Edward Jay Epstein investigates the most brilliant illusion in modern history: the illusion that diamonds are so rare that they will maintain their value forever. He explains how the the De Beers cartel, backed by a syndicate of Jewish diamond dealers in London, created an artificial

scarcity by controlling the worldwide supply and used modern advertising to establish it in the mind of the public. In this book, comprised of six essays, we also learn about the secret workings of the cartel over the past century, including: + Why you cannot always sell diamonds for the price you paid? + Why Russia is now taking over the cartel operation? + How De Beers now uses the concept of blood diamonds to control prices? + Why Nicky Oppenheimer exited De Beers in 2011? Praise for Edward Jay Epstein: "Brilliant Expose of the International diamond monopoly" --Telegraph (London) "Full of readable if somewhat garish descriptions of diamond mines, diamond traders, and the activities of governments. If Ian Fleming were alive, he would have found much rewarding material here." -Woodrow Wyatt, Sunday Times

The importance of chloride ions in cell physiology has not been fully recognized until recently, in spite of the fact that chloride (Cl⁻), together with bicarbonate, is the most abundant free

anion in animal cells, and performs or determines fundamental biological functions in all tissues. For many years it was thought that Cl⁻ was distributed in thermodynamic equilibrium across the plasma membrane of most cells. Research carried out during the last couple of decades has led to a dramatic change in this simplistic view. We now know that most animal cells, neurons included, exhibit a non-equilibrium distribution of Cl⁻ across their plasma membranes. Over the last 10 to 15 years, with the growth of molecular biology and the advent of new optical methods, an enormous amount of exciting new information has become available on the molecular structure and function of Cl⁻ channels and carriers. In nerve cells, Cl⁻ channels and carriers play key functional roles in GABA- and glycine-mediated synaptic inhibition, neuronal growth and development, extracellular potassium scavenging, sensory-transduction, neurotransmitter uptake and cell volume control. Disruption of Cl⁻ homeostasis in neurons underlies pathological conditions such as epilepsy, deafness, imbalance, brain edema and ischemia, pain and neurogenic inflammation. This book is about how chloride ions are regulated and how they cross the plasma membrane of neurons. It spans from molecular structure and function of carriers and channels involved in Cl⁻

transport to their role in various diseases. The first comprehensive book on the structure, molecular biology, cell physiology, and role in diseases of chloride transporters / channels in the nervous system in almost 20 years Chloride is the most abundant free anion in animal cells. This book summarizes and integrates for the first time the important research of the past two decades that has shown that Cl- channels and carriers play key functional roles in GABA- and glycine-mediated synaptic inhibition, neuronal growth and development, extracellular potassium scavenging, sensory-transduction, neurotransmitter uptake and cell volume control The first book

that systematically discusses the result of disruption of Cl- homeostasis in neurons which underlies pathological conditions such as epilepsy, deafness, imbalance, brain edema and ischemia, pain and neurogenic inflammation Spanning topics from molecular structure and function of carriers and channels involved in Cl- transport to their role in various diseases Involves all of the leading researchers in the field Includes an extensive introductory section that covers basic thermodynamic and kinetics aspects of Cl- transport, as well as current methods for studying Cl- regulation, spanning from fluorescent dyes in single cells to knock-out models to make the book

available for a growing population of graduate students and postdocs entering the field

“Wild Art” refers to work that exists outside the established, rarified world of art galleries and cultural channels. It encompasses uncatalogued, uncommodified art not often recognized as such, from graffiti to performance, self-adornment, and beyond. Picking up from

their breakthrough book on the subject, *Wild Art*, David Carrier and Joachim Pissarro here delve into the ideas driving these forms of art, inquire how it came to be marginalized, and advocate for a definition of “taste,” one in which each expression is acknowledged as being different while deserving equal merit. Arguing that both the “art world” and “wild art” have the same capacity to produce aesthetic joy, Carrier and Pissarro contend that watching skateboarders perform *Christ Air*, for example, produces the same sublime experience in one audience that another enjoys while taking in a ballet; therefore, both mediums deserve careful reconsideration. In making their case, the two provide a history of the institutionalization of “taste” in Western

thought, point to missed opportunities for its democratization in the past, and demonstrate how the recognition and acceptance of “wild art” in the present will radically transform our understanding of contemporary visual art in the future. Provocative and optimistic, *Aesthetics of the Margins / The Margins of Aesthetics* rejects the concept of “kitsch” and the high/low art binary, ultimately challenging the art world to become a larger and more inclusive place.

Interpreting the meaning of hospitality in an unwelcoming political moment Amid xenophobic challenges to America's core value of welcoming the tired and the poor, Irina Aristarkhova calls for new forms of hospitality in her engagement with the works of eight international artists. In this first monograph on hospitality in contemporary art, Aristarkhova employs a feminist perspective to critically explore the artworks of Ana Prvacki, Faith Wilding, Lee Mingwei, Kathy High, Mithu Sen, Pippa Bacca, Silvia Moro, and Ken Aptekar and ask who, how, and what determines who is worthy of our welcome. Spanning a diverse range of contemporary art practices, *Arrested Welcome* shows how artists challenge our existing notions of hospitality--culturally, philosophically, and politically. From the role of "microcourtesies" in

social change to the portrayal of waiting as a feminist endeavor, Aristarkhova looks deeply into topics such as gender stereotypes of welcome, ways to reclaim civility, and the means by which guests (sometimes human, sometimes animal) push the limits of our hosting traditions. Blending a feminist analysis of hospitality with in-depth case studies on how contemporary artists stimulate personal reflection and political engagement, Aristarkhova initiates these important conversations at a critical time of national and international hospitality crises.
