Psychology of Language - ResearchGate
Psycholinguistics or psychology of language is the study of the interrelation between linguistic factors and psychological aspects.. The field is concerned with psychological and neurobiological factors that enable humans to acquire, use, comprehend and produce

language. The discipline is mainly concerned with the mechanisms in which languages are processed and represented in the mind and brain. *Psycholinguistics - Wikipedia*
Language acquisition occurs naturally and effortlessly during the early stages of life, and this acquisition occurs in a predictable sequence for individuals around the world. Language has a strong influence on thought, and the concept of how

language may influence cognition remains an area of study and debate in psychology.
