In the history of European communist dictatorships, the Albanian case deserves particular attention. Half a century of Albanian communism saw an attempt to apply the model of forceful industrialisation, combined with a brutal and multifarious indoctrination of society, to a backward country which had lived in traditional tribal structures. In Albania, the model of power which was called Stalinist in Europe proved particularly durable and impossible to verify through demographic and generational changes. This work is the first to analyse the process of the ideologisation of the state and its impact on the economic, social, and cultural life. An important asset of the book is its extensive use of Albanian source materials as well as works of Albanian historians.

This book focuses on the Mediterranean/MENA migration crisis and explores the human security implications for migrants and refugees in this troubled region. Since the Arab uprisings of 2010/2011, the Middle East and North Africa region has experienced major political transformations and called

into question the legitimacy of states in the region. Displaced populations continue to suffer due to the major conflicts in Syria, Iraq and elsewhere, causing fragmentation and dis-integration of communities.

Contributors to this volume analyze how and why this crisis differs significantly from previous migration/refugee flows in the region, explain the historical and political antecedents of this crisis which have played a part in its shaping, and explore the relationship between human security and the protection of vulnerable individuals and groups.

Hortense and the Shadow Little, Brown Books for Young Readers

The importance of chloride ions in cell physiology has not been fully recognized until recently, in spite of the fact that chloride (Cl⁻), together with bicarbonate, is the most abundant free anion in animal cells, and performs or determines fundamental biological functions in all tissues. For many years it was thought that Cl⁻ was distributed in thermodynamic equilibrium across the plasma membrane of most cells. Research carried out during the last couple of decades has led to a dramatic change in this simplistic view. We now know that most animal cells, neurons included, exhibit a non-equilibrium distribution of Cl⁻ across their plasma membranes. Over the last 10 to 15 years, with the growth of molecular biology and the advent of new optical methods, an enormous amount of exciting new information has become available on the molecular structure and function of Cl⁻ channels and carriers. In nerve cells, Cl⁻ channels and carriers play key functional roles in GABA- and glycine-mediated synaptic inhibition, neuronal growth and development, extracellular potassium scavenging, sensory-transduction, neurotransmitter uptake and cell volume control. Disruption of Cl⁻ homeostasis in neurons underlies pathological conditions such as epilepsy, deafness, imbalance, brain edema and ischemia, pain and neurogenic inflammation. This book is about how chloride ions are regulated and how they cross the plasma membrane of neurons. It spans from molecular structure and function of carriers and channels involved in Cl⁻ transport to their role in various diseases. The first comprehensive book on the structure, molecular biology, cell physiology, and role in diseases of chloride transporters / channels in the nervous system in almost 20 years Chloride is the most abundant free anion in animal cells. This book summarizes and integrates for the first time the important research of the

past two decades that has shown that Cl⁻ channels and carriers play key functional roles in GABA- and glycine-mediated synaptic inhibition, neuronal growth and development, extracellular potassium scavenging, sensory-transduction, neurotransmitter uptake and cell volume control. The first book that systematically discusses the result of disruption of Cl⁻ homeostasis in neurons which underlies pathological conditions such as epilepsy, deafness, imbalance, brain edema and ischemia, pain and neurogenic inflammation. Spanning topics from molecular structure and function of carriers and channels involved in Cl⁻ transport to their role in various diseases. Involves all of the leading researchers in the field. Includes an extensive introductory section that covers basic thermodynamic and kinetics aspects of Cl⁻ transport, as well as current methods for studying Cl⁻ regulation, spanning from fluorescent dyes in single cells to knock-out models to make the book available for a growing population of graduate students and postdocs entering the field.
