This unique textbook explores practice-based research (PBR), using numerous practice examples to actively encourage and engage students and practitioners to embrace research as a meaningful support for their practice. Whilst evidence-based practice gives practitioners access to information about "universal" best practices, it does not prioritize practitioner-generated knowledge or promote new research-based interventions relevant to their own practice circumstances as PBR does. This book discusses the evolution of PBR as a distinct social work research approach, describes its principles and methods and presents a range of exemplars illustrating the application of PBR within different practice methods in different practice settings. The chapters cover: Identifying the research question in a PBR model Designing a study and identifying a methodology Sampling Literature reviews Gathering data Ethics Analyzing data and interpreting results Putting research into practice Viewing the practitioner as central to the research process, and research as a necessary component of practice, this invaluable book emphasizes the seamless integration of practice and research. It is about research in social work practice rather than research on social work practice. Each chapter includes an overview, an introduction, and a key concepts summary. Practice-Based Research in Social Work is a very accessible text suitable for social work students, particularly MSW students, and practitioners.

research/evidence-based practice for 2021! Burns & Grove's *The Practice of Nursing Research: Appraisal, Synthesis, and Generation of Evidence*, 9th Edition is the trusted resource for those wanting to master the research methods that are foundational to evidence-based practice. This highly respected textbook covers how to appraise and apply existing research evidence, as well as how to participate in research and quality improvement projects. This new 9th edition has been extensively updated to reflect today's focus on online research in the digital era and includes clear, step-by-step guidelines for all major quantitative and qualitative research approaches — including supporting examples from the latest high-quality literature. There's also new content on translational research, coverage of the most current research tools and techniques, and an increased use of illustrations, tables, and other visuals to help engage visually oriented readers of all levels. Coverage of quantitative, qualitative, and other research methodologies provides a solid foundation to conduct, appraise, and apply research evidence to the realities of today's clinical practice. Balanced coverage of qualitative and quantitative methods addresses the qualitative research methodologies that are often the starting point of research projects, particularly in magnet hospitals and DNP programs. Clear, comprehensive coverage is organized into five units that include: an introduction to nursing research; coverage of the research process; application for evidence-based health care; how to analyze data, determine outcomes, and disseminate research; and how to propose and seek funding for research. Strong emphasis on evidence-based practice addresses this key graduate-level QSEN competency and reinforces how to generate research evidence and appraise and synthesize existing research for application to clinical practice. Rich examples from nursing literature bring research principles to life. Emphasis on the most currently used research methodologies focuses on the methods used in both quantitative research and qualitative research, as well as outcomes research and mixed-methods research. Coverage of digital data collection examines the use of online research tools. Quick-reference summaries include a table of research methods inside the front cover and a list of types of research syntheses (with definitions) inside the back cover. Helpful user resources are included with each new text purchase on the companion Evolve website and feature 400 interactive review questions along with a library of 10 full-text research articles.

Is it possible for human beings to study other humans as scientifically as physicists and microbiologists study inorganic matter, cells, and tissue? According to Dr. Babbie, one of the most recognized names in applied sociology, the social scientist must understand more than just the methodology involved in research. Babbie's conviction that the power of social research lies more in the realm of questions than in the realm of answers prompted him to compose fifteen short essays addressing some of the fundamental philosophical and methodological issues involved in the scientific study of human beings.

Feminist Speculations and the Practice of Research-Creation provides a unique introduction to research-creation as a methodology, and a series of exemplifications of research-creation projects in practice with a range of participants including secondary school students, artists, and academics. In conversation with leading scholars in the field, the book outlines research-creation as transdisciplinary praxis embedded in queer-feminist anti-racist politics. It provides a methodological overview of how the author approaches

research-creation projects at the intersection of literary arts, textuality, artistic practice, and pedagogies of writing, drawing on concepts related to the feminist materialisms, including speculative thought, affect theories, queer theory, and process philosophy. Further, it troubles representationalism in qualitative research in the arts. The book demonstrates how research-creation operates through the making of or curating of art or cultural productions as an integral part of the research process. The exemplification chapters engage with the author's research-creation events with diverse participants all focused on text-based artistic projects including narratives, inter-textual marginalia art, postcards, songs, and computer-generated scripts. The book is aimed at graduate students and early career researchers who mobilize the literary arts, theory, and research in transdisciplinary settings.

The Practice of Research SAGE Publications

In this book I have concentrated on drawing attention to various conceptions of accountability that might be brought to bear in judging the practice of social research. Much of the book is organized around making explicit the assumptions that influence what counts as “proper” research in society, including assumptions about how social inquirers might be held accountable. My focus is on reviewing discourses around the practice of “professional” inquiry, with a view to reconsidering the way in which people create expectations for accountable social inquiry. My focus hereon is related to my concern that the manner in which judgments about researchers’ accountability are made, is not without social consequences for our way of living in society. I have approached the issues by beginning with a discussion of tenets of the position called “positivism” (so named by certain proponents), and by considering the view on accountability that is implied by adherence to these tenets. Briefly expressed, positivist argumentation suggests that researchers are required to “do science” in a manner that warrants their being considered, indeed, scientists. I use my discussion of accountability as seen within positivist argumentation to explicate ways in which alternative positions have arisen as ways of treating accountability issues. Through my way of comparing the various positions, I hope to provide some indication of the complexity of ethical and accountability issues in social inquiry.
