You can help prevent math anxiety by giving your children the mental tools they need to conquer story problems. Young children expect to look at a word problem and instantly see the answer. But as they get older, their textbook math problems also grow in difficulty, so this solution-by-intuitive-leap becomes impossible. Too often the frustrated child concludes, "I'm just not good at math." But with practice, any student can learn to master word problems. *Word Problems from Literature* features math puzzles for elementary and middle school students inspired by classic books such as Mr. Popper's Penguins and *The Hobbit*. Denise Gaskins demonstrates step by step how to solve these problems--and how to build a strong foundation of problem-solving skills that can handle any situation. And when you finish the puzzles in this book, Denise shows you how to create your own word problems from literature, using your child's favorite story worlds. You'll love this book, because it prepares your children for mathematical success. Order your copy of *Word Problems from Literature* today. * * * If you're using these word problems with your children, check out the companion *Word Problems Student Workbook: Word Problems from Literature*.

Engineering and Design: Structural Deformation Surveying (Engineer Manual Em 1110-2-1009) New Age International

As the price of oil climbs toward \$100 a barrel, our impending post-fossil fuel future appears to offer two alternatives: a bleak existence defined by scarcity and sacrifice or one in which humanity places its faith in technological solutions with unforeseen consequences. Are there other ways to imagine life in an era that will be characterized by resource depletion? The French intellectual Georges Bataille saw energy as the basis of all human activity—the essence of the human—and he envisioned a society that, instead of renouncing profligate spending, would embrace a more radical type of energy expenditure: la dpense, or “spending without return.” In *Bataille's Peak*, Allan Stoekl demonstrates how a close reading of Bataille—in the wake of Giordano Bruno and the Marquis de Sade— can help us rethink not only energy and consumption, but also such related topics as the city, the body, eroticism, and religion. Through these cases, Stoekl identifies the differences between waste, which Bataille condemned, and expenditure, which he celebrated. The challenge of living in the twenty-first century, Stoekl argues, will be to comprehend—without recourse to austerity and self-denial—the inevitable and necessary shift from a civilization founded on waste to one based on Bataillean expenditure. Allan Stoekl is professor of French and comparative literature at Penn State University. He is the author of *Agonies of the Intellectual: Commitment, Subjectivity, and the Performative in the Twentieth-Century French Tradition* and translator of Bataille's *Visions of Excess: Selected Writings, 1927–1939* (Minnesota, 1985).

Elements of Surveying Knopf

Engineering surveying involves determining the position of natural and man-made features on or beneath the Earth's surface and utilizing these features in the planning, design and construction of works. It is a critical part of any engineering project. Without an accurate understanding of the size, shape and nature of the site the project risks expensive and time-consuming errors or even catastrophic failure. This fully updated sixth edition of *Engineering Surveying* covers all the basic principles and practice of the fundamentals such as vertical control, distance, angles and position right through to the most modern technologies. It includes: * An introduction to geodesy to facilitate greater understanding of satellite systems * A fully updated chapter on GPS, GLONASS and GALILEO for satellite positioning in surveying * All new chapter on the important subject of rigorous estimation of control coordinates * Detailed material on mass data methods of photogrammetry and laser scanning and the role of inertial technology in them With many worked examples and illustrations of tools and techniques, it suits students and professionals alike involved in surveying, civil, structural and mining engineering, and related areas such as geography and mapping.
