According to many introductory psychology textbooks, Westerners are placing an increasingly high value on the welfare of their children. This humanistic cultural shift has not found its way into developmental psychology courses at the college level, leaving a vital gap in curriculum at many universities. Until now. From a fresh, holistic perspective, psychology professor Eugene M. DeRobertis applies humanistic viewpoints in psychology to the study of child development. Unlike most child development texts that concentrate on the subdivisions of the child's personality, the observations and discussions here focus on the child as a whole. Drawing upon many schools of thought including American humanism, existential-phenomenology, psychoanalysis, neo-analytic theories, object-relations theory, self-psychology, and Gestalt psychology, Dr. DeRobertis opens an important dialogue to all teachers and students of psychology. Packed with illustrations, empirical findings, references, and key terms and concepts, *Humanizing Child Developmental Theory* delivers an overarching theoretical framework for putting developmental issues into context. A significant and accessible contribution to developmental theorizing, this groundbreaking text gives psychology instructors and their students a relevant and much-needed humanistic approach to child development.

The enhanced 4th Edition of Goodwin's series, *A History of Modern Psychology*, explores the modern history of psychology including the fundamental bases of psychology and psychology's advancements in the 20th century. Goodwin, Ph.D. in experimental psychology, has a true passion for the history of experimental psychology. Strengths of the text include his conversational writing style and attention to recent scholarship in the history of psychology. Goodwin's 4th Edition focuses on the reduction of biographical information with an emphasis on more substantial information including ideas and concepts and on ideas/research contributions; more history on the applied areas of psychology; condensed chapters, philosophical antecedents and physiological antecedents; and more psychology's history in the 20th century.

"Introduction "Why do you do that?" "Why does our family insist on doing things that way?" Questions

about people's behaviors are the essence of social science inquiry. The focus may be on individuals, families, social groups, communities, or cultures. To engage in the process of social science inquiry, you need two things: research and theory. Before we enter into a discussion of social science theory, specifically family theory, we first must have a discussion about theory in general"--

[Studyguide for Theories of Development](#) The Guilford Press

This volume brings together the latest research from leading scholars on the mental lexicon - the representation of language in the mind/brain at the level of individual words and meaningful sub-word units. In recent years, the study of words as mental objects has grown rapidly across several fields, including linguistics, psychology, philosophy, neuroscience, education, and cognitive science. This comprehensive collection spans multiple disciplines, topics, theories, and methods to highlight important advances in the study of the mental lexicon, identify areas of debate, and inspire innovation in the field from present and future generations of scholars. The book is divided into three parts. Part I presents modern linguistic and cognitive theories of how the mind/brain represents words at the phonological, morphological, syntactic, semantic, and pragmatic levels. This part also discusses broad architectural issues pertaining to the internal organization of the lexicon, the relation between words and concepts, and the role of compositionality. Part II examines how children learn the form and meaning of words in their native language, bridging learner- and environment-driven contributions and taking into account variability across both individual learners and communities. Chapters in the final part explore how the mental lexicon contributes to language use during listening, speaking, and conversation, and includes perspectives from bilingualism, sign languages, and disorders of lexical access and production.

Is children's language acquisition based on innate linguistic structures or built from cognitive and communicative skills? This book summarises the major theoretical debates in all of the core domains of child language acquisition research (phonology, word-learning, inflectional morphology, syntax and binding) and includes a complete introduction to the two major contrasting theoretical approaches: generativist and constructivist. For each debate, the predictions of the competing accounts are closely and even-handedly evaluated against the empirical data. The result is an evidence-based review of the central issues in language acquisition research that will constitute a valuable resource for students, teachers, course-builders and researchers alike.

Now in a revised and expanded second edition, this indispensable clinical resource and text helps readers understand the latest developmental knowledge and apply it in their work with children and families. The book begins with a framework elucidating the transactions between individual development and the child's wider environment, and emphasizing the crucial role of attachment. Key developmental processes and tasks from infancy through middle childhood are then discussed in paired chapters that respectively address how children of different ages typically feel, think, and behave, and how to intervene effectively with those who are having difficulties. Ideally structured for classroom use, the second edition has been updated throughout to reflect current research, practice advances, and policy issues. Included are an important new chapter on the developing brain and expanded coverage of applications for child care and school settings.

This book covers twenty-two theories of development and their implication on education. It also introduces readers to the theorists behind the theories in a lively and easily accessible manner. Comparing and contrasting the theories covered, the book focuses on theorists who follow the developmental tradition of Rousseau - such as Gesell, Piaget, and Montessori - and their belief that we grow largely from our inner promptings and spontaneous discoveries at different times throughout our lifetimes. In addition, the author looks at theorists in the environmental/learning tradition. For anyone interested in the philosophy of child rearing and education, relative to a child's growth and the growth of our society as a

From reviews of the First Edition: "[W]ell written with a clear focus on the undergraduate audience, it covers a wide range of relevant topics that undergraduates are interested in, it makes human development theories accessible to undergraduates, and it integrates multiple cultural lenses ... I absolutely love it compared to the other options on the market in this field." -- Michelle Tichy, University of Northern Iowa "The writing style is excellent! ...The Introductory 'What would you do' scenarios are great for stimulating critical thinking at the beginning of the class discussions. . . . 'Connecting with Children' sections provide helpful guidelines for teachers, families and other professionals. . . . [The text makes an] intentional effort to cover diversity and culture." -- Winnie Mucherah, Ball State University "One of the reasons I changed to this text was the very clear and interesting writing style. I found myself absorbed in the information even though I have been using these types of texts for decades. The level is appropriate for the students. In addition, if a topic is introduced, it is presented in some depth. . . . There is a great deal of material on practical considerations related to parenting and teaching as well as to cross-cultural issues and diversity. Topics are covered thoroughly and related to one another. I also like the layout of the material in terms of how it appears on the page, ease of reading the print, etc." -- Sandra Twardosz, University of Tennessee, Knoxville

Concepts and Theories of Human Development Pearson Higher Ed

This book brings together recent research on interpersonal relationships in education from a variety of perspectives including research from Europe, North America and Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book comprises. The volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the relationships between teachers and their professional colleagues.
