Blood

alcohol is measured directly through testing blood, or indirectly through

tests that use breath, urine, or saliva. A person's BAC is affected by the amount of alcohol he consumes and the rate his body absorbs it. It is important to note that the amount of alcohol contained in a drink varies significantly.

...
The actual amount of time

depends on the health of the individual's liver, and on gender. Women do not metabolize alcohol as efficiently or rapidly as men.

The relationship of a standard drink to blood alcohol content also depends on the size of the person, their body mass index, and of course gender.

The relationship between the long-term use of alcohol and blood pressure levels is a major medical concern as alcoholic drinks are

commonly consumed by most cultures in the world, and one in eight American adults (12.7%) suffer from alcohol abuse. The relationship between blood alcohol concentration (BAC ...

Alcohol consumption causes motor vehicle accident (MVA) injury in a dose-response fashion.

However, the relationship between how this risk is different with respect to fatal and

non-fatal outcomes is not clear. A meta-analysis has already been completed for alcohol and consumption and non-fatal MVA injury, but none exists for fatal injury.

Alcohol and High Blood Pressure | Relationship Between ...

There are strong evidence that there exist a correlation factor of 2100/1 between Blood Alcohol Contents (BAC) and the Breath Alcohol contents

(BrAC). To obtain an accurate correlation the (BAC) and BrAC, a deep lungs breath samples are required.
