A provocative view of economic growth in the Third World argues that the countries that have achieved steady economic growth—including future economic superpowers India and China—have done so because they have resisted the American ideology of free markets. The American government has been both miracle worker and villain in the developing world. From the end of World War II until the 1980s poor countries, including many in Africa and the Middle East, enjoyed a modicum of economic growth. New industries mushroomed and skilled jobs multiplied, thanks in part to flexible American policies that showed an awareness of the diversity of Third World countries and an appreciation for their long-standing knowledge about how their own economies worked. Then during the Reagan era, American policy changed. The definition of laissez-faire shifted from "Do it your way," to an imperial "Do it our way." Growth in the developing world slowed, income inequalities skyrocketed, and financial crises raged. Only East Asian economies resisted the strict prescriptions of Washington and continued to boom. Why? In *Escape from Empire*, Alice Amsden argues provocatively that the more freedom a developing country has to determine its own policies, the faster its economy will grow. America's recent inflexibility—as it has single-mindedly imposed the same rules, laws, and institutions on all developing economies under its influence—has been the backdrop to the rise of two new giants, China and India, who have built economic power in their own way. Amsden describes the two eras in America's relationship with the developing world as "Heaven" and "Hell"—a beneficent and politically savvy empire followed by a dictatorial, ideology-driven one. What will the next American empire learn from the failure of the last? Amsden argues convincingly that the world—and the United States—will be infinitely better off if new centers of power are met with sensible policies rather than hard-knuckled ideologies. But, she asks, can it be done?

The inside story of the laptop that exposed the president's dirtiest secret. When a drug-addled Hunter Biden abandoned his waterlogged computer at a Mac repair shop in Delaware in the spring of 2019, just six days before his father announced his candidacy for the United States presidency, it became the ticking time bomb in the shadows of Joe Biden's campaign. The dirty secrets contained in Hunter's laptop almost derailed his father's presidential campaign and ignited one of the greatest media coverups in American history. This is the unvarnished story of what's really inside the laptop and what China knows about the Bidens, by the New York Post journalist who brought it into the open. It exposes the coordinated censorship operation by Big Tech, the media establishment, and former intelligence operatives to stifle the New York Post's coverage, in a chilling exercise of raw political power three weeks before the 2020 election. A treasure trove of corporate documents, emails, text messages, photographs, and voice recordings, spanning a decade, the laptop provided the first evidence that President Joe Biden was involved in his son's ventures in China, Ukraine, and beyond, despite his repeated denials. This intimate insight into Hunter's dissolute lifestyle shows he was incapable of holding down a job, let alone being paid tens of millions of dollars in high-powered international business deals by foreign interests, unless he had something else of value to sell—which of course he did. He was the son of the vice president who would go on to become the leader of the free world.
