In the final book in the Infected trilogy,

the entire human race balances on the razor's edge of annihilation, beset by an enemy that turns our own bodies against us, that changes normal people into psychopaths or transforms them into nightmares. To some, Doctor Margaret Montoya is a hero—a brilliant scientist who saved the human race from an alien intelligence determined to exterminate all of humanity. To others, she's a monster—a mass murderer single-handedly responsible for the worst atrocity ever to take place on American soil. All Margaret knows is that she's broken. The blood of a million deaths is on her hands. Guilt and nightmares have turned her into a shut-in, too mired in self-hatred even to

salvage her marriage, let alone be the warrior she once was. But she is about to be called into action again. Because before the murderous intelligence was destroyed, it launched one last payload: a soda can–sized container filled with deadly microorganisms that make humans feed upon their own kind. That harmless-looking container has languished a thousand feet below the surface of Lake Michigan, undisturbed and impotent . . . until now. Part Cthulhu epic, part zombie apocalypse and part blockbuster alien-invasion tale, *Pandemic* completes the *Infected* trilogy and sets a new high-water mark in the world of horror fiction.

Infected and Contagious—comes a tale of genetic experimentation’s worst nightmare come true. Every five minutes, a transplant candidate dies while waiting for a heart, a liver, a kidney. Imagine a technology that could provide those life-saving transplant organs for a nominal fee ... and imagine what a company would do to get a monopoly on that technology. On a remote island in the Canadian Arctic, PJ Colding leads a group of geneticists who have discovered this holy grail of medicine. By reverse-engineering the genomes of thousands of mammals, Colding's team has dialed back the evolutionary clock to re-create humankind’s common ancestor. The method? Illegal. The result? A computer-engineered living creature, an animal whose organs can be implanted in any person, and with no chance of transplant rejection. There's just one problem: these ancestors are

not the docile herd animals that Colding's team envisioned. Instead, Colding's work has given birth to something big, something evil. With these killer creatures on the prowl, Colding and the woman he loves must fight to survive — even as government agents close in to shut the project down, and the deep-pocketed company backing this research proves to have its own cold-blooded agenda. As the creators become the prey in the ultimate battle for survival, Scott Sigler takes readers on the ultimate thrill-ride—and offers a chilling cautionary account of what can happen when hubris, greed, and madness drive scientific experimentation past the brink of reason.

You hold in your hands a recently discovered poetry journal—the poetry journal of a vampire. William Butten was en route to a new land on the Mayflower when he was turned into a vampire by a fellow passenger, a beautiful woman named Katherine. These pages contain his heartbreaking story—the story of a vampire who has lived through (and perhaps caused) some of America's defining events. As he travels the country and as centuries pass, he searches for his lost love and records his adventures and misadventures using the form of poetry known as haiku. As Butten

documents bloody wars, a certain tea party in Boston, living the high life during the Great Depression, two Woodstock festivals, the corruption of Emily Dickinson, and hanging out with Davy Crockett, he keeps to the classic 5-7-5 syllable structure of haiku. The resulting poems are hilarious, repulsive, oddly romantic, and bizarre. Read along, and you just may find a new appreciation for—and insight into—various events in American history. And blood.
