Riffing on the techie term 'wayfinding', which designers and manufacturers use when talking about the function of signs and signage systems as they are used by the viewer, this book seeks to find a more precise visual language for what sign designers actually do, which is to show the way. Unfortunately, as Mollerup points out, many designers never master the art of wayshowing themselves. For wayshowing relates to wayfinding as writing relates to reading and as talking relates to hearing - The purpose of wayshowing is to facilitate wayfinding. In this accessible but invigorating investigation, Mollerup examines international sign systems and architectural landmarks in detail with his trademark candor and good humor. His analysis is at once pithy, scholarly, and historical.

Cyber Security Engineering is the definitive modern reference and tutorial on the full range of capabilities associated with modern cyber security engineering. Pioneering software assurance experts Dr. Nancy R. Mead and Dr. Carol C. Woody bring together comprehensive best practices for building software systems that exhibit superior operational security, and for considering security throughout your full system development and acquisition lifecycles. Drawing on their pioneering work at the Software Engineering Institute (SEI) and Carnegie Mellon University, Mead and Woody introduce seven core principles of software assurance, and show how to apply them coherently and systematically. Using these principles, they help you prioritize the wide range of possible security actions available to you, and justify the required investments. Cyber Security Engineering guides you through risk analysis, planning to manage secure software development, building organizational models, identifying required and missing competencies, and defining and structuring metrics. Mead and Woody address important topics, including the use of standards, engineering security requirements for acquiring COTS software, applying DevOps, analyzing malware to anticipate future vulnerabilities, and planning ongoing improvements. This book will be valuable to wide audiences of practitioners and managers with responsibility for systems, software, or quality engineering, reliability, security, acquisition, or operations. Whatever your role, it can help you reduce operational problems, eliminate excessive patching, and deliver software that is more resilient and secure.

This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".

Many of the cars blocking the ambulance entrance had their lifeless occupants slumped over the steering wheels or their heads propped against the car windows. The sliding doors were propped open by more bodies of virus casualties. Robert looked deeper into the dark hospital and turned around. The hospital was not receiving more patients. Jillian stared over the city of Hong Kong from the eighteenth floor of the luxury hotel. Although it was the middle of the day, the entire city was dead. Not a car, boat or person was moving. The hotel had no water, phone or electricity. Despair washed over her as she thought of her children. She prayed that her two boys survived the virus. The problem was that they were a very large ocean away. Adapting to the new world was difficult. Finding and protecting your family was an even greater challenge.
