"A highly personal, richly informed and culturally wide-ranging meditation on the loss of meaning in our times and on pathways to rediscovering it." —Gabor Maté, MD, author of In The Realm of Hungry Ghosts: Close Encounters With Addiction A neuroanthropologist maps out a revolutionary new practice—Hedonic Engineering—that combines the best of neuroscience and optimal psychology. It's an intensive program of breathing, movement, and sexuality that mends trauma, heightens inspiration and tightens connections—helping us wake up, grow up, and show up for a world that needs us all. This is a book about a big idea. And the idea is this: Slowly over the past few decades, and now suddenly, all at once, we're suffering from a collapse in Meaning.

Fundamentalism and nihilism are filling that vacuum, with consequences that affect us all. In a world that needs us at our best, diseases of despair, tribalism, and disaster fatigue are leaving us at our worst. It's vital that we regain control of the stories we're telling because they are shaping the future we're creating. To do that, we have to remember our deepest inspiration, heal our pain and apathy, and connect to each other like never before. If we can do that, we've

got a shot at solving the big problems we face. And if we can't? Well, the dustbin of history has swallowed civilizations older and fancier than ours. This book is divided into three parts. The first, Choose Your Own Apocalypse, takes a look at our current Meaning Crisis--where we are today, why it's so hard to make sense of the world, what might be coming next, and what to do about it. It also makes a case that many of our efforts to cope, whether anxiety and denial, or tribalism and identity politics, are likely making things worse. The middle section, The Alchemist Cookbook, applies the creative firm IDEO's design thinking to the Meaning Crisis. This is where the book gets hands on--taking a look at the strongest evolutionary drivers that can bring about inspiration, healing, and connection. From breathing, to movement, sexuality, music, and substances--these are the everyday tools to help us wake up, grow up, and show up. AKA--how to blow yourself sky high with household materials. And the best part? They're accessible, by anyone anywhere, no middleman required. Transcendence democratized. The final third of the book, Ethical Cult Building, focuses on the tricky nature of putting these kinds of experiences into gear and into culture--because, anytime in the past when we've figured out combinations of peak states and deep healing, we've almost always ended up with problematic culty communities. Playing with fire has left a lot of people burned. This section lays out a roadmap for sparking a thousand fires around the world--each one unique and tailored to the needs and values of its participants. Think of it as an open-source toolkit for building ethical culture. In Recapture the Rapture, we're taking radical research out of the extremes and applying it to the mainstream--to the broader social problem of healing, believing, and belonging. It's providing answers to the questions we face: how to replace blind faith with direct

experience, how to move from broken to whole, and how to cure isolation with connection. Said even more plainly, it shows us how to revitalize our bodies, boost our creativity, rekindle our relationships, and answer once and for all the questions of why we are here and what do we do now? In a world that needs the best of us from the rest of us, this is a book that shows us how to get it done.

 Industrial revolutions have impacted both, manufacturing and service. From the steam engine to digital automated production, the industrial revolutions have conducted significant changes in operations and supply chain management (SCM) processes. Swift changes in manufacturing and service systems have led to phenomenal improvements in productivity. The fast-paced environment brings new challenges and opportunities for the companies that are associated with the adaptation to the new concepts such as Internet of Things (IoT) and Cyber Physical Systems, artificial intelligence (AI), robotics, cyber security, data analytics, block chain and cloud technology. These emerging technologies facilitated and expedited the birth of Logistics 4.0. Industrial Revolution 4.0 initiatives in SCM has attracted stakeholders' attentions due to its ability to empower using a set of technologies together that helps to execute more efficient production and distribution systems. This initiative has been called Logistics 4.0 of the fourth Industrial Revolution in SCM due to its high potential. Connecting entities, machines, physical items and enterprise resources to each other by using sensors, devices and the internet along the supply chains are the main attributes of Logistics 4.0. IoT enables customers to make more suitable and valuable decisions due to the data-driven structure of the Industry 4.0 paradigm. Besides that, the system's ability of gathering and analyzing information about the environment at any given time and adapting itself to the rapid changes add significant value to the SCM processes. In this peer-reviewed book, experts from all over the world, in the field present a conceptual framework for Logistics 4.0 and provide examples

for usage of Industry 4.0 tools in SCM. This book is a work that will be beneficial for both practitioners and students and academicians, as it covers the theoretical framework, on the one hand, and includes examples of practice and real world.  In the 1950's, the design and implementation of the Toyota Production System (TPS) within Toyota had begun. In the 1960's, Group Technology (GT) and Cellular Manufacturing (CM) were used by Serck Audco Valves, a high-mix low-volume (HMLV) manufacturer in the United Kingdom, to guide enterprise-wide transformation. In 1996, the publication of the book Lean Thinking introduced the entire world to Lean. Job Shop Lean integrates Lean with GT and CM by using the five Principles of Lean to guide its implementation: (1) identify value, (2) map the value stream, (3) create flow, (4) establish pull, and (5) seek perfection. Unfortunately, the tools typically used to implement the Principles of Lean are incapable of solving the three Industrial Engineering problems that HMLV manufacturers face when implementing Lean: (1) finding the product families in a product mix with hundreds of different products, (2) designing a flexible factory layout that "fits" hundreds of different product routings, and (3) scheduling a multi-product multi-machine production system subject to finite capacity constraints. Based on the Author's 20+ years of learning, teaching, researching, and implementing Job Shop Lean since 1999, this book Describes the concepts, tools, software, implementation methodology, and barriers

to successful implementation of Lean in HMLV production systems Utilizes Production Flow Analysis instead of Value Stream Mapping to eliminate waste in different levels of any HMLV manufacturing enterprise Solves the three Industrial Engineering problems that were mentioned earlier using software like PFAST (Production Flow Analysis and Simplification Toolkit), Sgetti and Schedlyzer Explains how the one-at-a-time implementation of manufacturing cells constitutes a long-term strategy for Continuous Improvement Explains how product families and manufacturing cells are the basis for implementing flexible automation, machine monitoring, virtual cells, Manufacturing Execution Systems, and other elements of Industry 4.0 Teaches a new method, Value Network Mapping, to visualize large multi-product multi-machine production systems whose Value Streams share many processes Includes real success stories of Job Shop Lean implementation in a variety of production systems such as a forge shop, a machine shop, a fabrication facility and a shipping department Encourages any HMLV manufacturer planning to implement Job Shop Lean to leverage the co-curricular and extracurricular programs of an Industrial Engineering department
