In the sixties, Thomson Reuters invented the journal "impact factor." After using journal statistical data in-house to compile the Science Citation Index® (SCI®) for many years, Thomson Reuters

began to publish Journal Citation Reports® (JCR®) in 1975 as part of the SCI and the Social Sciences Citation Index® (SSCI®).

### **Impact factors (Thomson Reuters) - Citation and Journal ...**

The impact factor or journal impact factor of an academic journal is a scientometric index that reflects the yearly average number of citations that recent articles published in a given journal received. It is frequently used as a proxy for the relative importance of a journal within its field; journals with higher impact factors are often deemed to be more important than those with lower ones.

**Thomson Reuters Journal Impact Factor**

The annual JCR impact factor is a ratio between citations and recent citable items published. Thus, the impact factor of a journal is calculated by dividing the number of current year citations to the source items published in that journal during the previous two years (see Figure 1).

The Journal Impact Factor should be used with informed peer review. In the case of academic evaluation for tenure, it is sometimes inappropriate to use the impact of the source journal to estimate the expected frequency of a recently published article. Again, the Journal Impact Factor should be used with informed peer review.

### **Impact factor - Wikipedia**

Science Citation Index by Thomson-Reuters. In existence since 1964, the Science Citation Index contains only a selection, from within the Science Citation Index Expanded, of the most highly cited, highest impact journals in each category. Journals selected in the SCI are considered the top journals in their subject category.
