both constitute and connect to it. In the opening chapter, Roy Bhaskar makes use of the extensive resources of critical realism to articulate a comprehensive framework for multidisciplinary, interdisciplinarity, transdisciplinarity and cross-disciplinary understanding, one which duly takes account of ontological as well as epistemological considerations. Many of the subsequent chapters seek to show how this

general approach can be used to make intellectual sense of the complex phenomena in and around the issue of climate change, including our response to it. Among the issues discussed, in a number of graphic and compelling studies, by a range of distinguished contributors, both activists and scholars, are: The dangers of reducing all environmental, energy and climate gas issues to questions of carbon dioxide emissions The problems of integrating natural and social scientific work and the perils of monodisciplinary tunnel vision The consequences of the neglect of issues of consumption in climate policy The desirability of a care-based ethics and of the integration of cultural considerations into climate policy The problem of relating theoretical knowledge to practical action in contemporary democratic societies *Interdisciplinarity and Climate Change* is essential reading for all serious students of the fight against climate change, the interactions between governmental bodies, and critical realism.

Students of Color and the Achievement Gap is a comprehensive, landmark analysis of an incontrovertible racialized reality in U.S. K-12 public education---the relentless achievement gap between low-socioeconomic students of color and their economically advantaged White counterparts. Award winning author and scholar Richard Valencia provides an authoritative and systemic treatment of the achievement gap, focusing on Black and Latino/Latina students. He examines the societal and educational factors that help to create and maintain the achievement gap by drawing from critical race theory, an asset-based perspective and a systemic inequality approach. By showing how racialized opportunity structures in society and schools

ultimately result in racialized patterns of academic achievement in schools, Valencia shows how the various indicators of the achievement gap are actually symptoms of the societal and school quality gaps. Following each of these concerns, Valencia provides a number of reform suggestions that can lead to systemic transformations of K-12 education. *Students of Color and the Achievement Gap* makes a persuasive and well documented case that school success for students of color, and the empowerment of their parents, can only be fully understood and realized when contextualized within broader political, economic, and cultural frameworks.

Products of gene modification have vast implications. Creating public awareness and disseminating information on the subject seeks to demystify some of the widely held falsehoods regarding genetically modified products.

This an informative, thorough and easy-to-understand guide book that aims to enlighten and debunk some of the commonly held misconceptions on products of gene modification and to give the reader a better understanding of the role genetic modification will play. The review sheds light on the safety, and application of these products in medicine, the food industry and other areas, especially those where genetic modification may represent a cheap, faster, credible and viable alternative in achieving sustainable development amongst resource-poor communities.

The Anti-Development State Zed Books

Why is a country with some of the world's most fertile land also the home of so many hungry

people? Betsy Hartmann and James Boyce, both Bengali-speaking anthropologists, spent two years in Bangladesh investigating the paradox of hunger in a "basketcase" country that actually produces enough grain for its people. *Needless Hunger* follows the history and structure of Bangladesh society, and also draws us into the daily lives of the people of Katni, the village where the authors lived. "There is no natural barrier to filling the basic human needs of Bangladesh's people," they conclude. "But there is the man-made barrier of a social order benefiting the few at the expense of the many." They found that the foreign aid pouring into the country actually entrenches the very elite, who keep the majority powerless and hungry. *Needless Hunger* is also a book of hope, describing the strength and potential of the Bangladesh people, and their desire for a society where food-producing resources are controlled by the majority. Offering a comprehensive analysis of the human right to development and its realistic application in an era of economic globalization, Daniel Aguirre provides a

multidisciplinary overview of economic globalization and examines its challenges to the realization of human development. He takes this further by engaging with these challenges and highlighting the human rights opportunities presented by economic globalization and the international investment system. The volume proposes a triadic system of responsibility for human rights in development, to include mapping the overlapping human rights responsibilities of corporations at the micro-level, of states at the macro-level and of the international community at the meso-level. The scope of the book is broad and the approach to the subject is new. It will generate interest across many disciplines including political science, international law and economics. Activists, academics and development practitioners in many fields should also read this book.

Campefino tells the inspiring story of a true grassroots movement: poor peasant farmers teaching one another how to protect their environment while still earning a living. The first book in English about the farmer-led sustainable agriculture movement in Latin America, Campefino includes lots of first-person stories and

commentary from the farmer-teachers, mixing personal accounts with detailed analysis of the political, socioeconomic, and ecological factors that galvanized the movement. Campesino farmer leading a farmer to farmer training session in Mexico by Eric Holt-Gimenez Many years ago, author Eric Holt-Gimenez was a volunteer trying to teach sustainable agriculture techniques in the dusty highlands of central Mexico, with little success. Near the end of his tenure, he invited a group of visiting Guatemalan farmers to teach a course in his village. What he saw was like nothing he had known. The Guatemalans used parables, stories, and humor to present agricultural improvement to their Mexican compadres as a logical outcome of clear thinking and compassion; love of farming, of family, of nature, and of community. Rather than try to convince the Mexicans of their innovations, they insisted they experiment new things on a small scale first to see how well they worked. And they saw themselves as students, respecting the Mexicans' deep, lifelong knowledge of their own particular land and climate. All they asked in return was that the Mexicans turn around and share their

new knowledge with others--which they did. CAC campo3_photo by Food First This exchange was typical of a grassroots movement called Campesino a Campesino, or Farmer to Farmer, which has grown up in southern Mexico and war-torn Central America over the last three decades. In the book Campesino a Campesino, Holt-Gimenez writes the first history of the movement, describing the social, political, economic, and environmental circumstances that shape it. The voices and stories of dozens of farmers in the movement are captured, bringing to vivid life this hopeful story of peasant farmers helping one another to farm sustainably, protecting their land, their environment, and their families' future. The Paradox of Plenty Strategic Book Publishing . The book that takes a comprehensive look at the threat to our food supply from genetic engineering. . 15,000 copies sold in the first six months. . Includes new studies about the dangers of genetically engineered food. . Refutes the "feed the poor" propaganda spread by agribusinesses. . Is both an expose and educational primer on this controversial technology that is already a part of every American's diet. . Explains the dangers of these foods to ourselves and our environment in easily understood terms. Picture a

world? . Where the french fries you eat are registered as a pesticide, not a food. . Where vegetarians unwittingly consume fish genes in their tomatoes. . Where corn plants kill monarch butterflies. . Where soy plants thrive on doses of herbicide that kill every other plant in sight. . Where multinational corporations own the life forms that farmers grow and legally control the farmers' actions. That world exists These things are all happening, and they are happening to you. Genetically engineered foods--plants whose genetic structures are altered by scientists in ways that could never occur in nature--are already present in many of the products you buy in supermarkets, unlabeled, unwanted, and largely untested. The threat of these organisms to human and environmental health has caused them to be virtually banned in Europe, yet the U.S. government, working hand-in-hand with a few biotech corporations, has actively encouraged their use while discouraging labeling that might alert consumers to what they are eating. The authors show what the future holds and give you the information you need to preserve the independence and integrity of our food supply. What can you do? First, inform yourself. Genetically Engineered Food: Changing the Nature of Nature is the first book to take a comprehensive look at the many ramifications of this disturbing trend. Authors Martin Teitel and Kimberly Wilson explain what genetic engineering is and how it works, then explore the health risks involved with eating organisms never before seen in nature. They address the ecological catastrophe that could result from these modified plants crossing with wild species and escaping human control altogether, as well as the economic devastation that may befall small farmers who find themselves at the mercy of mega-corporations for their livelihood. Taking the discussion a step further, they consider the ethical and spiritual implications of this radical change in our relationship to the natural world, showing what the future holds and giving you the information you need to act on your own or to join others in preserving the independence and integrity of our food supply.

Needless Hunger Twenty-First Century Books
Tools, interfaces, methods, and practices that can help bring about a healthy, socially inclusive, and sustainable food future. Our contemporary concerns about food range from food security to agricultural sustainability to getting dinner on the table for family and friends. This book investigates food issues as they intersect with participatory Internet culture--blogs, wikis, online photo- and video-sharing platforms, and social networks--in efforts to bring about a healthy, socially inclusive, and sustainable food future. Focusing on our urban environments provisioned with digital and network capacities, and drawing on such "bottom-up" sociotechnical trends as DIY and open source, the chapters describe engagements with food and technology that engender (re-)creative interactions. In the first section, "Eat," contributors discuss technology-aided approaches to sustainable dining, including digital communication

between farmers and urban consumers and a "telematic" dinner party at which guests are present electronically. The chapters in "Cook" describe, among other things, "smart" chopping boards that encourage mindful eating and a website that supports urban wild fruit foraging. Finally, "Grow" connects human-computer interaction with achieving a secure, safe, and ethical food supply, offering chapters on the use of interactive technologies in urban agriculture, efforts to trace the provenance of food with a "Fair Tracing" tool, and other projects. Global human suffering in the twenty-first century seems bitterly entrenched, with almost half of the world's people remaining impoverished and over 26,000 children dying daily from preventable causes. This powerful and empowering text offers a way forward, presenting a realistic roadmap for enhanced benevolent global governance with practical, workable solutions to mass poverty. Now fully updated, including new chapters, The Global New Deal outlines the legal responsibilities for all institutions, organizations, and states under international law to respect, protect, and fulfill economic and social human rights. William F. Felice focuses on seven key areas: the dynamics within international political economy that contribute to economic inequality and create human suffering, the U.N.'s approach to economic and social human rights, the priority of ecosystem protection within all development strategies, the degree of racial bias prevalent in global economics, the relationship between gender equality and economic growth, the impact of military spending on human development, and the importance for the United States to adopt a human-rights approach to poverty alleviation. Arguing for a "global new deal," a set of international and national public policy proposals designed to protect the vulnerable and end needless suffering, this book provides a viable direction for structural reform to protect those left behind by the

global economy.

This powerful and empowering text offers a way forward for alleviating human suffering, presenting a realistic roadmap for enhanced global governance that can create workable solutions to mass poverty. William Felice and Diana Fuguitt emphasize the critical links between international human rights law, international political economy, and global organizations to formulate effective public policy to alleviate human suffering and protect basic human rights for all. They introduce students to the key legal and economic concepts central to economic and social human rights, including the right to education, a healthy environment, food, basic health care, housing, and clean water. They analyze the legal approaches undertaken by the United Nations and explain the key theories of international political economy (including liberalism, nationalism, and structuralism)

and central economic concepts (including global public goods, economic equality, and the capabilities approach). In the last decade, a backlash against economic globalization has been fueled by a variety of politicians around the world. A resurgent nationalism is often pitted against international organizations and frameworks for global cooperation. In this new edition, Felice and Fuguitt account for how the current global political climate has affected national and global policies for the provision of public goods and the protection of human rights. They focus on practical policies and actions that both state and nonstate actors can take to uphold economic and social rights. As the first book to integrate these legal and economic approaches, it provides a practical path to action for students, academics, and policy makers alike.

"Since its founding in 1975, Food First/Institute for Food and Development Policy has been in the forefront of the struggle to end world hunger. Through its research, Food First has shown that there is more than enough food for every man, woman, and child on the planet, but all too often the poor do not have access to that food. The Paradox of Plenty gathers together excerpts from twenty-seven of Food First's best writings to provide an integrated overview of the world food system, how global politics affect hungry people, and the impact of the free market."--BOOK

Ensuring women's economic empowerment and access to and control over resources requires an integrated approach to growth and development, focused on gender-responsive employment promotion and informed by the interdependency between economic and social development. Social objectives need to be incorporated into economic policies. Economic growth strategies should give attention to the real economy

and focus on creating a gender-sensitive macroeconomic environment, full employment and decent work, access to land, property and other productive resources as well as financial services, and full coverage of social protection measures. The Survey outlines a number of concrete recommendations in these critical areas, which if adopted, will facilitate women's equitable access to and control over economic and financial resources.
