Since the beginning of the
century, electrical goods have
invaded our everyday lives.

Now, electric power is coming
to be seen as a solution to the
pollution caused by cars. While
this transition has remained
very slow during the last ten
years, it has been accelerating
as the statutory constraints and
needs of the market have
changed. Even if the electric
car itself fails to dominate the
market, electric traction is
taking an important place in
our drive to move away from
gas-powered vehicles. Another
solution, hybrid vehicles,
combine two sources of energy
(electric and chemical),
reducing the global
consumption of fossil fuels.
Fuel cell vehicles are also one
of the most promising
technologies for the future, with
the capacity to use any fuel -
hydrogen being the ideal fuel
ecologically, but constrained by
infrastructure and storage
issues. This book explores all
these different solutions for
moving our vehicles from fossil
fuel consumption to new, more
environmentally-friendly power
sources.
