Manual of Digital Earth Pearson Education Historically Canadians have considered themselves to be more or less free of racial prejudice. Although this conception has been challenged in recent years, it has not been completely dispelled. In Colour-Coded, Constance Backhouse illustrates the tenacious hold that white supremacy had on our legal system in the first

half of this century, and underscores the damaging legacy of inequality that continues today. Backhouse presents detailed narratives of six court cases, each giving evidence of blatant racism created and enforced through law. The cases focus on Aboriginal, Inuit, Chinese-Canadian, and African-Canadian individuals, taking us from the criminal prosecution of traditional Aboriginal dance to the trial of members of the 'Ku Klux Klan of Kanada.' From thousands of possibilities, Backhouse has selected studies that constitute central moments in the legal history of race in Canada. Her selection also considers a wide range of legal forums, including administrative rulings by municipal councils, criminal trials before police magistrates, and criminal and civil cases heard by the highest courts in the provinces and by the Supreme Court of Canada. The extensive and detailed documentation presented here leaves no doubt that the Canadian legal system played a dominant role in creating and preserving racial discrimination. A central message of this book is that racism is deeply embedded in Canadian history despite Canada's reputation as a raceless society. This is the classic history of the African peoples in Africa and the New World, a repudiation of the absurd belief, widely held in the post-Civil War period, that Africans had no civilization but the one foisted upon them by their slave-trading captors.Writing for a popular audience in 1915, DuBois, one of America's greatest writers, lays out in easy-to-read, nonacademic prose the striking and illustrious story of the complex history and varied cultures of Africa. He explores everything from the art and industry of the peoples of the continent to the dramatic impact the slave trade had both in Africa and on her descendants in the Western Hemisphere.Boldly proud and beautifully written, this essential work will delight readers of American and African history as well as students of great American literature.American writer, civil rights activist, and scholar WILLIAM EDWARD BURGHARDT DU BOIS (1868-1963) was the first black man to receive a PhD from Harvard University. A co-founder of the NAACP, he wrote a number of important books, including Black

Folk, Then and Now (1899) and The Negro (1915).

A manual of Budhism, in its modern development
O'Reilly Media "Based on pre-war research and captured German wartime technology, a number of French jet, ramjet and rocket-powered aircraft reached at least prototype form. Vertical take-off, variable geometry wings and even flying boat concepts were among some of the most radical aircraft designs, studies and projects ever produced anywhere in the world. Driven by the need to equip its air forces, compete in export markets and catch-up with its international competitors, French companies gave free reign to their designers to come up with radical and

Pioneering software assurance experts Dr. Nancy R. Mead and Dr. Carol C. Woody bring together comprehensive best practices for building software systems that exhibit superior operational security, and for considering security throughout your full system development and acquisition lifecycles. Drawing on their pioneering work at the Software Engineering Institute (SEI) and Carnegie Mellon University, Mead and Woody introduce seven core principles of software assurance, and show how to apply them coherently and systematically. Using these principles, they help you prioritize the wide range of possible security actions available to you, and justify the required investments. Cyber Security

Engineering guides you through risk analysis, planning to manage secure software development, building organizational models, identifying required and missing competencies, and defining and structuring metrics. Mead and Woody address important topics, including the use of standards, engineering security requirements for acquiring COTS software, applying DevOps, analyzing malware to anticipate future vulnerabilities, and planning ongoing improvements. This book will be valuable to wide audiences of practitioners and managers with responsibility for systems, software, or quality engineering, reliability, security, acquisition, or operations. Whatever your role, it can help you reduce operational problems, eliminate excessive patching, and deliver software that is more resilient and secure.

Springer Nature This book is about the rise of digital labor. Companies like Uber and Amazon Mechanical Turk promise autonomy, choice, and flexibility. One of network culture's toughest critics, Trebor Scholz chronicles the work of workers in the "sharing economy," and the free labor on sites like Facebook, to take these myths apart. In this rich, accessible, and provocative book, Scholz exposes the uncaring reality of contingent digital work, which is thriving at the expense of employment and worker rights. The book is meant to inspire readers to join the growing number of worker-owned "platform cooperatives," rethink unions, and build a better future of work. A call to action, loud and clear, Uberworked and Underpaid shows that it is time to stop wage theft and "crowd fleecing," rethink wealth distribution, and address the urgent question of how digital labor should be

regulated and how workers from Berlin, Barcelona, Seattle, and São Paulo can act in solidarity to defend their rights. *Punch* John Wiley & Sons
The book focuses on Indonesia's most pressing labor market challenges and associated policy options to achieve higher and more inclusive economic growth. The challenges consist of creating jobs for and the skills in a youthful and increasingly better educated workforce, and raising the productivity of less-educated workers to meet the demands of the digital age. The book deals with a range of interrelated topics---the changing supply and demand for labor in relation to the shift of workers out of agriculture; urbanization and the growth of megacities; raising the quality of schooling for new jobs in the digital economy; and labor market policies to improve both labor standards and productivity.
