NATIONAL BESTSELLER • "Rutherford brings England's New Forest to life" (The Seattle Times) in this companion to the critically acclaimed Sarum From the time of the Norman Conquest to the present day, the New Forest, along England's southern coast, has remained an almost mythical place. It is here that Saxon and Norman kings rode forth with their hunting parties, and where William the Conqueror's son Rufus was mysteriously killed. The mighty oaks of the forest were used to build the ships for Admiral Nelson's navy, and the fishermen who lived in Christchurch and Lymington helped Sir Francis Drake fight off the Spanish Armada. The New Forest is the perfect backdrop for the families who people this epic story. The feuds, wars, loyalties, and passions of many hundreds of years reach their climax in a crime that shatters the decorous society of Bath in the days of Jane Austen, whose family lived on the edge of the Forest. Edward Rutherfurd is a master storyteller whose sense of place and character—both fictional and historical—is at its most vibrant in The Forest. "As entertaining as Sarum and Rutherford's other sweeping novel of British history, London." —The Boston Globe

A detailed, practical review of state-of-the-art implementations of memory in IoT hardware As the Internet of Things (IoT) technology continues to evolve and become increasingly common across an array of specialized and consumer product applications, the demand on engineers to design new generations of flexible, low-cost, low power embedded memories into IoT hardware becomes ever greater. This book helps them meet that demand. Coauthored by a leading international expert and multiple patent holder, this book gets engineers up to speed on state-of-the-art implementations of memory in IoT hardware. Memories for the Intelligent Internet of Things covers an array of common and cutting-edge IoT embedded memory implementations. Ultra-low-power memories for IoT devices-including plastic and polymer circuitry for specialized applications, such as medical electronics-are described. The authors explore microcontrollers with embedded memory used for smart control of a multitude of Internet devices. They also consider neuromorphic memories made in Ferroelectric RAM (FeRAM), Resistance RAM (ReRAM), and Magnetic RAM

(MRAM) technologies to implement artificial intelligence (AI) for the collection, processing, and presentation of large quantities of data generated by IoT hardware. Throughout the focus is on memory technologies which are complementary metal oxide semiconductor (CMOS) compatible, including embedded floating gate and charge trapping EEPROM/Flash along with FeRAMS, FeFETs, MRAMs and ReRAMs. Provides a timely, highly practical look at state-of-the-art IoT memory implementations for an array of product applications Synthesizes basic science with original analysis of memory technologies for Internet of Things (IoT) based on the authors' extensive experience in the field Focuses on practical and timely applications throughout Features numerous illustrations, tables, application requirements, and photographs Considers memory related security issues in IoT devices Memories for the Intelligent Internet of Things is a valuable working resource for electrical engineers and engineering managers working in the electronics system and semiconductor industries. "[A] violent, surrealist romp" from the Tony Award–winning playwright of Hurlyburly and Visiting Edna (The Brown Daily Herald). David Rabe explores the struggle between hope and anguish in the human spirit in this story of two small-time jewel thieves united in a strangely unsettling friendship and the constant fight to prove to themselves and others how tough they are. But when their frantic scheming suddenly begins to betray them in mysterious ways, they find themselves trapped into a kidnapping and a murder over which they seem to have no control. Or do they? David Rabe's language creates and recreates reality in constantly surprising ways, magically dramatizing the danger of the power of illusion—and the illusion of power—with force and insight. "A potluck smorgasbord of surrealism, dream soliloquies, science fiction, noir potboiler and fairy tales, with the ghosts of such other writers as David Mamet, Harold Pinter, Sam Shepard and even novelist Thomas Pynchon hovering nearby . . . boasts ample proof of a top-notch writer at work." —Chicago Tribune "A fast-paced, visceral work with a manic, anarchic energy . . . a chaotic examination of power and powerlessness in a frightening, irrational universe." —The Brown Daily Herald "[A] surrealist, hilarious, mind-fuck of a play . . . a wild, high-energy ride through plot and action." —LAist Praise for David Rabe "Few contemporary dramatists have dealt with violence, physical and psychological, more impressively than Rabe." —Kirkus Reviews "A remarkable storyteller." —Chicago Tribune "Rabe's mastery of dialogue is the equal of Pinter and Mamet put together." —The Boston Globe.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".
