'One of the best books yet written on data and algorithms. . .deserves a place on the bestseller charts.' (The Times) You are accused of a crime. Who would you rather determined your fate - a human or an algorithm? An algorithm is more consistent and less prone to error of judgement. Yet a human can look

you in the eye before passing sentence.

Welcome to the age of the algorithm, the story of a not-too-distant future where machines rule supreme, making important decisions - in healthcare, transport, finance, security, what we watch, where we go even who we send to prison. So how much should we rely on them? What kind of future do we want? Hannah Fry takes us on a tour of the good, the bad and the downright ugly of the algorithms that surround us. In Hello World she lifts the lid on their inner workings, demonstrates their power, exposes their limitations, and examines whether they really are an improvement on the humans they are replacing. Scrum is an agile framework for completing complex projects. This book gives examples, tools, and tricks to do Scrum well. For each trick it is explained why it helps. The practices themselves may be worth trying, but by understanding why it works the readers will be able to come up with their own ideas that work better in their organization and situation. All the

practical examples in this book have helped someone, somewhere to become a part of a better Scrum team. Scrum's motto is: Inspect and Adapt; change small things one at a time and see what works. Scrum is not done by project leaders or managers, but really by the teams--to succeed in an organization, the teams must do Scrum well. If the teams do Scrum well, the whole organization will benefit from it. Scrum helps a team self-organize, which fits in well with developers, who usually don't like to be micromanaged. At the same time, Scrum can scale: Self-organized teams work together well, and one manager doesn't have to manage all the people. The lessons from this book help Scrum teams develop into autonomous, proud, and independent teams. Often teams fail to become powerful enough to change the organization, so they cannot perform to their full potential. A good team can lead the stakeholders into trusting them. They will then make plans based on the team's release planning instead of making roadmaps out of thin air, and thus make the organization much more predictable.

Beloved German cyclist Jens Voigt isn't a superstar in the traditional sense of the word. Although he won three stages of the Tour De France—and wore the yellow jersey twice—Voigt never claimed an overall victory. He became a star because he embodies qualities that go beyond winning and losing: sacrifice, selflessness, reliability, and devotion. European and American crowds were drawn to his aggressive riding style, outgoing nature, and refreshing realness. Voigt adopted a tireless work ethic that he carried throughout his career. In Shut Up, Legs! (a legendary Jensism), Voigt reflects upon his childhood in East Germany, juggling life as a professional cyclist and a

father of six, and how he remained competitive without doping. Shut Up, Legs! offers a rare glimpse inside his heart and mind.

Inhaltsangabe:Abstract: The market of mobile technologies is growing at an enormous rate worldwide. With the latest developments in technology, new services are being invented which were not even possible some years ago. As new devices, applications and services emerge, also the number of mobile users is increasing in a rapid manner. Mobile broadband networks like UMTS, EDGE or Wireless LAN make it possible to reach a large group of users who gain access with their personal mobile devices, equipped with multimedia and data capabilities. Due to this development, new interesting possibilities arise for many areas. One of these areas is the tourism sector, which is being referred to in this thesis. The so-called m-tourism (mobile tourism) is an emerging field with an enormous marketing potential, as described in Chapter 2. Recent hardware inventions and developments are greatly pushing the market share. Companies are offering tailored products filling the needs of their customers. Personalization of services becomes a popular trend in this sector. But what do users think about such a mobile tourism service? Do they feel the service has added benefits, compared to traditional media and Web-based services? Are those products really user friendly? What would be the crucial applications and qualities that make the big difference? A range of usability issues concerning mobile services is being discussed in the science community; are there already viable, good solutions? With the recent hype of so-called location based services, the consumer keeps calling for more usable products, featuring more intuitive interfaces. Others may fear being overwhelmed with features. Especially for the senior users, a relatively big target group for most mobile applications, these products often remain a mystery. Usability has been and should always remain a key element for quality software and successful applications. In this thesis, several applications are described, some of their user interfaces are analyzed and major flaws discovered. Furthermore, a corresponding prototype user interface is introduced with a specific analysis of each development step, taken from the book The Usability Engineering Lifecycle by Deborah J. Mayhew. Once prototypical realisations are available, users can validate the implemented approaches and evaluate concepts and realization details from their point of view. Such first user experiences are a valuable guidance for further [...]
