Engineering Fluid Mechanics guides students from theory to application, emphasizing critical thinking, problem solving, estimation, and other vital engineering skills. Clear, accessible writing puts the focus on essential concepts, while abundant illustrations, charts, diagrams, and examples illustrate complex topics and highlight the physical reality of fluid dynamics applications. Over 1,000 chapter problems provide the “deliberate practice” —with feedback—that leads to material mastery, and discussion of real-world applications provides a frame of reference that enhances student comprehension. The study of fluid mechanics pulls from chemistry, physics, statics, and calculus to describe the behavior of liquid matter; as a strong foundation in these concepts is essential across a variety of engineering fields, this text likewise pulls from civil engineering, mechanical engineering, chemical engineering, and more to provide a broadly relevant, immediately practicable knowledge base. Written by a team of educators

who are also practicing engineers, this book merges effective pedagogy with professional perspective to help today’s students become tomorrow’s skillful engineers.

Al Biruni, one of the greatest Arab scholars, was born on September 4, 973, in what is now Uzbekistan. He showed talent at an early age and by his early 20's had written several acclaimed papers. Political unrest in his 20's and 30's found him at one point at Gurgan, on the shores of the Caspian Sea. Peace found him in Ghaznah, which is today in Afghanistan. From 1017 to 1030 he travelled extensively in India, becoming fluent in Sanskrit. From this he wrote his monumental survey, India, of the history, customs and beliefs of the subcontinent. His other books include The Chronology of Ancient Nations, the Masudic Cannon, Book of Instructions, and more than 100 others, some of which are lost. He died on December 13, 1048, aged 75.

He is buried in Ghaznah. The Book of Instruction in the Elements of the Art of Astrology was written for Lady Rayhanah, to whom it is dedicated. R. Ramsay Wright, the translator, said it could be regarded as a primer of 11th century science. Among its highlights are a comprehensive list of more than 150 Lots, various forms of aspects and planetary relationships, planetary positions relative to the sun, an excellent text on rulerships as well as comprehensive notes on weather and meteorological phenomena. This book was unknown to medieval European astrologers. This edition, comprising the astrological part of the original (sections 347-530) has been taken from Wright's pioneering 1934 translation, itself taken from Persian and Arabic sources. For this edition, text and tables have been reset, and a new index added.

Cosmogony, Theogony and Anthropogeny in Sumerian Texts Signet Book

The main objective of the book is to allocate the grass roots initiatives of remembering the Holocaust victims in a particular region of Russia which has a very diverse ethnic structure and little presence of Jews at the same time. It aims to find out how such individual initiatives correspond to the official Russian hero-orientated concept of remembering the Second World war with almost no attention to the memory of war victims, including Holocaust victims. North Caucasus became the last address of thousands of Soviet Jews, both evacuees and locals. While there was almost no attention paid to the Holocaust victims in the official Soviet propaganda in the postwar period, local activists and historians together with the members of Jewish communities preserved Holocaust memory by installing small obelisks at the killing sites, writing novels and making documentaries, teaching about the Holocaust at schools and making small thematic exhibitions in the local and school museums. Individual types of grass roots activities in the region on remembering Holocaust victims are analyzed in each chapter of the book.

This is the first book to deal with automatic diatom

identification. It provides the necessary background information concerning diatom research, useful for both diatomists and non-diatomists. It deals with the development of electronic databases, image preprocessing, automatic contour extraction, the application of existing contour and ornamentation features and the development of new ones, as well as the application of different classifiers (neural networks, decision trees, etc.). These are tested using two image sets: (i) a very difficult set of Sellaphora pupula with 6 demes and 120 images; (ii) a mixed genera set with 37 taxa and approximately 800 images. The results are excellent, and recognition rates well above 90% have been achieved on both sets. The results are compared with identification rates obtained by human experts. One chapter of the book deals with automatic image capture, i.e. microscope slide scanning at different resolutions using a motorized microscope stage, autofocus, multifocus fusion, and particle screening to select only diatoms and to reject debris. This book is the final scientific report of the European ADIAC project (Automatic Diatom Identification and Classification), and it lists the websites with the created public databases and an identification demo.
