English has several periphrastic verbal forms that are semantically close to particular modal verbs and perform suppletive functions in relation to them. After an exploration of the properties of potential periphrastic forms, this study investigates the nature of the relationship between the modals must, should, will and can and various semantically close periphrastics. The focus is on the pragmatic interpretation of the items compared, with some attention to their functions in discourse. Despite the relative idiosyncrasy of all these items, the general marked status of periphrastics is evident, and this is shown to be reflected in a number of different ways. Level of formality is a further differentiating factor here.

The teaching of Latin remained important after the Conquest but Anglo-Norman now became a language of instruction and, from the thirteenth century onwards, a language to be learned. During this period English lexicographers were more numerous, more identifiable and their works more varied, for example: the tremulous hand of Worcester created an Old English-Latin glossary, and Walter de Bibbesworth wrote a popular contextualized verse vocabulary of Anglo-Norman country life and activities. The works and techniques of Latin scholars such as Adam of Petit Point, Alexander Nequam,

and John of Garland were influential throughout the period. In addition, grammarians' and schoolmasters' books preserve material which in some cases seems to have been written by them. The material discussed ranges from a twelfth-century glossary written at a minor monastic house to four large alphabetical fifteenth-century dictionaries, some of which were widely available. Some material seems to connect with the much earlier Old English glossaries in ways not yet fully understood.

The series publishes state-of-the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. The series considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language.

The new and updated third edition of this highly successful textbook contains an additional chapter that presents modern empirical research methods in the form of exemplary small-scale studies. In these projects the authors invite the reader to develop and address research questions from phonetics/phonology, morphology and syntax. The pertinent experimental and corpus-linguistic techniques are introduced and students are familiarized with some basic statistical tools necessary for the analysis of the data. The major difference between this book and its potential competitors lies in its hands-on didactic orientation, with a strong focus on linguistic analysis and argumentation. Language and linguistic theory are approached from a strictly empirical perspective: given a certain set of data to be accounted for, theoretical and methodological problems must be solved in order to analyze and understand the data properly. The book is not written from the perspective of a particular theoretical framework and draws on insights from various research traditions. Introduction to English Linguistics concentrates on gaining expertise and analytical skills in the traditional core areas of linguistics, i.e. phonology, morphology, syntax, semantics and pragmatics. The chapter on "Extensions and applications" widens the perspective to other areas of linguistic research, such as historical, socio- and psycholinguistics. Each chapter is accompanied by exercises and suggestions for further reading. A glossary and an index facilitate access to terms and topics.

Guiding learners to acquire sufficient knowledge of grammar constitutes an interesting domain in the field of teaching English as a second language. This research-based resource book focuses on the learning of English tenses and verbal categories, which forms a huge and fascinating component of English grammar that merits attention in teachers' attempts to improve their students' English proficiency. Inspired by concepts relating to explicit learning, consciousness raising, contrastive analysis and error analysis, the author used a wealth of data derived from a set of elicitation procedures to reveal the linguistic interference encountered by second language learners. Arguing for the need to conceptualise grammatical rules positively, this inquiry focuses on studying learners' wide-ranging responses to a large number of items designed to explore linguistic interference in the learning of English verb forms in eight major categories. The findings, explanations and illustration-based recommendations provided in this volume will give trainee teachers, instructors and researchers deeper insights into how strategies can be aptly employed to enhance learners' performance in using English verb forms and related grammatical categories, which constitute a key dimension in the learning and teaching of English as a second language.

Time being money," quite as much to the professional as it is to the mercantile man, the author has endeavoured in the accompanying monograph not only to condense his material, but to exclude the consideration of any question not directly bearing upon the pathology or treatment of jaundice; indeed, as stated in the Introduction, one of the chief objects of the author having been to point out how valuable an adjunct modern physiological, and chemical knowledge is in the diagnosis, and treatment of hepatic and pancreatic disease, he has neither dwelt on the literature nor discussed the old theories of the mechanism of jaundice, but limited himself almost entirely to a brief exposition of his own views. For the sake of brevity, he has at page 132 put into a tabular form the pathology of jaundice, according to the opinions expressed in the body of the volume.
