"...an engaging and enlightening account from which we all can benefit."—The Wall Street Journal A better way to combat knee-jerk biases and make smarter decisions, from Julia Galef, the acclaimed expert on rational decision-making. When it comes to what we believe, humans see what they want to see. In other words, we have what Julia Galef calls a "soldier" mindset. From tribalism and wishful thinking, to rationalizing in our personal lives and everything in between, we are driven to defend the ideas we most want to believe—and shoot down those we don't. But if we want to get things right more often, argues Galef, we should train ourselves to have a "scout" mindset. Unlike the soldier, a scout's goal isn't to defend one side over the other. It's to go out, survey the territory, and come back with as accurate a map as possible. Regardless of what they hope to be the case, above all, the scout wants to know what's actually true. In *The Scout Mindset*, Galef shows that what makes scouts better at getting things right isn't that they're smarter or more knowledgeable than everyone else. It's a handful of emotional skills, habits, and ways of looking at the world—which anyone can learn. With fascinating examples ranging from how to survive being stranded in the middle of the ocean, to how Jeff Bezos avoids overconfidence, to how superforecasters outperform CIA operatives, to Reddit threads and modern partisan politics, Galef explores why our brains deceive us and what we can do to change the way we think.

The New York Times—bestselling author provides an “ entertaining ” look at how artists enlighten us about the workings of the brain (New York magazine). In this book, the author of How We Decide and Imagine: How Creativity Works “ writes skillfully and coherently about both art and science ” —and about the connections between the two (Entertainment Weekly). In this technology-driven age, it ' s tempting to believe that science can solve every mystery. After all, it ' s cured countless diseases and sent humans into space. But as Jonah Lehrer explains, science is not the only path to knowledge. In fact, when it comes to understanding the brain, art got there first. Taking a group of artists—a painter, a poet, a chef, a composer, and a handful of novelists—Lehrer shows how each one discovered an essential truth about the mind that science is only now

rediscovering. We learn, for example, how Proust first revealed the fallibility of memory; how George Eliot discovered the brain ' s malleability; how the French chef Escoffier discovered umami (the fifth taste); how C é zanne worked out the subtleties of vision; and how Gertrude Stein exposed the deep structure of language—a full half-century before the work of Noam Chomsky and other linguists. More broadly, Lehrer shows that there ' s a cost to reducing everything to atoms and acronyms and genes. Measurement is not the same as understanding, and art knows this better than science does. An ingenious blend of biography, criticism, and first-rate science writing, Proust Was a Neuroscientist urges science and art to listen more closely to each other, for willing minds can combine the best of both to brilliant effect. “ His book marks the arrival of an important new thinker . . . Wise and fresh. ” —Los Angeles Times
