Theories of Personality Cengage Learning

This unique workbook was written for the undergraduate Personality course where professors are looking for activities to help students learn and apply personality theories to real-life examples. The workbook is geared toward personality courses that are theories-based, as opposed to research-based. Because the cases explored are those based on normal behavior (as opposed to abnormal behavior), this workbook is especially useful. While most personality texts present the major concepts of personality theories, they don't help students apply the theories they have learned or to use the theories to understand other examples on their own. This workbook will help students do just that and is the perfect complement to any Personality text. 6th Edition Cengage Learning

This seventh edition of 'Theories of Personality' continues to provide comprehensive coverage of the most influential theorists of personality.

Theory and Practice of Counseling and Psychotherapy W.H. Freeman

This market-leading text emphasizes future consumers of psychological research, uses real-world examples drawn from popular media, and develops students' critical-thinking skills as they become systematic interrogators of information in their everyday lives.

Organized by theory, this popular text discusses major theorists who represent psychoanalytic, neopsychoanalytic, lifespan, trait, humanistic, cognitive, behavioral, and social-learning approaches, while demonstrating the influence of events in theorists' personal and professional lives on the development of these theories. The book also explores the ways in which race, gender, and cultural issues play a part in the study of personality and in personality assessment, and includes numerous examples, tables, and figures that further enhance students' understanding of the content. The final chapter, Personality in Perspective, integrates topics explored in previous chapters and suggests conclusions that can be drawn from the many theorists' work. The Scientific and Practical Explorations of Human Strengths

Theories of Personality" What makes people behave as they do? Are people ordinarily aware of what they are doing, or are their behaviors the result of hidden, unconscious motives? Are some people naturally good and others basically evil? Or do all people have potential to be either good or evil? Is human conduct largely a product of nature, or is it shaped mostly by environmental influences? Can people freely choose to mold their personality, or are their lives determined by forces beyond their control? Are people best described by their similarities, or is uniqueness the dominant characteristic of humans? What causes some people to develop disordered personalities whereas others seem to grow toward psychological health? These questions have been asked and debated by philosophers, scholars, and religious thinkers for several thousand years; but most of these discussions were based on personal opinions that were colored by political, economic, religious, and social considerations. Then, near the end of the 19th century, some progress was made in humanity's ability to organize, explain, and predict its own actions. The emergence of psychology as the scientific study of human behavior marked the beginning of a more systematic approach to the study of human personality. This edition continues to emphasize the strong and unique

features of earlier editions, namely the overviews near the beginning of each chapter, a lively writing style, the thought-provoking concepts of humanity as seen by each theorist, and the structured evaluations of each theory"--Theories of Personality Presenting coverage of the major theorists who represent different aspects of the approaches to personality, this text also looks at the study of personality theories, suggesting conclusions that can be drawn from many theorists' work.

Personality Theories: Critical Perspectives is the groundbreaking, final text written by Albert Ellis, long considered the founder of cognitive behavioral therapies. The book provides students with supporting and contradictory evidence for the development of personality theories through time. Without condemning the founding theorists who came before him, Ellis builds on more than a century of psychological research to re-examine the theories of Freud, Jung, and Adler while taking an equally critical look at modern, research-based theories, including his own.

Thoroughly updated to include the latest research available, THEORIES OF PERSONALITY, 10E takes a unique theory by theory approach that carefully guides students through major theories on their way to a comprehensive understanding of personality. Richard Ryckman's student-friendly writing style offers a straightforward presentation of major theories, helping readers more easily distinguish between them. The text begins by providing a framework that defines personality and emphasizes the science of personality--including the interrelation between research and theory. Next it introduces each major theoretical position with an objective overview of the theorist's basic concepts and principles. It concludes by noting the ways in which the different theories stimulate additional research efforts and by presenting five current research trends resulting from the work of these earlier theorists. The result is a text that merges the best of classic and contemporary research to equip students with a solid working knowledge of personality. "A significant contribution to understanding the interaction among teachers, students, the environment, and the content of learning" (Herbert Kohl, education advocate and author). What is at work in the mind of a five-year-old explaining the game of tag to a new friend? What is going on

in the head of a thirty-five-year-old parent showing a first-grader how to button a coat? And what exactly is happening in the brain of a sixty-five-year-old professor discussing statistics with a room full of graduate students? While research about the nature and science of learning abounds, shockingly few insights into how and why humans teach have emerged--until now. Countering the dated yet widely held presumption that teaching is simply the transfer of knowledge from one person to another, The Teaching Brain weaves together scientific research and real-life examples to show that teaching is a dynamic interaction and an evolutionary cognitive skill that develops from birth to adulthood. With engaging, accessible prose, Harvard researcher Vanessa Rodriguez reveals what it actually takes to become an expert teacher. At a time when all sides of the teaching debate tirelessly seek to define good teaching--or even how to build a better teacher--The Teaching Brain upends the misguided premises for how we measure the success of teachers. "A thoughtful analysis of current educational paradigms . . . Rodriguez's case for altering pedagogy to match the fluctuating dynamic forces in the classroom is both convincing and steeped in common sense." --Publishers Weekly

Incorporating the thinking, feeling, and behaving dimensions of human experience, the tenth edition of Corey's best-selling book helps students compare and contrast the therapeutic models expressed in counseling theories. Corey introduces students to the major theories (psychoanalytic, Adlerian, existential, person-centered, Gestalt, reality, behavior, cognitive-behavior, family systems, feminist, postmodern, and integrative approaches) and demonstrates how each theory can be applied to two cases (Stan and Gwen). With his trademark style, he shows students how to apply those theories in practice, and helps them learn to integrate the theories into an individualized counseling style.

In early 1994 Marina Warner delivered the prestigious Reith Lectures for the BBC. In a series of six lectures, she takes areas of contemporary concern and relates them to stories from mythology and fairy tale which continue to grip the modern imagination. She analyses the fury about single mothers and the anxiety about masculinity in the light of ideals about male heroism and control; the current despair about children and the loss of childhood innocence; the changing attitude of myths about wild men and beasts and the undertow of racism which is expressed in myths about savages and cannibals. The last lecture, on home, brings the themes together to examine ideas about who we are and where we belong, with reference to the British nation and its way of telling its own history. Using a range of examples from video games to Turner's paintings, from popular films to Keats, Marina Warner interweaves her critique of fantasy, dream and prejudice.
