Genetic programming (GP) is a systematic, domain-independent method for getting computers to solve problems automatically starting from a high-level statement of what needs to be done. Using ideas from natural evolution, GP starts from an ooze of random computer programs, and progressively refines them through processes of mutation and sexual recombination, until high-fitness solutions emerge. All this without the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific

discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book.

A Fish Guide to Freshwater Fishes of Ontario Chronicle Books

This unique publication, produced in association with the Royal Ontario Museum, is the guide Ontario birders have been waiting for... The ROM Field Guide to Birds of Ontario is researched and written specifically for the Ontario bird watcher. leadership development but also teaching them how to prioritize and balance their spiritual and personal lives.

Newcomb's Wildflower Guide Royal Ontario Museum

Following a short introduction to the species and its closest commercially viable related species, namely pirapatinga (*Piaractus brachypomus*) and pacu (*Piaractus mesopotamicus*), this field guide provides practical information on the culture and reproduction of tambaqui (*Colossoma macropomum*). As a field guide it aims to support the understanding and dissemination of applicable technologies for the culture and reproduction of tambaqui, i.e. what should be done – as well as when and how it should be done – in order to achieve success in the artificial propagation as well as the fingerling and table fish production stages. The concise technical descriptions in this guide are accompanied by self-explanatory illustrations and a reader-friendly glossary of technical terms, which is important for tambaqui aquaculture farmers.

A Guide to Amphibians and Reptiles

Adventure Publications

World Wildlife Fund Guide to Extinct Species of Modern Times: Birds of the Pacific islands and North America ; Plants of the Hawaiian islands ; Fishes of North America ; Mammals of North and South

Africa ; Mammals of North America and the Atlantic islands Royal Ontario Museum

There are thousands of moth species in the northeast of North America, and while it might seem that they are all drab grays and browns, there is actually a startling variety. They come in a rainbow of colors, from brilliant oranges and pinks to soft greens and violets. There are moths with colorful leopard-like spots, and ones that look more like B-movie aliens; some that are as large as your hand, and others the size of a grain of rice. With helpful tips on how to attract and identify moths, range maps and season graphs showing when and where to find each species, and clear photographs that use the unique Peterson arrow system for easy identification, this guide provides everything an amateur or experienced moth-watcher needs. Sponsored by the National Wildlife Federation and the Roger Tory Peterson Institute.
