Trucking Country is a social history of long-haul trucking that explores the contentious politics of free-market capitalism in post-World War II America. Shane Hamilton paints an eye-opening portrait of the rural highways of the American heartland, and in doing so explains why working-class populist voters are drawn to conservative politicians who seemingly don't represent their financial interests. Hamilton challenges the popular notion of "red state" conservatism as a devil's bargain between culturally conservative rural workers and economically conservative demagogues in the Republican Party. The roots of rural conservatism, Hamilton demonstrates, took hold long before the culture wars and free-market fanaticism of the 1990s. As Hamilton shows, truckers helped build an economic order that brought low-priced consumer goods to a greater number of Americans. They piloted the big rigs that linked America's factory farms and agribusiness food processors to suburban supermarkets across the country. Trucking Country is the gripping account of truckers whose support of post-New Deal free enterprise was so virulent that it sparked violent highway blockades in the 1970s. It's the story of "bandit" drivers who inspired country songwriters and Hollywood filmmakers to celebrate the "last American cowboy," and of ordinary blue-collar workers who helped make possible the deregulatory policies of Jimmy Carter and Ronald Reagan and set the stage for Wal-Mart to become America's most powerful corporation in today's low-price, low-wage economy. Now in its fourth edition, this respected text delivers a comprehensive introduction to the principles and practice of refrigeration. Clear and straightforward, it is designed for students (NVQ/vocational level) and professional HVAC engineers, including those on short or CPD courses. Inexperienced readers are provided with a

comprehensive introduction to the fundamentals of the technology. With its concise style yet broad sweep the book covers most of the applications professionals will encounter, enabling them to understand, specify, commission, use and maintain these systems. Many readers will appreciate the clarity with which the book covers the subject without swamping them with detailed technical or product specific information. New material in this edition includes the latest developments in refrigerants and lubricants, together with updated information on compressors, heat exchangers, liquid chillers, electronic expansion valves, controls and cold storage. Topics also covered include efficiency, environmental impact, split systems, retail refrigeration (supermarket systems and cold rooms), industrial systems, fans, air infiltration and noise. Author Information Guy Hundy studied Mechanical Engineering at Leeds University, UK. He started his career in the refrigeration industry with J & E Hall Ltd, Dartford. In 1985 he joined Copeland Europe and in 1998 he was appointed Director, Application Engineering, Copeland Europe. He has authored and co-authored papers and articles on compressors, applications and refrigerant changeover topics. Guy Hundy is a Chartered Engineer and works as a Technical Consultant. He is past - President of the Institute of Refrigeration. Covers principles, methods and application of refrigeration, air conditioning and heat pumps in a concise volume, without the encumbrance of handbook information found in other volumes Ideal for students, and professionals in other disciplines, not too theoretical but with sufficient depth to give an understanding of the issues, this book takes the reader from the fundamentals, through to system design, applications, contract specifications and maintenance Full revision by Guy Hundy with new diagrams and illustrations
