The Secret in Medieval Literature: Alternative Worlds in the Middle Ages explores the many strange phenomena, both in the Middle Ages and today, that do not find any good rational explanations. Those do not pertain to magic or to religion in the traditional sense of the word; they are secrets of an epistemological kind and tend to defy human rationality, without being marginal or irrelevant. At first sight, we might believe that we face elements from fairy tales, but the medieval cases discussed here go far beyond such a simplistic approach to the mysterious dimension of secrets. In fact, as this book argues, medieval poets commonly engaged with alternative forces and described their workings within the human context (both in the Latin West and in the East), without being able to come to terms with them critically. Those mysteries appear both in heroic epics and courtly romances, among other genres, and they figure more frequently than we might have assumed. On the one hand, we could conceive of those secrets as the product of literary liberties and imagination; on the other, those secrets prove to be rather serious agents intervening in the lives of the fictional protagonists. By the same token, our modern world is not all rationality and material conditions either. The study of secrets in the Middle Ages thus opens the pathway toward a new epistemology both for the people in the pre-modern age and us today.

Eerie Publications' horror magazines brought blood and bad taste to America's newsstands from 1965 through 1975. Ultra-gory covers and bottom-of-the-barrel production values lent an air of danger to every issue, daring you to look at (and purchase) them. *The Weird of World of Eerie Publications* introduces the reader to Myron Fass, the gun-toting megalomaniac publisher who, with tyranny and glee, made a career of fishing pocketbook change from young readers with the most insidious sort of exploitation. You'll also meet Carl Burgos, who, as editor of Eerie Publications, ground his axe against the entire comics industry. Slumming comic art greats and unknown hacks were both employed by Eerie to plagiarize the more inspired work of pre-Code comic art of the 1950s. Somehow these lowbrow abominations influenced a generation of artists who proudly blame career choices (and mental problems) on Eerie Publications. One of them, Stephen R. Bissette (*Swamp Thing*, *Taboo*, *Tyrant*), provides the introduction for this volume. Here's the sordid background behind this mysterious comics publisher, featuring astonishingly red reproductions of many covers and the most spectacularly creepy art.

The bestselling author of $E=mc^2$ weaves tales of romance, divine inspiration, and fraud through an account of the invisible force that permeates our universe—electricity—and introduces us to the virtuoso scientists who plumbed its secrets. For centuries, electricity was seen as little more than a curious property of certain substances that sparked when rubbed. Then, in the 1790s, Alessandro Volta began the scientific investigation that ignited an explosion of knowledge and invention. The force that once seemed inconsequential was revealed to be responsible for everything from the structure of the atom to the functioning of our brains. In harnessing its power, we have created a world of wonders—complete with roller coasters and radar, computer networks and psychopharmaceuticals. In *Electric Universe*, the great discoverers come to life in all their brilliance and idiosyncrasy, including the visionary Michael Faraday, who struggled against the prejudices of the British class system, and Samuel Morse, a painter who, before inventing the telegraph, ran for mayor of New York City on a platform of persecuting Catholics. Here too is Alan Turing, whose dream of a marvelous thinking machine—what we know as the computer—was met with indifference, and who ended his life in despair after British authorities forced him to undergo experimental treatments to “cure” his homosexuality. From the frigid waters of the Atlantic to the streets of Hamburg during a World War II firestorm to the interior of the human body, *Electric Universe* is a mesmerizing journey of discovery.

How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species. On the one hand, we struggle to survive on our own in the wild, often failing to overcome even basic challenges, like obtaining food, building shelters, or avoiding predators. On the other hand, human groups have produced ingenious technologies, sophisticated languages, and complex institutions that have permitted us to successfully expand into a vast range of diverse environments. What has enabled us to dominate the globe, more than any other species, while remaining virtually helpless as lone individuals? This book shows that the secret of our success lies not in our innate intelligence, but in our collective brains—on the ability of human groups to socially interconnect and learn from one another over generations. Drawing insights from lost European explorers, clever chimpanzees, mobile hunter-gatherers, neuroscientific findings, ancient bones, and the human genome, Joseph Henrich demonstrates how our collective brains have propelled our species' genetic evolution and shaped our biology. Our early capacities for learning from others produced many cultural innovations, such as fire, cooking, water containers, plant knowledge, and projectile weapons, which in turn drove the expansion of our brains and altered our physiology, anatomy, and psychology in crucial ways. Later on, some collective brains generated and recombined powerful concepts, such as the lever, wheel, screw, and writing, while also creating the institutions that continue to alter our motivations and perceptions. Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution, and how culture-gene interactions launched our species on an extraordinary evolutionary trajectory. Tracking clues from our ancient past to the present, *The Secret of Our Success* explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species' immense success and the origins of human uniqueness.

This original volume explores Jung ' s earliest English seminars, held in 1919 and 1920, in relation to the impact of *Liber Novus* and *The Red Book* and his new exoteric and esoteric concepts of analytical psychology created during the Great War. The groundbreaking seminars presented in the book yield important insights about Jung ' s application of analytical methods and the psychological concepts he developed in response to his confrontation with the unconscious, recorded in *Liber Novus* and in his *Collected Papers on Analytical Psychology*, edited by Dr. Constance Long, one of his first English analysts and colleagues. The English seminars illuminate the extent to which Jung shared, or alluded to, material from *Liber Novus* and *The Red Book*, supported by evidence from Long ' s journal which contains a wealth of additional material about Jung ' s method of supervision, views on transference, her own analysis and the eventual break-up of the London group. *Enchanting the Unconscious* is an important and timeless contribution to Jungian history and our understanding of early formulations of Jung ' s conceptual model of the psyche, making it of great interest to Jungian analysts, analytical psychologists, students of Jungian history and general readers interested in exploring Jung ' s earliest teaching seminars previously undocumented or distorted by hearsay.
