This book presents many valuable research methods useful in conducting research in modern urban transportation systems and networks. The knowledge base in practical examples, as well as the decision support methods described in this book, is of interest to people who face the challenge of searching for solutions to the problems of contemporary transport networks and systems on a daily basis. The book is therefore addressed to local authorities related to the planning and development of strategies for selected areas with regard to transport (both in the urban and regional dimensions) and to representatives of business and industry, as people directly involved in the implementation of urban transportation systems and networks solutions. The methods contained in individual chapters of the book allow to look at a given problem in an advanced way and facilitate the selection of the appropriate strategy (e.g., in relation to the air quality in considering the impact of the atmospheric emission from the urban road traffic, the role of incentive programs in promoting the purchase of electric cars, life-cycle costing decision-making methodology and urban intersection design, but also in assessing the impact of the socio-financial conditions on the bike-sharing system operation and its implementation in medium-sized cities, etc.). In turn, due to the new approach to theoretical models (including comparison methods of driving errors in a single-lane and multi-lane roundabouts, methods of parking measurements, methods of ensuring the technical readiness of transport companies fleet due to the region's capabilities as well as speed-related surrogate measures of road safety based on floating car data), the book is also of interest to scientists and researchers carrying out research in this area.

Note to the 1st Edition This manual has been translated from Italian by a non-native translator. This will allow full comprehensibility of the text but will not always guarantee an absolute smoothness of the natural expressive form. As this is a technical manual, we do not think that this is particularly serious. However, we apologize to the reader, appealing to his understanding. If the English version of this manual will receive sufficient consent, we will ensure that we prepare a new edition with a more refined translation as soon as possible. Those who would like to help me improve the translation of the English version of this manual and other manuals like this, can contact me at the addresses they can find below. I invite you to report any suggestions, incompleteness, errors, by writing an email to the address below. The manual is available on www.alessandrofois.com under the Books menu Preface The purpose of this manual is to provide concrete and simple help aimed at rapidly obtaining professional-level results, in alignment with the quality standards of the audio production industry, without using analog outboards. The easy application of the criteria suggested below make it suitable for inexperienced operators; but even audio professionals with few mastering experiences will be able to integrate and reorganize the knowledge already acquired through practice. Digital technology has made the equipment necessary to obtain professional results more accessible; therefore numerous home studios were born, dedicated to recording and processing of sound, some of which are managed by sound engineers of good competence, almost like their professional colleagues. Primarily this book is addressed to them, so that they can organize in a more orderly way the knowledge already acquired, fill

the conceptual gaps, learn new concepts and procedures, find out inspiration for new mental and professional paths. An experienced sound engineer will smile for some simplified explanations. They aim to make the material accessible. But perhaps he will read these pages equally with pleasure, considering them a mental exercise of “revision”. For beginners, the manual would like to provide support to learn correctly and experiment with the principles and procedures of digital audio mixing.
