Penzler Pick, June 2001: Ridley Pearson, who has written 14 previous books, many of them featuring his Seattle cop Lou Boldt, ups the ante in his latest thriller. Northern Union Railroad has been experiencing a series of accidents with their freight trains, but it is not until they find a freight car covered with blood that they call in outside help. Peter Tyler used to be a cop, until he nearly beat a black man to death and lost his badge. When he gets a second chance via an old friend at the National Transportation Safety Board, he drives a convertible through a snowstorm with the top down (he suffers from claustrophobia) to view the freight car. He arrives at the scene to discover that he will have to deal with Northern Union's own security officer, Nell Priest, a black woman who already knows Tyler's history. Meanwhile, Umberto Alvarez, the train wrecker, is systematically working his way towards his ultimate wreck, Northern's F.A.S.T. train, due to make its maiden run from New York to Washington, D.C. Alvarez lost his wife and children when their car stalled between the gates at a crossing and were crushed by one of Northern's trains. Although Northern Union was cleared of all responsibility and Alvarez's wife was found negligent, he doesn't think that's so. As Peter Tyler's investigation proceeds, he begins to come to the same conclusion. Closing in on Alvarez, he tries to interview the crossing guard who was on duty the day the wreck occurred. On arriving at the man's apartment, he finds the man bludgeoned to death--with the same stick with which Tyler beat the black man all that time ago. It's time to get paranoid. Who at Northern is covering up and what role does Nell play in all this? As always in a Ridley Pearson thriller, the action doesn't stop until

the final page. --Otto Penzler

John Knox and Grace Chu, the incomparable duo of the Risk Agent novels, team up again in the latest international thrill ride from New York

Times-bestselling author Ridley Pearson. When ex-military contractor John Knox receives a text from partner Grace Chu warning that she fears her cover may have been blown while on assignment, he jumps into action. Knox must locate her overseas handlers, convince them of the threat, and then attempt to retrace the well-hidden steps of a woman who had been attempting to determine how one million euros' worth of AIDS vaccine disappeared, all while eluding angry poachers on a parallel trail. Corruption isn't a "problem" in Kenya, it's the way of doing business. The poaching of ivory from African elephants, driven by

insatiable demand from mainland China, fuels constant blood and slaughter. Knox faces police, national rangers, journalists, and safari companies who are each in their own symbiotic relationship with elephants, both good and bad. As the threat from Al-Shaabab militants interferes with his pursuit of Grace, Knox finds himself pitted against the most savage and suicidal fighters in the world. And there's this woman, Grace, always in his head. His gut. As Grace watches as her civilized self slips away while abandoned in the bush, Knox races against the clock to find her.

Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to Improving Diagnosis in Health Care,

diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. Improving Diagnosis in Health Care, a continuation of the landmark Institute of Medicine reports To Err Is Human (2000) and Crossing the Quality Chasm (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors "has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among

health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of

disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
