Did H. G. Wells foresee World War One? Or was he just caught up in the frenzy over the recent invention of flying machines? With "The War in the Air" (1908) the frenzy around aircraft was at its peak. Wells simply couldn't help himself but buy into the future. Balloons, heavier flying machines, zeppelins, and many more soar freely throughout this novel, offering a somewhat sinister peek

into what the future may hold. This remarkably progressive book tells the story of the world focusing mostly on Bert Smallways (a minimised Wells self-portrait) who is, rather accidentally it seems, thrown into the middle of the story. A fast- paced, compelling, and futuristic novel perfect for sci-fi and steampunk enthusiasts. H. G. Wells (1866-1946) was an English writer, remembered mostly for his science fiction works. Often described	as a futurist, H. G. Wells's influence cannot be neglected for his works foresaw many technological innovations such as space travel, the atomic bomb, and the Internet. Four times Nobel Prize in Literature nominee, Wells explored a wide array of themes in his works, occupying one of the central seats in the canon of British literature. Some of his best works include the time-travel novel "The Time Machine", the sci- fi adventure novel "The	Island of Dr. Moreau", the mankind-versus- aliens novel "The War of the Worlds" and more than seventy short stories. The War in the Air Open Road Media When penniless businessman Mr Bedford retreats to the Kent coast to write a play, he meets by chance the brilliant Dr Cavor, an absent-minded scientist on the brink of developing a material that blocks gravity. Cavor soon succeeds in his experiments, only to tell a stunned Bedford the invention makes possible one of the oldest dreams of humanity: a journey to the moon. With Bedford motivated by money, and

Cavor by the desire for knowledge, the two embark on the expedition. But neither are prepared for what they find - a world of freezing nights, boiling days and sinister alien life, on which they may be trapped forever.

The Young H. G. Wells

After learning of atomic physics, H. G. Wells began to think of its potential impact on human society. In *The World Set Free*, atomic energy causes massive unemployment, shaking the already fragile social order. The ambitious powers of the world decide to seize the opportunity to compete for dominance, and a

world war breaks out, echoing the looming Great War about to ignite in 1914. Waking to the catastrophe, humanity begins the hard search for a way into a better future. The novel traces a soldier, an ex-king, a despot, and a sage through a profound transformation of human society, and we gain a window into Wells' own thoughts and hopes along the way. With one prophetic stroke, Wells gives the first detailed depiction of atomic energy and its potential destructive power, and predicts the use of the air power in modern warfare. He may have even directly influenced the

development of nuclear weapons, as the physicist Le ó Szil á rd, shortly after reading the novel in 1932, then conceived of harnessing the neutron chain reaction critical to the development of the atom bomb. Items within the box suggest that the baby was entombed early in the nineteenth century, but when another man is also found dead, the

Young H.G. Wells is a welcome addition to the conversation. . . Her book makes a strong case for Wells ' s enduring importance. " —Heller McAlpin, The Wall Street Journal From acclaimed literary biographer Claire Tomalin, a complex and fascinating exploration of the early life of the influential writer and public figure H. G. Wells How did the first forty years of H. G. Wells's life shape the father of science fiction? From his impoverished childhood in	a working-class English family and determination to educate himself at any cost to his complicated marriages, love affair with socialism, and the serious ill health that dominated his twenties and thirties, H. G. Wells's extraordinary early life would set him on a path to become one of the world's most influential writers. The sudden success of The Time Machine and The War of the Worlds transformed his life and catapulted him to international fame; he	became the writer who most inspired Orwell and countless others and predicted men walking on the moon seventy years before it happened. In this remarkable, empathetic biography, Claire Tomalin paints a fascinating portrait of a man like no other, driven by curiosity and desiring reform, a socialist and a futurist whose new and imaginative worlds continue to inspire today. use of airplanes in warfare and the coming of World War I. First serialized in 1907 and published in book form in 1908, the novel tells the story of the forward-thinking tinkerer Bert Smallways. Alfred Butteridge is said to be the only English aviator to know the "secret of the flying machine." When Bert Smallways accidentally falls into Butteridge's hot air balloon, he soon finds himself enmeshed in a German plot to bomb New York city. The setting is the outbreak of war as German forces attempt to dominate the air before the

Americans can succeed in building a large aerial navy. On the other side of the United States tensions with the "Confederation of Eastern Asia", an allegiance between China and Japan, compound into full scale war, leaving the U.S. to fight on both eastern and western fronts, on sea and in the air.

When Dr Philip Raven, a diplomat working for the League of Nations, dies in the 1930s, he leaves behind a book of dreams outlining the visions he

has been experiencing for many years. These visions seem to be glimpses into the future, detailing events that will occur on Earth for the next two hundred years. This fictional 'history of the future' proved prescient in many ways, as Wells predicted events such as the Second World War, the rise of chemical warfare, climate change and the growing instability of the Middle East.

The reader should grasp clearly the date at which this book was written. It was done in 1907: it appeared in various magazines as a serial in 1908 and it was published in the Fall of that year. At that time the aeroplane was, for most people, merely a rumour and the "Sausage" held the air. The contemporary reader

has all the advantage of ten years' experience since this story was imagined. He can correct his author at a dozen points and estimate the value of these warnings by the standard of a decade of realities. The book is weak on anti-aircraft guns, for example, and still more negligent of submarines. Much, no doubt, will strike the reader as quaint and limited but upon much the writer may not unreasonably plume himself. The

interpretation of the German spirit must have read as a caricature in 1908. Was it a caricature? Prince Karl seemed a fantasy then. Reality has since copied Prince Carl with an astonishing faithfulness. Is it too much to hope that some democratic "Bert" may not ultimately get even with his Highness? Our author tells us in this book, as he has told us in others, more especially in *The World Set Free*, and as he has been telling us this year in his *War and*

the Future, that if mankind goes on with war, the smash-up of civilization is inevitable. It is chaos or the United States of the World for mankind. There is no other choice. Ten years have but added an enormous conviction to the message of this book. It remains essentially right, a pamphlet story--in support of the League to Enforce Peace. K.

One saw Monson's Flying Machine from the windows of the trains passing either along the South-Western main line or along the line between Wimbledon and Worcester Park,—to be more exact, one saw the huge scaffoldings which

limited the flight of the apparatus. They rose over the tree-tops, a massive alley of interlacing iron and timber, and an enormous web of ropes and tackle, extending the best part of two miles. From the Leatherhead branch this alley was foreshortened and in part hidden by a hill with villas; but from the main line one had it in profile, a complex tangle of girders and curving bars, very impressive to the excursionists from Portsmouth and Southampton and the West.

whose efforts saved countless lives during WWI. Though he only lived to be 33, Wing Commander Frank Brock had accomplished much in his short life. The scion of the world-famous Brock Fireworks company, he is best known as the inventor of the Brock Bullet—the explosive bullet used to destroy German Zeppelins. He also invented the Dover Flares which lit up the sea at night and forced U-boats into deep mine fields. But his exploits went far beyond the engineering lab. As a secret agent Brock dashed to France on his wedding day,

snuck into Switzerland, rowed across Lake Constance into enemy territory, and orchestrated the world's first strategic bombing raid at the zeppelin factory in Friedrichshafen, Germany. On the day of his untimely death, he led the charge in a surprise naval attack on Zeebrugge, Belgium, only made possible by the smoke screen he invented to mask their approach. Co-authored by his grandson, Gunpowder and Glory tells more than Brock's amazing life of invention and heroism. Woven into the narrative is the dazzling history of C.T.

Brock & Company Fireworks, the world-famous firm started by Frank's five-times great-grandfather.
