Introducing Computing Broadway  
This book exposes a migration of business practices, players, and norms into philanthropy that strains the regulatory regime sustaining public trust in elite generosity through accountability and transparency and proposes legal reforms and private solutions to restore it. Practices, players, and norms native to the business sector have migrated into philanthropy, shattering longstanding barriers between commerce and charity. Philanthropies organized as limited liability companies, donor-advised funds sponsored by investment

company giants, and strategic corporate philanthropy programs aligning charitable giving by multinationals with their business objectives paint a startling new picture of elite giving. In For-Profit Philanthropy, Dana Brakman Reiser and Steven A. Dean reveal that philanthropy law has long operated as strategic compromise, binding ordinary Americans and elites together in a common purpose. At its center stands the private foundation. The authors show how the foundation neatly combines donor autonomy with a regulatory framework to elevate the public's voice. This framework compels foundations to spend a small but meaningful portion of the assets their elite donors have pledged to the public each year. Prophylactic restrictions separate foundations from their funders' business and political interests. And foundations

---

must disclose more about the sources and uses of their assets than any other business or charity. The philanthropic innovations increasingly espoused by America's most privileged individuals and powerful companies prioritize donor autonomy and privacy, casting aside the foundation and the tools it provides elites to demonstrate their good faith. By threatening to displace impactful charity with hollow virtue signaling, these actions also jeopardize the public's faith in the generosity of those at the top. Private ordering, targeted regulation, or a new strategic bargain could strike a modern balance, preserving the benefits of the compromise between the modest and the mighty. For-Profit Philanthropy offers a detailed roadmap to show how it can be accomplished.

The purpose of this practical guide is to facilitate college students' academic success by fostering self-regulated learning skills or learning to learn through the use of Integrative Learning Technologies (ILT). It enables the college instructor, online instructor, instructional developer, or educator to envision, plan for, and implement customized instructional and curricular designs that foster learning to learn and motivate students to take ownership of their own learning. Specifically, this book demonstrates how college faculty who use Learning Management Systems (LMS) as well as emerging technologies such as Web 2.0 applications and social software can design learning tasks and course assignments that support and promote student:

- goal setting
- use of effective task strategies
- self-

monitoring and self-evaluation

- time management
- help seeking
- motivation and affect

Given the emphasis on retention of freshmen as a measure of institutional effectiveness, the focus on student success, and the increasing use of ILT in higher education, this book fulfills a dire need in the literature on the integration of technology and self-regulated learning.

This second handbook offers all new content in which readers will find a thoughtful and measured interrogation of significant contemporary thinking and practice in urban education. Each chapter reflects contemporary cutting-edge issues in urban education as defined by their local context. One important theme that runs throughout this handbook is how urban is defined, and under what conditions the marginalized are served by the schools they

---

attend. Schooling continues to hold a special place both as a means to achieve social mobility and as a mechanism for supporting the economy of nations. This second handbook focuses on factors such as social stratification, segmentation, segregation, racialization, urbanization, class formation and maintenance, and patriarchy. The central concern is to explore how equity plays out for those traditionally marginalized in urban schools in different locations around the globe. Researchers will find an analysis framework that will make the current practice and outcomes of urban education, and their alternatives, more transparent, and in turn this will lead to solutions that can help improve the life-options for students historically underserved by urban schools.

This book examines the discourses on nation-building, civic identity, minorities, and the formation of religious identities in school textbooks worldwide. It offers up-to-date, practical, and scholarly information on qualitative and mixed-method textbook analysis, as well as the broader context of critical comparative textbook and curriculum analyses in and across selected countries. The volume offers unique and empirical research on how internal educational policies and ideological goals of dominant social, political, and economic groups affect textbook production and the curricular aims in different educational systems worldwide. Chapters address the role of school textbooks in developing nationhood, the creation of citizenship through school textbooks, the complexity of gender in normative discourses, and the intersection of religion and culture in school textbooks.

Summary Humans learn best from feedback—we are encouraged to take actions that lead to positive results while deterred by decisions with negative consequences. This reinforcement process can be applied to computer programs allowing them to solve more complex problems that classical programming cannot. Deep Reinforcement Learning in Action teaches you the fundamental concepts and terminology of deep reinforcement learning, along with the practical skills and techniques you 'll need to implement it into your own projects. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the technology Deep reinforcement learning AI systems rapidly adapt to new environments, a vast improvement over standard neural networks. A DRL agent learns like people do, taking in raw data such as sensor input and refining its responses and predictions through trial and error. About the book Deep Reinforcement Learning in Action teaches you how to program AI agents that adapt and improve based on direct feedback from their environment. In this example-rich tutorial, you 'll master foundational and advanced DRL techniques by taking on interesting challenges like navigating a maze and playing video games. This book focuses on methods and tools for intelligent data analysis, aimed at narrowing the increasing gap between data gathering and data comprehension, and emphasis will also be given to solving of problems which result from automated data collection, such as analysis of computer-based patient records, data warehousing tools, intelligent alarming, effective and efficient monitoring, and so on. This book aims to describe the different approaches of Intelligent Data Analysis from a practical point of view: solving common life problems with data analysis tools.

## Second International Handbook of Urban Education Springer Nature

A deep-dive into the weird and wonderful world of Artificial Intelligence. 'The AI does not hate you, nor does it love you, but you are made of atoms which it can use for something else'. This is a book about AI and AI risk. But it's also more importantly about a community of people who are trying to think rationally about intelligence, and the places that these thoughts are taking them, and what insight they can and can't give us about the future of the human race over the next few years. It explains why these people are worried, why they might be right, and why they might be wrong. It is a book about the cutting edge of our thinking on intelligence and rationality right now by the people who stay up all night worrying about it. Along the way, we discover why we probably don't need to worry about a future AI resurrecting a perfect copy of our minds and torturing us for not inventing it sooner, but we perhaps should be concerned about paperclips destroying life as we know it; how Mickey Mouse can teach us an important lesson about how to program AI; and how a more rational approach to life could be what saves us all. --

"The global disruption to education caused by

the COVID-19 pandemic is without parallel and the effects on learning are severe. The crisis brought education systems across the world to a halt, with school closures affecting more than 1.6 billion learners. While nearly every country in the world offered remote learning opportunities for students, the quality and reach of such initiatives varied greatly and were at best partial substitutes for in-person learning. Now, 21 months later, schools remain closed for millions of children and youth, and millions more are at risk of never returning to education. Evidence of the detrimental impacts of school closures on children's learning offer a harrowing reality: learning losses are substantial, with the most marginalized children and youth often disproportionately affected. Countries have an opportunity to accelerate learning recovery and make schools more efficient, equitable, and resilient by building on investments made and lessons learned during the crisis. Now is the time to shift from crisis to recovery - and beyond recovery, to resilient and transformative education systems that truly deliver learning and well-being for all children and youth."--The World Bank website.

The field of Artificial Intelligence (AI) was initially directly aimed at the construction of ' thinking machines ' — that is, computer systems with human-like general intelligence. But this task proved more difficult than expected. As the years passed, AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains. In recent years, however, more and more AI researchers have recognized the necessity — and the feasibility — of returning to the original goal of the field. Increasingly, there is a call to focus less on highly specialized ' narrow AI ' problem solving systems, and more on confronting the difficult issues involved in creating ' human-level intelligence ', and ultimately general intelligence that goes beyond the human level in various ways. Artificial General Intelligence (AGI), as this renewed focus has come to be called, attempts to study and reproduce intelligence as a whole in a domain independent way. Encouraged by the recent success of several smaller-scale AGI-related meetings and special tracks at conferences, the initiative to organize the very first international conference on AGI was taken, with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest. In this

collection you will find the conference papers: full-length papers, short position statements and also the papers presented in the post conference workshop on the sociocultural, ethical and futurological implications of AGI.
