As sites of documentary preservation rooted in various national and social contexts, artifacts of culture, and places of uncovering, archives provide tangible evidence of memory for individuals, communities, and states, as well as defining memory institutionally within prevailing political systems and cultural norms. By assigning the prerogatives of record keeper to the archivist, whose acquisition policies, finding aids, and various institutionalized predilections mediate between scholarship and information, archives produce knowledge, legitimize political systems, and construct identities. Far from being mere repositories of data, archives actually embody the fragments of culture that endure as signifiers of who we are, and why. The essays in Archives, Documentation, and Institutions of Social Memory conceive of archives not simply as historical repositories but as a complex of structures, processes, and epistemologies situated at a critical point of the intersection between scholarship, cultural practices, politics, and technologies.

Still the only concise practical guide to laboratory experiments in proteomics, this new edition now also covers DIGE technology and liquid-chromatography, while the troubleshooting section has been considerably extended. Adopting a practical approach, the authors present the relevant techniques and explain the route to successful experimental design and optimal method selection. They cover such electrophoretic techniques as isoelectric focusing, SDS page, 2-D page, and DIGE, as well as liquid-chromatography

techniques, such as ion exchange, affinity chromatography and reversed-phase HPLC. Mass-spectrometric techniques include MALDI, ESI, and FT ICR. Generously illustrated, partly in color, the book also features updates of protocols as well as animations illustrating crucial methodological steps on a companion website.

Headache: Through the Centuries illuminates the history of headaches with a particular interest in how the disorder has been understood and treated since the earliest recorded accounts, dating from around 4000 BC. Different types of headache were being recognized as early as the 2nd century AD. Over the years, though, the classification of types of headache has changed so that headache patterns described in the past are often difficult to relate to present-day types of headache. Since that time, a great deal of material on the topic has become available, the full gamut of manifestations of the disorder has been described, and considerable insight into its mechanisms has been obtained, though no completely satisfactory explanation of the disorder has yet become available. Providing an extensive history and the development of our understanding of headache over the course of six millennia, Headache: Through the Centuries is thought-provoking and relevant

reading for neurologists, medical historians, and anyone interested in headaches.

The third edition succeeds the fifth update of second edition. One of the main features has been the adoption of new and revised international standards, notably the International Standard Identifier for Libraries and Related Organizations, the ISBN 13 and the linking ISSN. New fields have been added for recording the Persistent Record Identifier. Uniform Conventional Headings for Legal and Religious texts are now catered for with separate fields. A number of fields have been revised: archival materials, manuscripts and documentation produced by the ISSN International Centre.
