Implementing Inclusive Education Cambridge University Press

Curriculum and Assessment is the first volume of a new series International Perspectives on Curriculum. This edited book examines the relationship between curriculum, pedagogy and assessment, and, as with subsequent volumes, adopts a cross-sector and comparative approach. Contributors make reference to a number of important debates in the fields of curriculum and assessment: summative versus formative assessment; differentiation versus inclusion; psychometric versus holistic theorising; decontextualised versus contextualised assessment; symbol-processing versus situated learning

approaches; integrated versus connected assessment; and high stakes versus low stakes assessment. The rationale for this volume is not to reach an agreement about assessment and curriculum frameworks, but to air the various debates referred to above and develop new frameworks for understanding these important issues. This volume and the series is timely as administrators and policy-makers in different parts of the world have taken an increased interest in education, and as moves to centralise curriculum provision have gathered pace. This has in some cases driven a wedge between curriculum theory and curriculum practice, as policy-makers have developed and implemented proposals without referring to academic debates about these issues. It therefore is an important task to reassert the need to discuss and debate the curriculum in a critical manner before implementation occurs. This volume sets about that task, addressing policy-makers, administrators, teachers and the research community.

Instructional Rounds in Education is intended to help education leaders and practitioners develop a shared understanding of what high-quality instruction looks like and what schools and districts need to do to support it. Walk into any school in America and you will see adults who care deeply about their students and are doing the best they can every day to help students learn. But you will also see a high degree of variability among classrooms--much higher than in most other industrialized countries. Today we are asking schools to do something they have never done before--educate all students to high levels--yet we don't know how to do that in every classroom for every child. Inspired by the medical-rounds model used by physicians, the authors have pioneered a new form of professional learning known as instructional rounds networks. Through this process, educators

develop a shared practice of observing, discussing, and analyzing learning and teaching.

Providing clear, pedagogical steps and curriculum  
guidance, this practical book focuses on laying the strong  
foundation that is needed to assist learners in using  
English as the language of learning and teaching (LoLT)  
from grade four onward. In grade four, the majority of  
learners make the transition from their home language to  
English as the LoLT; to assist learners in this transition, it  
is important that teachers introduce English into the  
classroom from as early as Grade R (reception year, prior  
to starting grade one). The earlier learners are exposed  
to English, the more proficient they will become. Included  
in this book are strategies for introducing English into the  
classroom, techniques for teaching English alongside  
learners' home language, teaching resources for  
classroom use, and ideas for planning lessons.

Readers will come away with an in-depth understanding of what is happening with regard to the implementation of special education services and Article 24 of the Convention for the Rights of People with Disabilities. This valuable reference set serves researchers, graduate students, and policymakers in special and general education as well as professionals focused on issues of education worldwide and scholars focused on international special education. As such, this handbook will be an important reference source for university libraries, professional associations, and policy entities.
