If you think money can't buy happiness, you're not spending it right. Two rising stars in behavioral science explain how money can buy happiness—if you follow five core principles of smarter spending. If you think money can't buy happiness, you're not spending it right. Two rising stars in behavioral science explain how money can buy happiness—if you follow five core principles of smarter spending. Happy Money offers a tour of new research on the science of spending. Most people recognize that they need professional advice on how to earn, save, and invest their money. When it comes to spending that money, most people just follow their intuitions. But scientific research shows that those intuitions are often wrong. Happy Money explains why you can get more happiness for your

money by following five principles, from choosing experiences over stuff to spending money on others. And the five principles can be used not only by individuals but by companies seeking to create happier employees and provide “happier products” to their customers. Elizabeth Dunn and Michael Norton show how companies from Google to Pepsi to Crate & Barrel have put these ideas into action. Along the way, the authors describe new research that reveals that luxury cars often provide no more pleasure than economy models, that commercials can actually enhance the enjoyment of watching television, and that residents of many cities frequently miss out on inexpensive pleasures in their hometowns. By the end of this book, readers will ask themselves one simple question whenever they reach for their wallets: Am I getting the biggest happiness bang for my buck?

Will It Fly? Princeton University Press

The finance sector of Western economies is too large and attracts too many of the smartest college graduates. Financialization over the past three decades has created a structure that lacks resilience and supports absurd volumes of trading. The finance sector devotes too little attention to the search for new investment opportunities and the stewardship of existing ones, and far too much to secondary-market dealing in existing assets. Regulation has contributed more to the problems than the solutions. Why? What is finance for? John Kay, with wide practical and academic experience in

the world of finance, understands the operation of the financial sector better than most. He believes in good banks and effective asset managers, but good banks and effective asset managers are not what he sees. In a dazzling and revelatory tour of the financial world as it has emerged from the wreckage of the 2008 crisis, Kay does not flinch in his criticism: we do need some of the things that Citigroup and Goldman Sachs do, but we do not need Citigroup and Goldman to do them. And many of the things done by Citigroup and Goldman do not need to be done at all. The finance sector needs to be reminded of its primary purpose: to manage other

smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most important topics.

John Wiley & Sons

After skipping college, Steve Oliveriez worked a series of low-paying jobs before setting a remarkable goal for himself - to double his income every year. In *The Book On Making Money*, he reveals what he learned while successfully hitting this goal for seven years in a row, growing his annual income to more than \$1 million. Walking readers through the steps he took to reach his goal, he shows how they can apply the same techniques to greatly increase their own income, whether they work for

someone else or run their own business. Oliveriez spells out his disagreements with the traditional wisdom that tells young adults to go to school, get good grades and find a safe, steady job - advice that has left many Americans with tens or hundreds of thousands of dollars in student loans, credit card debt or mortgages on homes they can't afford. He also assaults the idea of saving one's way to wealth as absurd and counterproductive, using his own experience of trying to save money while poor as an example. Instead of promoting an austere lifestyle of clipping coupons and spending as little as possible, he shows how those habits can actually prevent people from becoming wealthy.

people who believe they lack the knowledge to trade. But because many people aren't ready to go from mutual funds directly into trading without understanding investing—for the long term — he created Payback Time. Too often, people see long-term investing as “mutual fund contributing” — otherwise known as “long-term hoping.” But the sad truth is that mutual fund investors are, to a stunning degree, pinning their hopes on an institution that is hopeless. It turns out that only 4% of fund managers consistently beat the S&P 500 index over the long term, which means that 96% of fund investors see a smaller return on their nest egg than a chimpanzee who simply

buys stocks in the 500 biggest companies in America and watches what happens. But it's worse than that. The net effect of hitching your wagon to mutual funds is that over a lifetime they'll fritter away as much 60% of your nest egg in fees. Once you understand how funds engineer this, you'll rush to invest on your own. Payback Time's risk-free approach is called “stockpiling” and it's how billionaires get rich in bad markets. It's a set of rules for investing (not trading but investing) in the right businesses at the right time -- rules that will ensure you make the big money.

Sir John Templeton, legendary investor, was famous for saying, "The four most dangerous words in investing are, 'This time it's different.'" He knew that though history doesn't repeat, not exactly, history is an excellent guide for investors. In *Markets Never Forget But People Do: How Your Memory Is Costing You*

*Money and Why This Time Isn't Different*, long-time Forbes columnist, CEO of Fisher Investments, and 4-time New York Times bestselling author Ken Fisher shows how and why investors' memories fail them—and how costly that can be. More important, he shows steps investors can take to begin reducing errors they repeatedly make. The past is never indicative of the future, but history can be one powerful guide in shaping forward looking expectations. Readers can learn how to see the world more clearly—and learn to make fewer errors—by understanding just a bit of investing past.
