MATH-510: Topology. Topology is an important branch of mathematics that studies all the “qualitative” or “discrete” properties of continuous objects such as manifolds, i.e. all the properties that aren't changed by any continuous transformations except for the singular (infinitely extreme) ones. In this sense, topology is a vital arbiter in the “discrete vs continuous” wars.

Everything is so clear. You get a real sense for why a topological space is more general than a metric space. And when Simmons talks about groups, you begin to see why they're valuable and interesting, not just part of a system. Also it's what we in the world of high literature call "good wrote"--in other words, Simmons can write a sentence.
