The Dynamics of Heat: A Unified Approach to Thermodynamics ...

The Second Law of Thermodynamics implies that heat will not transfer from a colder to a hotter body without some external source of energy.

Conduction involves the transfer of heat by the interactions of atoms or molecules of a material through which the heat is being transferred.

Thermodynamics And Heat Transfer Solution

Previous knowledge of thermodynamics is not required, but the reader should be familiar with basic electricity, mechanics, and chemistry and should have some knowledge of elementary calculus. The special feature of the first edition -- the integration of thermodynamics, heat transfer, and chemical processes -- has been maintained and strengthened.
