This volume introduces the reader to the latest experimental and bioinformatics methods for addressing man-made and natural disasters. International policy and treaties are covered along with various navigation systems, GIS, and the emerging domain of social media are utilized in the context of emergency management needs and requirements. These systems are now critical in addressing major disasters through mitigation, warning, planning, recovery, and response. It covers both the overall role and perspective of satellite applications and how they support the emergency management community as well as the various space applications that support their work. Key insights are provided as to how satellite telecommunications, remote sensing, and navigation systems are utilized in the context of disaster response.

This SpringerBrief provides a general overview of the role of satellite applications for disaster management and as tools to analyze and visualize data. It is appropriate for practicing emergency managers, Emergency Management (EM) courses, as well as for those involved in various space applications and developing new satellite technologies.
