Financial Reporting & Analysis South-Western Pub

The publication of this volume completes the new edition of the sources and major analogues of all the Canterbury Tales prepared by members of the New Chaucer Society. This collection, the first to appear in over half a century, features such additions as a fresh interpretation of Chaucer's sources for the frame of the work, chapters on the sources of the General Prologue and Retractions, and modern English translations of all foreign language texts, with glosses for the Middle English. Chapters on the individual tales contain an updated survey of the present state of scholarship on their source materials. Several sources and analogues discovered during the past fifty years are found here together for the first time, and some other familiar sources are re-edited from manuscripts closer to Chaucer's copies.

Besides the General Prologue and the Retractions, this volume includes chapters on the Miller, Summoner, Merchant, Physician, Shipman, Prioress, Sir Thopas, Canon's Yeoman, Manciple, the Knight and the prologues and tales of the Man of Law and Wife of Bath. Contributors: PETER BEIDLER, KENNETH A. BLEETH, LAUREL BROUGHTON, JOANNE CHARBONNEAU, WILLIAM E. COLEMAN, CAROLYN P. Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools,

and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an

innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

This manual is an indispensable tool for introducing advanced undergraduates and beginning graduate students to the techniques of recombinant DNA technology, or gene cloning and expression. The techniques used in basic research and biotechnology laboratories are covered in detail. Students gain hands-

on experience from start to finish in subcloning a gene into an expression vector, through purification of the recombinant protein. The third edition has been completely re-written, with new laboratory exercises and all new illustrations and text, designed for a typical 15-week semester, rather than a 4-week intensive course. The "project approach to experiments was maintained: students still follow a cloning project through to completion, culminating in the purification of recombinant

protein. It takes advantage of necessary recipes and catalog the enhanced green fluorescent numbers, providing staff with protein - students can actually visualize positive clones following IPTG induction. Cover basic concepts and techniques used in molecular biology research labs Student-tested labs proven successful in a real classroom laboratories Exercises simulate a cloning project that would be performed in a real research lab "Project" approach to experiments gives students an overview of the entire process Prep-list appendix contains detailed instructions
