Seminar paper from the year 2013 in the subject Sociology - Individual, Groups, Society, grade: A, The University of Liverpool, language: English, abstract: Trait theory was developed from the concept of trait which simply describes the characteristic behavior of individuals thus their personality. Trait encompasses all aspects of how individuals perceive, believe and feel about things. This is what distinguishes individuals from one another. Trait theories are therefore concerned with understanding the differences in peoples' personality and with establishing the causes of these perceived differences. Although different theories have been developed by different people, they are all based on the following assumptions: people genetically inherit traits from their biological parents; some traits are predominantly suited for leadership; and people who make good leaders have the correct if not sufficient combination of traits (Digman, 1990). It is through these assumptions that this theory has formed a good basis for selection of leaders thus a very important discipline in management. This essay therefore seeks to discuss 'five factor' trait theory highlighting some of the advantages and disadvantages of using such a theory to select leaders in the workforce. Unlike the traditional psychological researches, contemporary psychological researchers in personality have managed to come up with a more comprehensive and empirical model for analyzing personality traits known as 'the five factor' or the 'big five' theory (Digman, 1990). The 'five factor' theory is a five factor model with broad categories of personality traits, each category having its distinct behavioral characteristics associated with them. Though the theory is new, the five factor model has proved to be one of the most practical and applicable model in studying human personality and has thus been accorded critical attention (Digman 1990)

While most personality texts present the major concepts of personality theories, this workbook enables them to understand examples and use the theories on their own. Case studies accompanied by questions guide students through an analysis of the case and encourage them to consider how a particular theorist would view it.

The success of this best-selling text lies in the author's belief that a good text talks with, rather than at, its readers. Shaffer does an extraordinary job of anticipating students' interests, questions, and concerns while treating them as active participants in the process of learning about social and personality development. The Fifth edition of SOCIAL AND PERSONALITY DEVELOPMENT features clearly written, current coverage of social and personality development that aids students in discovering the causes, processes, and complexities that underlie developmental change. Designed to guide students toward a comprehensive understanding of major personality theories, Ryckman provides a theory-by-theory approach that helps students develop the skills needed to critically evaluate personality theories. In the beginning of the book, Ryckman defines personality, provides basic information concerning the scientific process, including the interrelatedness of theory and research, and offers the criteria scientists use in judging the worth of theories. Then, chapter by chapter, he introduces each major theoretical position with an objective overview of the theorists' basic concepts and principles. The final chapter highlights the heuristic value of the theories, noting the many ways in which they act as stimulants to the thinking and research efforts of contemporary personality psychologists. Ryckman finishes by presenting five current trends in personality theory and research, which are largely the result of stimulation by the theorists covered in the text.
