**Personality: Classic Theories And Modern Research, 3/E** Penguin

The chapters presented here provide the reader with an awareness of the divergent views of what constitutes racism and frameworks for reducing it. This book points out that the dialogue and research on this subject since the mid-1970s have yielded increased contro versy over the theories, foundation, and continued existence of racism. Ironically, what we viewed in the 1954Brown decision and the Civil Rights Act of 1964as the beginning of the end of racism turned out to be the beginning of confusion over the course of action to ensure societal acceptance of political mandates. Hence, the title of this book captures the essence of the emotional core of any forum for examining racism, past and present. One of the most controversial forums has been that ofeducation, beginning with the D.S. Supreme Court's 1954ruling in Brown v. Board oi Education. Behind every event that has spawned controversy is a profile in courage. It was not a simple decision for the players in the scenario of the Brown v. Board oi Education case to step forward and present themselves as evidence of discrimination. Blackparents supported by black organizations viewed this legal action as a chance for equal opportunity. Yet, the 1950s were a time when black communities were pained by the thought that bigotry and institutional racism would forever stand in the way of their achieving equality.

This report describes a paradigm shift in road safety policy, being led by a handful of countries, according to the principles of a Safe System. A Safe System is based on the premise that road crashes are both predictable and preventable, and that it is possible to move towards zero road deaths and serious injuries. This, however, requires a fundamental rethink of the governance and implementation of road safety policy. To stem the road death epidemic, the United Nations have set the target of halving traffic fatalities by 2020. Every year, 1.25 million people are killed in road crashes and up to 50 million are seriously injured. Road crashes kill more people than malaria or tuberculosis and are among the ten leading causes of death. Their economic cost is estimated at 2-5% of GDP in many countries. Written by a group of international road safety experts, this report provides leaders in government, administrations, business and academia with emerging best practices and the starting point to chart their own journeys towards a Safe System.

With more than 70 percent of its population living in cities, Latin America and the Caribbean (LAC) is among the most urbanized regions in the world. Yet, although its cities are, on average, more productive than those elsewhere in the world, their productivity lags that of North American and Western European cities. Closing this gap provides LAC with the opportunity to raise living standards and join the ranks of the world's richest countries. *Raising the Bar: Cities and Productivity in Latin America and the Caribbean* is about the productivity of cities in LAC and the factors that help to explain its determination. Based on original empirical research, the report documents the high levels of population density and other features of LAC cities that mark them out from those in the rest of the world. The report also studies the role of three key factors – urban form, skills, and access to markets – in determining the productivity of LAC cities. It shows that while excessive congestion forces and inadequate metropolitan coordination seem to be stifling the benefits of agglomeration, LAC cities benefit from strong human capital externalities. It also finds that, within individual LAC countries, cities are poorly integrated with one another, which contributes to large differences in performance across cities and undermines their aggregate contribution to productivity at the national level.
