Appropriate for use in developmental research methods or analysis of change courses, this is the first methods handbook specifically designed to meet the needs of those studying development. Leading developmental methodologists present cutting-edge analytic tools and describe how and when to use them, in accessible, nontechnical language. They also provide valuable guidance for strengthening developmental research with designs that anticipate potential sources of bias. Throughout the chapters, research examples demonstrate the procedures in action and give readers a better understanding of how to match research questions to developmental methods. The companion website ([www.guilford.com/laursen-materials](http://www.guilford.com/laursen-materials)) supplies data and program syntax files for many of the chapter examples.

Life-Span Development Psychology: Research and Theory covers the issues and problems associated with a life-span conceptualization of developmental psychology. The book discusses the status, issues, and antecedents of life-span developmental psychology; an approach to theory construction in the psychology of development and aging; and models and theories of development. The text also describes the methodology and research strategy in the study of developmental change; the application of multivariate strategies to problems of measuring and structuring long-term change; and the mechanisms required for the operation of perception and recognition. Learning and retention; language; and intellectual abilities are also considered. Developmental psychologists will find the study invaluable.

Life-Span Developmental Psychology: Dialectical Perspectives on Experimental Research is a compilation of papers that deals with the dialectical perspective focusing on the developmental process of the individual's interaction with the environment. Part 1 discusses the theoretical issues of psychological theorists such as Piaget and Kaplan. The text includes topics such as the dialectics of time and post-Newtonian metatheory for psychologists. One paper discusses the dialectic method and theory in the work of psychology as social proof structures, particularly when systems of action cause conflict with systems of thought. The text analyzes research versus theory through the Wundt-Titchener Laboratory example. Another paper addresses the status of dialectics in developmental psychology using the approach of theoretical orientation versus the scientific method. Part 2 presents research applications covering topics such as the phenomenological and a behavioral approach to remembering, as well as "remembering" in empiricism. Another paper addresses the dialectical perspectives of discriminative learning and transfer that includes both theory and research done on discriminative performance. This book will prove valuable for psychologists, behavioral therapists and researchers, and students in behavioral psychology.

By 2030 there will be about 70 million people in the United States who are older than 64. Approximately 26 percent of these will be racial and ethnic minorities. Overall, the older population will be more diverse and better educated than their earlier cohorts. The range of late-life outcomes is very dramatic with old age being a significantly different experience for financially secure and well-educated people than for poor and uneducated people. The early mission of behavioral science research focused on identifying problems of older adults, such as isolation, caregiving, and dementia. Today, the field of gerontology is more interdisciplinary. When I'm 64 examines how individual and social behavior play a role in understanding diverse outcomes in old age. It also explores the implications of an aging workforce on the economy. The book recommends that the National Institute on Aging focus its research support in social, personality, and life-span psychology in four areas: motivation and behavioral change; socioemotional influences on decision-making; the influence of social engagement on cognition; and the effects of stereotypes on self and others. When I'm 64 is a useful resource for policymakers, researchers and medical professionals.
