Wells is a welcome addition to the conversation. . . Her book makes a strong case for Wells's enduring importance." —Heller McAlpin, The Wall Street Journal From acclaimed literary biographer Claire Tomalin, a complex and fascinating exploration of the early life of the influential writer and public figure H. G. Wells How did the first forty years of H. G. Wells's life shape the father of science fiction? From his impoverished childhood in a working-class English family and determination to educate himself at any cost to his complicated marriages, love affair with socialism, and the serious ill health that dominated his twenties and thirties, H. G. Wells's extraordinary early life would set him on a path to become one of the world's most influential writers. First serialized in 1907 and published in book form in 1908, the novel tells the story of the forward-thinking tinkerer Bert Smallways. Alfred Butteridge is said to be the only English aviator to know the "secret of the flying machine." When Bert Smallways accidentally falls into Butteridge's hot air balloon, he soon finds himself enmeshed in a German plot to bomb New York city. The setting is the outbreak of war as German forces attempt to dominate the air before the Americans can succeed in building a large aerial navy. Wing Commander Frank Brock had accomplished much in his short life. The scion of the world-famous Brock Fireworks company, he is best known as the inventor of the Brock Bullet—the explosive bullet used to destroy German Zeppelins. He also invented the Dover Flares which lit up the sea at night and forced U-boats into deep mine fields. But his exploits went far beyond the engineering lab. As a secret agent Brock dashed to France on his wedding day, snuck into Switzerland, rowed across Lake Constance into enemy territory, and orchestrated the world's first strategic bombing raid at the zeppelin factory in Friedrichshafen, Germany. On the day of his untimely death, he led the charge in a surprise naval attack on Zeebrugge, Belgium, only made possible by the smoke screen he invented to mask their approach. Co-authored by his grandson, Gunpowder and Glory tells more than Brock's amazing life of invention and heroism. Woven into the narrative is the dazzling history of C.T. Brock & Company Fireworks, the world-famous firm started by Frank's five-times great-grandfather.

Coming Up for Air Penguin UK

A sequel to the H.G. Wells classic THE WAR OF THE WORLDS, brilliantly realized by award-winning SF author and Wells expert Stephen Baxter It has been fourteen years since the Martian invasion. Humanity has moved on, always watching the skies but confident that we know how to defeat the alien menace. The Martians are vulnerable to Earth germs. The army is prepared. Our technology has taken great leaps forward, thanks to machinery looted from abandoned war-machines and capsules. So when the signs of launches on Mars are seen, there seems little reason to worry. Unless you listen to one man, Walter Jenkins, the narrator of Wells' book. He is sure that the first incursion was merely a scouting mission, a precursor to the true attack—and that the Martians have learned from their defeat, adapted their methods, and now pose a greater threat than ever before. He is right. Thrust into the chaos of a new worldwide

invasion, journalist Julie Elphinstone—sister in law to Walter Jenkins—struggles to survive the war, report on it, and plan a desperate effort that will be humanity's last chance at survival. Because the massacre of mankind has begun. Echoing the style and form of the original while extrapolating from its events in ingenious, unexpected fashion again and again, The Massacre of Mankind is a labor of love from one of the genre's most praised talents—at once a truly fitting tribute to a classic and brainy, page-turning fun for any science-fiction fan.

After learning of atomic physics, H. G. Wells began to think of its potential impact on human society. In The World Set Free, atomic energy causes massive unemployment, shaking the already fragile social order. The ambitious powers of the world decide to seize the opportunity to compete for dominance, and a world war breaks out, echoing the looming Great War about to ignite in 1914. Waking to the catastrophe, humanity begins the hard search for a way into a better future. The novel traces a soldier, an ex-king, a despot, and a sage through a profound transformation of human society, and we gain a window into Wells' own thoughts and hopes along the way. With one prophetic stroke, Wells gives the first detailed depiction of atomic energy and its potential destructive power, and predicts the use of the air power in modern warfare. He may have even directly influenced the development of nuclear weapons, as the physicist Le ó Szil á rd, shortly after reading the novel in 1932, then conceived of harnessing the neutron chain reaction critical to the development of the atom bomb. When Dr Philip Raven, a diplomat working for the League of Nations, dies in the 1930s, he leaves behind a book of dreams outlining the visions he has been experiencing for many years. These visions seem to be glimpses into the future, detailing events that will

occur on Earth for the next two hundred years. This fictional 'history of the future' proved prescient in many ways, as Wells predicted events such as the Second World War, the rise of chemical warfare, climate change and the growing instability of the Middle East.
