"Like taking a tour of the White House with a gifted storyteller at your side!" Why, in the minutes before John F. Kennedy was murdered, was a blood-red carpet installed in the Oval Office? If Abraham Lincoln never slept in the Lincoln Bedroom, where did he sleep? Why was one president nearly killed in the White House on inauguration day—and another secretly sworn in? What really happened in the Situation Room on September 11, 2001? History leaps off the page in this "riveting," "fast-moving" and "highly entertaining" book on the presidency and White House in *Under This Roof*, from award-winning White House-based journalist Paul Brandus. Reporting from the West Wing briefing room since 2008, Brandus—the most followed White House journalist on Twitter (@WestWingReport)—weaves together stories of the presidents, their families, the events of their time—and an oft-ignored major character, the White House itself. From George Washington—who selected the winning design for the White House—to the current occupant, Barack Obama—the story of the White House is the story of America itself, Brandus writes. You'll: Walk with John Adams through the still-unfinished mansion, and watch Thomas Jefferson plot to buy the Louisiana Territory Feel the fear and panic as British invaders approach the mansion in 1814—and Dolley Madison frantically saves a painting of Washington Gaze out the window with Abraham Lincoln as Confederate flags flutter in the breeze on the other side of the Potomac Be in the room as one president is secretly sworn in, and another gambles away the White House china in a card game Stand by the presidential bed as one First Lady—covering up her husband's illness from the nation—secretly makes decisions on his behalf Learn how telephones, movies, radio, TV changed the presidency—and the nation itself Through triumph and tragedy, boom and bust, secrets and scandals, Brandus takes you to the presidential bedroom, movie theater, Situation Room, Oval Office and more. *Under This Roof* is a "sensuous account of the history of both the home of the President, and the men and women who designed, inhabited, and decorated it. Paul Brandus captivates with surprising, gloriously raw observations."

MUST WE AGE? A long life in a healthy, vigorous, youthful body has always been one of humanity's greatest dreams. Recent progress in genetic manipulations and calorie-restricted diets in laboratory animals hold forth the promise that someday science will enable us to exert total control over our own biological aging. Nearly all scientists who study the biology of aging agree that we will someday be able to substantially slow down the aging process, extending our productive, youthful lives. Dr. Aubrey de Grey is perhaps the most bullish of all such researchers. As has been reported in media outlets ranging from 60 Minutes to The New York Times, Dr. de Grey believes that the key biomedical technology required to eliminate aging-derived debilitation and death entirely—technology that would not only slow but periodically reverse age-related physiological decay, leaving us biologically young into an indefinite future—is now within reach. In *Ending Aging*, Dr. de Grey and his research assistant Michael Rae describe the details of this biotechnology. They explain that the aging of the human body, just like the aging of man-made machines, results from an accumulation of various types of damage. As with man-made machines, this damage can periodically be repaired, leading to indefinite extension of the machine's fully functional lifetime, just as is routinely done with classic cars. We already know what types of damage accumulate in the human body, and we are moving rapidly toward the comprehensive development of technologies to remove that damage. By demystifying aging and its postponement for the nonspecialist reader, de Grey and Rae systematically dismantle the fatalist presumption that aging will forever defeat the efforts of medical science.

The Transhumanist Reader Routledge

A provocative work by medical ethicist James Hughes, *Citizen Cyborg* argues that technologies pushing the boundaries of humanness can radically improve our quality of life if they are controlled democratically. Hughes challenges both the technophobia of Leon Kass and Francis Fukuyama and the unchecked enthusiasm of others for limitless human enhancement. He argues instead for a third way, "democratic transhumanism," by asking the question destined to become a fundamental issue of the twenty-first century: How can we use new cybernetic and biomedical technologies to make life better for everyone? These technologies hold great promise, but they also pose profound challenges to our health, our culture, and our liberal democratic political system. By allowing humans to become more than human - "posthuman" or "transhuman" - the new technologies will require new answers for the enduring issues of liberty and the common good. What limits should we place on the freedom of people to control their own bodies? Who should own genes and other living things? Which technologies should be mandatory, which voluntary, and which forbidden? For answers to these challenges, *Citizen Cyborg* proposes a radical return to a faith in the resilience of our democratic institutions.

In *Posthumanism: A Guide for the Perplexed*, Peter Mahon goes beyond recent theoretical approaches to 'the posthuman' to argue for a concrete posthumanism, which arises as humans, animals and technology become entangled, in science, society and culture. Concrete posthumanism is rooted in cutting-edge advances in techno-science, and this book offers readers an exciting, fresh and innovative exploration of this undulating, and often unstable, terrain. With wide-ranging coverage, of cybernetics, information theory, medicine, genetics, machine learning, politics, science fiction, philosophy and futurology, Mahon examines how posthumanism played-and continues to play-a crucial role in shaping how we understand our world. This analysis of posthumanism centers on human interactions with tools and technology, the centrality of science, as well as an understanding of techno-science as a pharmakon-an ancient Greek word for a substance that is both poison and cure. Mahon argues that posthumanism must be approached with an interdisciplinary attitude: a concrete posthumanism is only graspable through knowledge derived from science and the humanities. He concludes by sketching a 'post-humanities' to help us meet the challenges of posthumanism, challenges to which we all must rise. *Posthumanism: A Guide for the Perplexed* provides a concise, detailed and coherent exploration of posthumanism, introducing key approaches, concepts and themes. It is ideal for readers of all stripes who are interested in a concrete posthumanism and require more than just a simple introduction.

What if I told you that in a few short minutes, I could disprove the existence of God? Skeptical? I know I would be, but whether you are an atheist, like me, or a fervent believer, this small booklet will challenge what you think you know about knowledge and the existence of the divine. Plus, I'm funny. I've been an atheist activist for over 30 years and I have talked to hundreds of religious believers of varying religions and degrees of belief. I've heard all the arguments for the belief in a deity and found them insufficient. I've been active in the greater atheist community and heard all the counter-arguments from my fellow non-believers too. Now, I have come up with something new. An argument that is simple and irrefutable. Putting my Master's Degree in Philosophy to good use, this short booklet will at the very least get you thinking. This is a great new argument to use against those door-to-door Mormons or Jehovah's Witnesses. Challenge your religious family members with it too. And if you are religious, I dare you to read this booklet. It's short and easy to read and not only will I disprove the existence of God, as an extra bonus, I will give you 5 adequate reasons to be an atheist.

After publishing his bestselling novel *The Transhumanist Wager* in 2013, Zoltan Istvan began frequently writing essays about the future. A former journalist with National Geographic, Istvan's essays spanned topics from the Singularity to cyborgism to radical longevity to futurist philosophy. He also wrote about politics as he made a surprisingly popular run for the US Presidency in 2016, touring the country aboard his coffin-shaped *Immortality Bus*, which The New York Times Magazine called "The great sarcophagus of the American highway...a metaphor of life itself." Zoltan's provocative campaign and radical tech-themed articles garnered him the title of the "Science Candidate" by his supporters. Many of his writings-published in Vice, Quartz, Slate, The Guardian, Yahoo! News, Gizmodo, TechCruch, Psychology Today, Salon, New Scientist, Business Insider, The Daily Dot, Maven, Cato Institute, The Daily Caller, Metro, International Business Times, Wired UK, The San Francisco Chronicle, Newsweek, and The New York Times-went viral on the internet, garnishing millions of reads and tens of thousands of comments. His articles-often seen as controversial, provocative, and secular-elevated him to worldwide recognition as one of the de facto leaders of the burgeoning transhumanism movement. Here are many of those watershed essays again, organized, edited, and occasionally readapted by the author in this comprehensive nonfiction work, *A Transhumanist Journal: Writings that Launched the Transhumanism Movement*-part of a forthcoming box set book collection of his work focusing on futurism, secularism, life extension, politics, philosophy, transhumanism and his early writings. Also included are some of Zoltan's new essays, never published before. Enjoy reading about the future according to Zoltan Istvan.

Transhumanism Simon and Schuster

We live in a genuinely unique period of human history, one in which the alarmist's hackneyed warning that "The end is near!" could actually come true. The world is cluttered with increasingly powerful advanced technologies. Global warming and biodiversity loss are unchecked catastrophes that will likely push society to the brink of collapse. How are we to respond to this situation? What can we do to maximize the probability of a positive outcome for our species? *The End* surveys the expanding wilderness of big-picture hazards before us. It offers a comprehensive and detailed analysis of our evolving existential predicament, which includes risks from synthetic biology, nanotechnology, nuclear weaponry, and (possibly, soon) superintelligence. But understanding the science of risks isn't enough to effectively mitigate them: one must also understand the social, political, and especially religious contexts in which advanced technologies are being developed. *The End* provides this knowledge by showing how faith-based belief in religious eschatologies (or end-times narratives) is inching us ever closer to a secular apocalypse. Action needs to be taken immediately to avert a disaster. The

question is whether humanity will choose reason over faith, observation over revelation, and science over religion.

Fareed Zakaria GPS Book of the Week Weaving together vivid storytelling and groundbreaking science, *The Body Builders* explores the current revolution in human augmentation, which is helping us to triumph over the limitations and constraints we have long accepted as an inevitable part of being human. For millennia, humans have tried—and often failed—to master nature and transcend our limits. But this has started to change. The new scientific frontier is the human body: the greatest engineers of our generation have turned their sights inward, and their work is beginning to revolutionize mankind. In *The Body Builders*, Adam Piore takes us on a fascinating journey into the field of bioengineering—which can be used to reverse engineer, rebuild, and augment human beings—and paints a vivid portrait of the people at its center. Chronicling the ways new technology has retooled our physical expectations and mental processes, Piore visits people who have regrown parts of their fingers and legs in the wake of terrible traumas, tries on a muscle suit that allows him to lift ninety pounds with his fingertips, dips into the race to create “Viagra for the brain,” and shadows the doctors trying to give mute patients the ability to communicate telepathically. As science continues to lay bare the mysteries of human performance, it is helping us to see—and exist—above our expectations. *The Body Builders* will take readers beyond the headlines and the hype to introduce them to the inner workings and the outer reaches of our bodies and minds, and explore how new developments are changing, and will forever change, what is possible for humankind.

Modern humanity with some 5,000 years of recorded history has been experiencing growing pains, with no end in sight. It is high time for humanity to grow up and to transcend itself by embracing transhumanism. Transhumanism offers the most inclusive ideology for all ethnicities and races, the religious and the atheists, conservatives and liberals, the young and the old regardless of socioeconomic status, gender identity, or any other individual qualities. This book expounds on contemporary views and practical advice from more than 70 transhumanists. Astronaut Neil Armstrong said on the Apollo 11 moon landing in 1969, “One small step for a man, one giant leap for mankind.” Transhumanism is the next logical step in the evolution of humankind, and it is the existential solution to the long-term survival of the human race.

A journalist pieces together the mysteries surrounding her ex-husband’s descent into drug addiction while trying to rebuild a life for her family, taking readers on an intimate journey into the world of white-collar drug abuse. “A rare combination of journalistic rigor, personal courage, and writerly grace.” —Bill Clegg, author of *Portrait of an Addict as a Young Man* Something was wrong with Peter. Eilene Zimmerman noticed that her ex-husband looked thin, seemed distracted, and was frequently absent from activities with their children. She thought he looked sick and needed to see a doctor, and indeed, he told her he had been diagnosed with an autoimmune disorder. Yet in many ways, Peter seemed to have it all: a beautiful house by the beach, expensive cars, and other luxuries that came with an affluent life. Eilene assumed his odd behavior was due to stress and overwork—he was a senior partner at a prominent law firm and had been working more than sixty hours a week for the last twenty years. Although they were divorced, Eilene and Peter had been partners and friends for decades, so when she and her children were unable to reach Peter for several days, Eilene went to his house to see if he was OK. So begins *Smacked*, a brilliant and moving memoir of Eilene’s shocking discovery, one that sets her on a journey to find out how a man she knew for nearly thirty years became a drug addict, hiding it so well that neither she nor anyone else in his life suspected what was happening. Eilene discovers that Peter led a secret life, one that started with pills and ended with opioids, cocaine, and methamphetamine. He was also addicted to work; the last call Peter ever made was to dial in to a conference call. Eilene is determined to learn all she can about Peter’s hidden life, and also about drug addiction among ambitious, high-achieving professionals like him. Through extensive research and interviews, she presents a picture of drug dependence today in that moneyed, upwardly mobile world. She also embarks on a journey to re-create her life in the wake of loss, both of the person—and the relationship—that profoundly defined the woman she had become.

If you have ever asked, “Why do people have to die?” then this book is for you. The answer is that no, death is not necessary, inevitable, or good. In fact, death is wrong. Death is the enemy of us all, to be fought with medicine, science, and technology. This book introduces you to the greatest, most challenging, most revolutionary movement to radically extend human lifespans so that you might not have to die at all. You will learn about some amazingly long-lived plants and animals, recent scientific discoveries that point the way toward lengthening lifespans in humans, and simple, powerful arguments that can overcome the common excuses for death. If you have ever thought that death is unjust and should be defeated, you are not alone. Read this book, and become part of the most important quest in human history. This book was written by the philosopher and futurist Gennady Stolyarov II and illustrated by the artist Wendy Stolyarov. It is here to show you that, no matter who you are and what you can do, there is always a way for you to help in humanity’s struggle against death. “I thought the book was fun to read and important in what it tries to accomplish.” - Zoltan Istvan, *Psychology Today*

A blackly comic campus satire combined with a heart-breaking family mystery, *The Falling Sky* brilliantly mixes fiction and astronomy into a fascinating, compelling and moving narrative. Jeanette is a young, solitary post-doctoral researcher who has dedicated her life to studying astronomy. Struggling to compete in a prestigious university department dominated by egos and incompetents, and caught in a cycle of brief and unsatisfying affairs, she travels to a mountain-top observatory in Chile to focus on her research. There Jeanette stumbles upon evidence that will challenge the fundamentals of the universe, drawing her into conflict with her colleagues and the scientific establishment, but also casting her back to the tragic loss that defined her childhood. As the implications of her discovery gather momentum, and her relationships spiral out of control, Jeanette's own grip on reality is threatened, finally forcing her to confront the hidden past. Pippa Goldschmidt's bittersweet debut novel blends black comedy, heart-breaking tragedy and fascinatingly accessible science, in this intricate and beautiful examination of one woman's disintegration and journey to redemption.

The Orphan Conspiracies: 29 Conspiracy Theories from The Orphan Trilogy, written by novelists and filmmakers James Morcan & Lance Morcan with a foreword by leading scientist Dr. Takaaki Musha and an afterword by renowned historian Professor Richard Spence, contains hard-to-find knowledge. This non-fiction book is based on the political, scientific and financial insights in the Morcans' bestselling international thriller series *The Orphan Trilogy* (novels that merge fact with fiction by incorporating real-world theories on public figures and major organizations). Now the authors provide detailed analysis for each one of those controversial theories. In many ways, this exhaustively-researched work is the secret history of the 20th and 21st Centuries. But more than a history, it reveals what is happening right now behind the scenes - in underground bunkers, in the corridors of power, in prime banks and meetings of the world's elite. The Morcans connect the dots between many nefarious events in recent times and strip away the seemingly infinite classified layers of governments and intelligence agencies. Shockingly, they expose a splinter civilization operating in our midst that has at its disposal extraordinary suppressed technologies, unlimited resources and enormous black budgets - all inadvertently financed by everyday taxpayers. Garnering evidence from court cases, declassified government files and mainstream media reports, the authors disclose little-known facts on a wide range of topics. Diverse subjects such as mind control, eugenics, false flag operations, The Queen's hidden assets, secret prisons, The Catcher in the Rye enigma, political assassinations, medical cover-ups, genius learning techniques, Yamashita's Gold, the Jonestown mystery, Americanized Nazis, the bankrupting of Third World nations, underground bases, the US Federal Reserve, the New World Order, forbidden science, the War on Drugs, subliminal messages and even extraterrestrials. The criminals caught like deer in the headlights of these whistleblowing revelations include corrupt officials, racists, secret society members, warmongers, compromised journalists, economic hitmen, modern-day Doctor Franksteins and mysterious individuals rumored to have wealth that would dwarf the net worth of Bill Gates and others on Forbes' so-called Rich Lists. Written from multiple perspectives; at times giving voice to conspiracy theorists; on other occasions siding with sceptics; vacillating between serious investigative writing and tongue-in-cheek, self-deprecating humor - *The Orphan Conspiracies* delivers a balanced exposé of some of the most important issues of our time. In their unflinching quest for truth and justice, the Morcans take no prisoners as they 'subpoena' the global elite - be they banksters, US Presidents, British Royals, Big Pharma, the Vatican, the FBI, the CIA, the Military Industrial Complex or the founders and CEO's of multinational corporations like Facebook, Shell, Google, BP and Microsoft. No suspicious individual or organization is granted immunity in this no-holds-barred trial conducted on behalf of The People. Go beyond rumors and conspiracy theories to documented facts and confirmed reality and find out just how deep the rabbit hole goes..."I expect readers of this book will be surprised by the level of knowledge imparted in its pages, especially with its revelations of exotic technologies, financial injustices, political deceptions and suppressed scientific discoveries. I also expect readers will be inspired by the lifting of the veil that occurs when long-guarded information is absorbed."-Dr. Takaaki Musha, from the Foreword to *The Orphan Conspiracies*

Transhumanism is a recent movement that extols man's right to shape his own evolution, by maximizing the use of scientific technologies, to enhance human physical and intellectual potential. While the name is new, the idea has long been a popular theme of science fiction, featured in such films as *2001: A Space Odyssey*, *Blade Runner*, the *Terminator* series, and more recently, *The Matrix*, *Limitless*, *Her* and *Transcendence*. However, as its adherents hint at in their own publications, transhumanism is an occult project, rooted in Rosicrucianism and Freemasonry, and derived from the Kabbalah, which asserts that humanity is evolving intellectually, towards a point in time when man will become God. Modeled on the medieval legend of the Golem and Frankenstein, they believe man will be able to create life itself, in the form of living machines, or artificial intelligence. Spearheaded by the Cybernetics Group, the project resulted in both the development of the modern computer and MK-Ultra, the CIA's "mind-control" program. MK-Ultra promoted the "mind-expanding" potential of psychedelic drugs, to shape the counterculture of the 1960s, based on the notion that the shamans of ancient times used psychoactive substances, equated with the "apple" of the Tree of Knowledge. And, as revealed in the movie *Lucy*, through the use of "smart drugs," and what transhumanists call "mind uploading," man will be able to merge with the Internet, which is envisioned as the end-point of Kabbalistic evolution, the formation of a collective consciousness, or Global Brain. That awaited moment is what Ray Kurzweil, a director of engineering at Google, refers to as *The Singularity*. By accumulating the total of human knowledge, and providing access to every aspect of human activity, the Internet will supposedly achieve omniscience, becoming the "God" of occultism, or the Masonic All-Seeing Eye of the reverse side of the American dollar bill.

Philosopher, entrepreneur, and former National Geographic and New York Times correspondent Zoltan Istvan presents his visionary novel, *The Transhumanist Wager*, as a seminal statement of our times. Scorned by over 500 publishers and literary agents around the world, his philosophical thriller has been called "revolutionary" and "socially dangerous" by readers, scholars, and religious authorities. The novel debuts a challenging original philosophy, which rebuffs modern civilization by inviting the end of the human species-and declaring the onset of something greater. Set in the present day, the novel tells the story of transhumanist Jethro Knights and his unwavering quest for immortality via science and technology. Fighting against him are fanatical religious groups, economically depressed governments, and mystic Zoe Bach: a dazzling trauma surgeon and the love of his life, whose belief in spirituality and the afterlife is absolute. Exiled from America and reeling from personal tragedy, Knights forges a new nation of willing scientists on the world's largest seasteading project, *Transhumania*. When the world declares war against the floating city, demanding an end to its renegade and godless transhuman experiments and ambitions, Knights strikes back, leaving the planet forever changed.

The ability to imagine is at the heart of what makes us human. Through our imagination we experience more fully the world both around us and within us. Imagination plays a key role in creativity and innovation. Until the seventeenth century, the human imagination was celebrated. Since then, with the emergence of science as the dominant worldview, imagination has been marginalised -- depicted as a way of escaping reality, rather than knowing it more profoundly -- and its significance to our humanity has been downplayed. Yet as we move further into the strange new dimensions of the twenty-first century, the need to regain this lost knowledge seems more necessary than ever before. This insightful and inspiring book argues that, for the sake of our future in the world, we must reclaim the ability to imagine and redress the balance of influence between imagination and science. Through the work of Owen Barfield, Goethe, Henry Corbin, Kathleen Raine, and others, and ranging from the teachings of ancient mystics to the latest developments in neuroscience, *The Lost Knowledge of the Imagination* draws us back to a philosophy and tradition that restores imagination to its rightful place, essential to our knowing reality to the full, and to our very humanity itself.
